Product Catalog
Mobile Hydraulics

Part 6: Compact Hydraulics:
Load Holding/Motion Control Valves, Compact Directional Valves, Compact Power Modules

The complete Mobile Hydraulics Catalog from Bosch Rexroth at a glance:

Part 1	Pumps	Axial Piston Pumps, External Gear Pumps, Electrohydraulic Pumps, Gerotor Pumps	RE 90010-01
Part 2	Motors, Gears	Axial Piston Motors, External Gear Motors, Radial Piston Motors, Gears	RE 90010-02
Part 3	Mobile Controls	Control Blocks, Valve Modules, Pilot Control Devices, Power Brake Valves	RE 90010-03
Part 4	Mobile Electronics, Accumulators, Filters	Controllers, Application Software, Tools, Sensors, Displays, Video Cameras, Accumulators, Filters, Oil Measurement Technology	RE 90010-04
Part 5	Compact Hydraulics	Mechanical, Solenoid and Proportional Cartridge Valves, Integrated Circuits	RE 90010-05
Part 6	Compact Hydraulics	Load Holding/Motion Control Valves, Compact Directional Valves, Compact Power Modules	RE 90010-06

Description

Flow is allowed to pass from V2 to C2 when pressure at V2 rises above the spring bias pressure and the poppet is pushed from its seat. The valve is normally closed (checked) from C2 to V2; when sufficient pilot pressure is present at V1-C1 the pilot piston acts to push the poppet from its seat and flow is allowed from C2 to V2. Precision machining and hardening processes allow virtually leak-free performance in the checked condition.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 l/min. (8 gpm)
Pilot ratio	7 : 1
Weight	0.68 kg (1.5 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
The version with O-Ring and heavier spring is generally recommended.	

Note: for applications outside these parameters, please consult us.

Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
The version with O-Ring and heavier spring is generally recommended.	

Note: for applications outside these parameters, please consult us.

Note: for applications outside these parameters, please consult us.

Description

Flow is allowed to pass from A to A1 when pressure at A rises above the spring bias pressure and the poppet is pushed from its seat. The valve is normally closed (checked) from A1 to A; when sufficient pilot pressure is present at B-B1 the pilot piston acts to push the poppet from its seat and flow is allowed from A1 to A. Precision machining and hardening processes allow virtually leak-free performance in the checked condition.

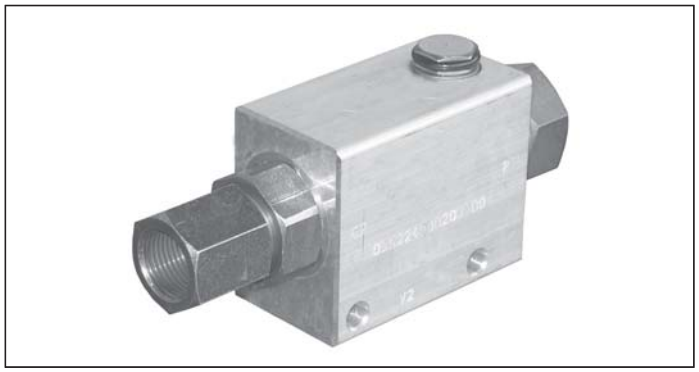
Bosch Rexroth Oil Control S.p.A., RE 18307-10/03.2016

Pilot operated check, single vented pilot piston

VSO-SE-PS

05.52.24 - X - Y - Z

RE 18307-11
Edition: 03.2016
Replaces: 04.2010



Description

Flow is allowed to pass from V2 to C2 when pressure at V2 rises above the spring bias pressure and the poppet is pushed from its seat. The valve is normally closed (checked) from C2 to V2; when sufficient pilot pressure is present at Pil the pilot piston acts to push the poppet from its seat and flow is allowed from C2 to V2. The pilot piston is vented and the pilot pressure required to push the poppet from its seat is independent from any back-pressure at V2 port.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 l/min. (8 gpm)
Pilot ratio	10 : 1
Weight	0.5 kg (1.1 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Whenever possible, it is recommended to remove the air bleed plug and to connect the port (G 1/8) to tank. The version with heavier spring is generally recommended.	

Note: for applications outside these parameters, please consult us.

Bosch Rexroth Oil Control S.p.A., RE 18307-11/03.2016

Pilot operated check, single manual shut-off

VSO-SE-DL-SX

05.52.26 - X - Y - Z

RE 18307-12
Edition: 03.2016
Replaces: 04.2010

Description

A tap, manually controlled by the operator, allows inlet flow from V2 to pass through the check valve to C2: as a result, the motion of the actuator (typically the extension and positioning of an outrigger) happens under the operator's direct sight. The valve is normally closed (checked) and virtually leak-free from C2 to V2 in order to prevent reverse motion. Flow outlet from C2 to V2 and reverse motion (i.e. outrigger retraction or lifting up) is possible with manual tap open and if sufficient pilot pressure is present at V1-C1 so that the pilot piston may push the poppet from its seat.

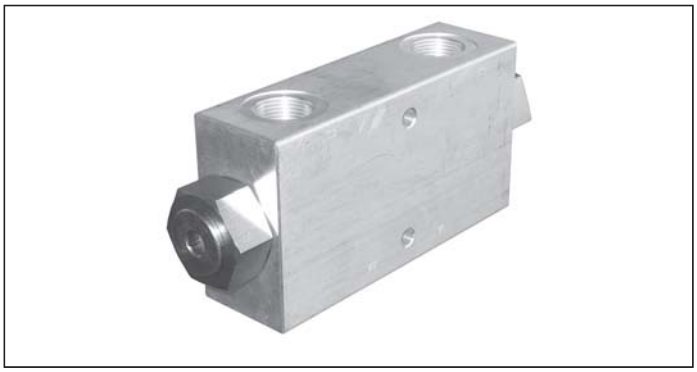
Bosch Rexroth Oil Control S.p.A., RE 18307-17/03.2016

Pilot operated check, dual

VSO-DE

05.53.01 - X - 04 - Z

RE 18307-18
Edition: 03.2016
Replaces: 04.2010



Description

Flow is allowed to pass in one direction (V1 to C1 or V2 to C2), then the valve remains closed (checked) in both reverse directions (C1 to V1 or C2 to V2) in order to hold and lock in position the cylinder or other actuators; reverse flow is possible only when sufficient pilot pressure is applied at V2 or V1, which act as cross connected pilot ports, and the pilot piston lifts the poppet from its seat overcoming cylinder port pressure.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	100 l/min. (26 gpm)
Pilot ratio	4 : 1
Weight	2.6 kg (5.7 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
The version with O-Ring and heavier spring is generally recommended.	

Note: for applications outside these parameters, please consult us.

RE 18307-34
Edition: 03.2016
Replaces: 04.2010

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated, differential area, relief function is activated and flow is relieved from C2 to V2. With pilot pressure at Pil, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions.

Technical data

Max. operating pressure	350 bar (5000 psi)
Max. flow	40 l/min. (11 gpm)
Weight	0.76 kg (1.68 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the load induced pressure.	

Note: for applications outside these parameters, please consult us.

Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	see performance graph
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Flange seal kit [1)]	E000000000000.. (R93000....)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the load induced pressure.	

Note: for applications outside these parameters, please consult us.

[1)] Seals for .. valves.

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated relief function is activated and flow is relieved from C2 to V2. With pilot pressure at V1-C1, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. For safety and compactness, the C2 port is gasket mounted the actuator.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.

Description

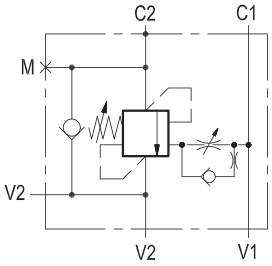
When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated relief function is activated and flow is relieved from C2 to V2. With pilot pressure at V1-C1, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. For safety and compactness, the C2 port is gasket mounted the actuator.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.



Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	150 l/min. (40 gpm)
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Flange seal kit [1)]	E00000000000057 (R930060587)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
MTTFd	150 years see data sheet 18350-51
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the load induced pressure.	
The pilot line includes adjustable hydraulic damping, for fine tuning of stability and response.	

Note: for applications outside these parameters, please consult us.

[1)] Seals for 10 valves.

Description

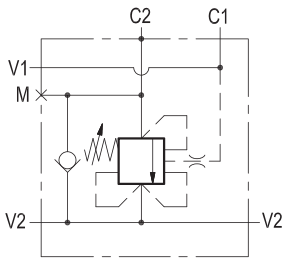
When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, flow is relieved from C2 to V2. With pilot pressure at V1–C1, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2. The valve applies a balanced piston and relief is operated at the valve setting independent of back-pressure at V2. However, the piloted opening of the valve remains subject to additive pressure at port V2. For safety and compactness, the C2 port is gasket mounted the actuator.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.



Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	60 l/min. (16 gpm)
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Flange seal kit [1)]	E00000000000056 (R930060579)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
MTTFd	150 years see data sheet 18350-51
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

[1)] Seals for 10 valves.

Description

When pressure at V2 rises above the spring bias pressure, the check valve poppet is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the relief function is activated and flow is relieved from C2 to V2. With pilot pressure at V1–C1, the pressure setting is reduced in proportion to the pilot ratio, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2. The valve applies a balanced piston allowing relief operation at the valve setting independent of back-pressure at V2. However, the piloted opening of the valve remains subject to additive pressure at port V2.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	see performance graph
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

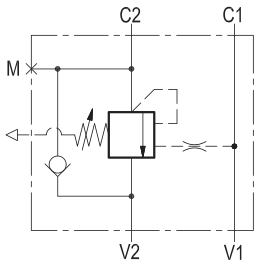
Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct-acting, differential area, relief function is activated and flow is relieved from C2 to V2. With pilot pressure at V1–C1 , the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is vented to atmosphere allowing operation of all functions independent of back-pressure at V2.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.



Technical data

Max. operating pressure	350 bar (5000 psi)
Max. flow	40 l/min. (11 gpm)
Weight	1.2 kg (2.6 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the load induced pressure.	
The pilot line includes adjustable hydraulic damping, for fine tuning of stability and response.	

Note: for applications outside these parameters, please consult us.

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the relief function is activated and flow is relieved from C2 to V2. With pilot pressure at V1–C1, the pressure setting is reduced in proportion to the pilot ratio, until opening and allowing flow from C2 to V2. The spring chamber is vented to atmosphere allowing operation of all functions independent of back-pressure at V2. For better safety and compact assembly, the C2 port is gasket mounted directly on the actuator.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.

Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	150 l/min. (40 gpm)
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Flange seal kit [1)]	E00000000000057 (R930060587)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
MTTFd	150 years see 18350-51
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	
The pilot line includes adjustable hydraulic damping, for fine tuning of stability and response.	

Note: for applications outside these parameters, please consult us.

[1)] Seals for 10 valves.

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the actuator, through ports C1 and C2. This valve module includes 2 sections, each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check section allows free flow into the actuator, then locks the load against reverse movement; with pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse flow. Back-pressure at V1 or V2 is additive to the pressure settings in all functions.

Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	60 l/min. (16 gpm)
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the actuator, through ports C1 and C2. This valve module includes 2 sections, each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check section allows free flow into the actuator, then holds the load against reverse movement; with pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse flow. Back-pressure at V1 or V2 is additive to the pressure setting in all functions.

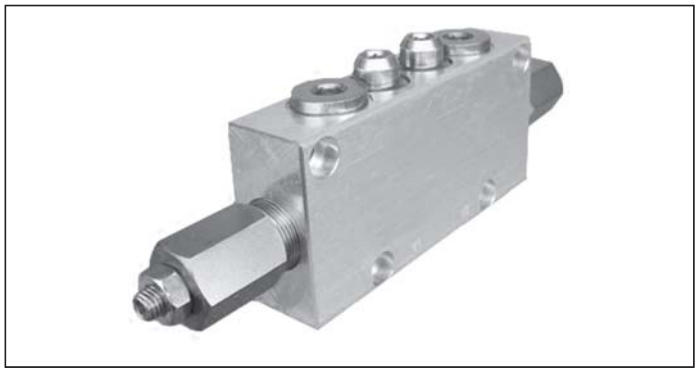
Bosch Rexroth Oil Control S.p.A., RE 18307-63/03.2016

Dual counterbalance

VBSO-DE-FC2

05.42.06 - X - Y - Z

RE 18307-64
Edition: 03.2016
Replaces: 04.2010



Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the actuator, through ports C1 and C2. This valve module includes 2 sections, each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check section allows free flow into the actuator, then holds the load against reverse movement; with pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse flow. Back-pressure at V1 or V2 is additive to the pressure setting in all functions. For better safety and compact assembly, the C1 and C2 ports are gasket mounted directly on the actuator.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	see performance graph
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Flange seal kit (03) [1]	E00000000000008 (R930004538)
Flange seal kit (04) [2]	E00000000000020 (R930000144)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm²/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the actuator, through ports C1 and C2. This valve module includes 2 sections, each one composed by a check and a relief valve with balanced piston, pilot assisted by pressure in the opposite line: the check section allows free flow into the actuator, then holds the load against reverse movement; with pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse flow. Relief operates at the valve setting independent of back-pressure, but the piloted opening remains subject to additive pressure at V1 or V2.

Edition: 03.2016
Replaces: 04.2010

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	see performance graph
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the actuator, through ports C1 and C2. This valve module includes 2 sections, each one composed by a check and a relief valve with balanced piston, pilot assisted by pressure in the opposite line: the check section allows free flow into the actuator, then holds the load against reverse movement; with pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse flow. Relief operates at the valve setting independent of back-pressure, but the piloted opening remains subject to additive pressure at V1 or V2.

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the cylinder, through ports C2 and C1. This valve module includes a pilot assisted counterbalance (1) on the line C2-V2 for control of the full bore side of the cylinder, a check valve between V1 and C1 which allows flow into the annular side and locks in reverse direction, a pilot assisted by-pass counterbalance “fully vented type” (2) which feeds into the full bore (C2) the flow coming out from the annular side (C1) in order to increase the extension speed. The valve (2) is internally vented into V1 which acts as “Tank” line during cylinder extension. The pilot line for the valve (2) has a controlled cross-over drain for hydraulic damping.

Bosch Rexroth Oil Control S.p.A., RE 18307-91/03.2016

Dual counterbalance, with regenerative function

VBSO-DE-CR-33

05.44.13 - X - Y - Z

RE 18307-92
Edition: 03.2016
Replaces: 11.2015

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the cylinder, through ports C2 and C1. This valve module includes a pilot assisted counterbalance (2) on the line C2-V2 for control of the full bore side of the cylinder, a check valve between V1 and C1 which allows flow into the annular side and locks in reverse direction, a pilot assisted by-pass counterbalance “fully vented type” (1) which feeds into the full bore (C2) the flow coming out from the annular side (C1) in order to increase the extension speed. The valve (1) is internally vented into V1 which acts as “Tank” line during cylinder extension. The pilot line for the valve (1) has a one way adjustable cross-over drain for hydraulic damping.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	100 l/min. (26 gpm)
Weight	2.6 kg (5.7 lbs)
Manifold material	Anodized aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

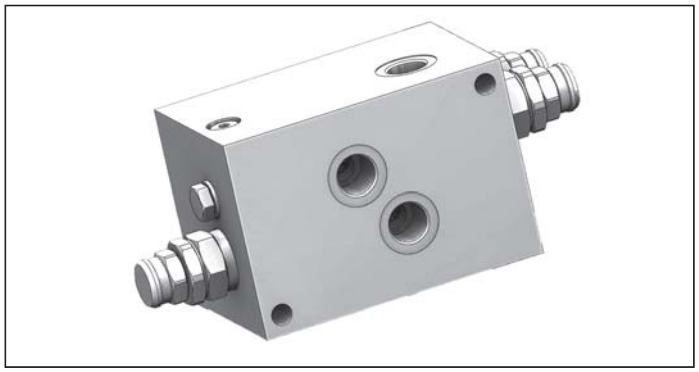
Bosch Rexroth Oil Control S.p.A., RE 18307-92/03.2016

Dual counterbalance with regenerative function, pressure sensitive

VBSO-DE-CR-EA-33 07.06.20.51

RE 18307-93
Edition: 03.2016
Replaces: 11.2015



Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the cylinder, through ports C2 and C1. This valve module includes a pilot assisted counterbalance (1) on the line C2-V2 for control of the full bore side of the cylinder, a one way pilot operated metering valve (2) between V1 and C1 which allows flow into the annular side and locks/controls flow in reverse direction, a pilot assisted by-pass counterbalance “fully vented type” (3) which provides the regenerative function by feeding into the full bore (C2) the flow coming out from the annular side (C1). The extension speed increment given by the regenerative function disappears when line pressure in V2 increases above the pressure threshold needed to pilot open valve (2).

Bosch Rexroth Oil Control S.p.A., RE 18307-93/03.2016

Dual counterbalance, with regenerative function solenoid controlled

VBSO-DE-CR-EE-33

05.44.81 - X - Y - Z

RE 18307-94
Edition: 03.2016
Replaces: 11.2015

Description

It provides static and dynamic control of load by regulating the flow IN and OUT of the cylinder, through ports C2 and C1. This valve module includes a pilot assisted counterbalance (2) on the line C2-V2 for control of the full bore side of the cylinder, a check valve between V1 and C1 which allows flow into the annular side and locks in reverse direction, a pilot assisted by-pass counterbalance “fully vented type” (1) which can feed into the full bore (C2) the flow coming out from the annular side (C1) in order to increase the extension speed. A normally open solenoid cartridge controls the by-pass flow from valve (1) and diverts it either to V1 (for low speed extension) or to C2 (high speed extension with regenerative mode).

[1] Seals for 10 valves

Description

It provides high speed cylinder extension at low pressure operation; the extension speed increment given by the regenerative function disappears when line pressure in V2 increases above the pressure threshold needed to pilot open valve (1) which diverts to tank the flow from the annular chamber. The pilot assisted by-pass counterbalance “fully vented type” valve (2) provides the regenerative function by feeding into the full bore (C2) the flow coming out from the annular side (C1). The by-pass valve (2) is piloted by V2 pressure and is internally vented into V1 which acts as “Tank” line during cylinder extension. For better safety and compact assembly, the C1 and C2 ports are gasket mounted directly on the actuator.

Dual cross over relief, direct acting

VSDI-30

05.16.03 - X - Y - Z

RE 18308-15
Edition: 03.2016
Replaces: 04.2010

Description

It relieves the inlet pressure from either one of the supply lines and it protects motors or hydraulic actuators from shocks or pressure surges induced by changes in direction or by sudden stops. The dual relief is of the cross over type, and exhausted oil is transferred to the other line (from V1 into V2 and vice-versa), without the necessity of a separate tank line: this feature also prevents cavitation when used in conjunction with closed centre directional valve.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 l/min. (8 gpm)
Weight	0.79 kg (1.74 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
For relief cartridge details, see RE 18318-23 (VS-30 041118X99Z)	
Each cartridge can be individually pressure set. For best protection, the valve should be fitted as close to the actuator as possible.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

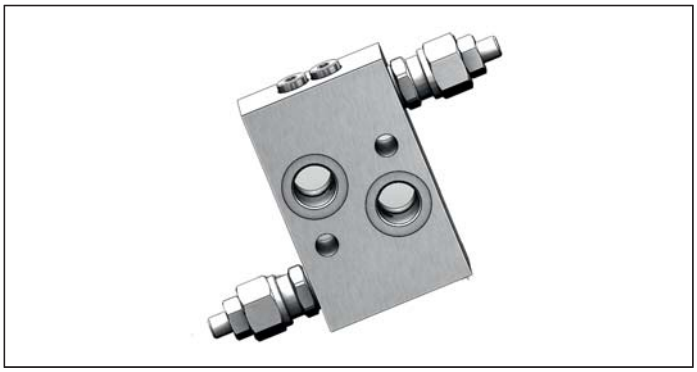
Bosch Rexroth Oil Control S.p.A., RE 18308-16/03.2016

Dual cross over relief, direct acting, flangeable to motor

VSDI-30-FM

05.16.17 - X - Y - Z

RE 18308-17
Edition: 03.2016
Replaces: 11.2015



Description

It relieves the inlet pressure from either one of the supply lines and it protects the motor from shocks or pressure surges induced by changes in direction or by sudden stops. The dual relief is of the cross over type, and exhausted oil is transferred to the other line (from V1 into V2 and vice-versa), without the necessity of a separate tank line: this feature also prevents cavitation when used in conjunction with closed centre directional valve.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 l/min. (8 gpm)
Weight	0.9 kg (1.98 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Flange seal kit [1]	E00000000000032 (R930005697)
Flangeable on SAUER-DANFOSS orbital motors OMS series	
For relief cartridge details, see RE 18318-23 (VS-30 041118X99Z)	
Each cartridge can be individually pressure set.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

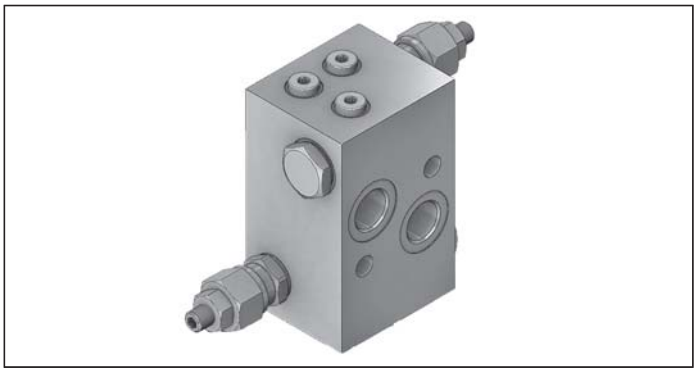
Bosch Rexroth Oil Control S.p.A., RE 18308-17/03.2016

Dual cross over relief, with anti-cavitation check valves, flangeable to motor

VSDI-VA-30-FM

05.16.48 - X - Y - Z

RE 18308-18
Edition: 03.2016
Replaces: 04.2010



Description

It relieves the inlet pressure from either one of the supply lines and it protects the motor from shocks or pressure surges induced by changes in direction or by sudden stops. The dual relief is of the cross over type, and exhausted oil is transferred to the other line (from V1 into V2 and vice-versa) to prevent cavitation. An extra tank port (T), with 2 checks, allows to make up for any drain or exhausted flow and ensures that the motor is always full.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 l/min. (8 gpm)
Weight	1.9 kg (4.2 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.

Bosch Rexroth Oil Control S.p.A., RE 18308-21/03.2016

Dual cross over relief, pilot operated with anti-cavitation check valves

A-VAA-CC-150

08.81.11 - X - Y - Z

RE 18308-24
Edition: 03.2016
Replaces: 04.2010

Description

It relieves the inlet pressure from either one of the supply lines and it protects motors or hydraulic actuators from shocks or pressure surges induced by changes in direction or by sudden stops. The relief is of the cross over type, and exhausted oil is transferred through the check valve to the low pressure line (from V1 into V2, or vice-versa) to prevent cavitation. An extra tank port (T), with 2 additional checks, allows to make up for any drain or exhausted flow and ensures that the motor is always full.

Technical data

Max. operating pressure	350 bar (5000 psi)
Max. flow	150 l/min. (40 gpm)
Leakage at max. relief setting	0.10 l/min. (0.03 gpm)
Weight	see “Dimensions”
Manifold material	Zinc plated steel
The pilot operated relief cartridge provides very “flat” curves up to the max flow.	
For best protection, the valve should be fitted as close to the actuator as possible.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

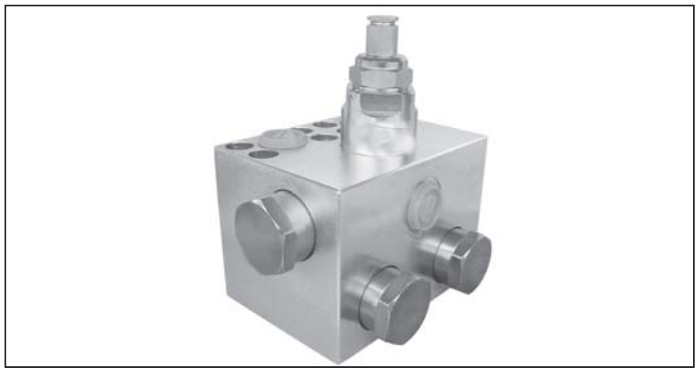
Bosch Rexroth Oil Control S.p.A., RE 18308-24/03.2016

Dual cross over relief, pilot operated, with anti-cavitation check valves, flangeable to motor

A-VAA-CC-42-FM

08.81.16 - X - Y - Z

RE 18308-25
Edition: 03.2016
Replaces: 04.2010



Description

It relieves the inlet pressure from either one of the supply lines and it protects motors or hydraulic actuators from shocks or pressure surges induced by changes in direction or by sudden stops. The relief is of the cross over type, and exhausted oil is transferred through the check valve to the low pressure line (from V1 into V2, or vice-versa) to prevent cavitation. An extra tank port (T), with 2 additional checks, allows to make up for any drain or exhausted flow and ensures that the motor is always full.

Technical data

Max. operating pressure	350 bar (5000 psi)
Max. flow	200 l/min. (53 gpm)
Weight	11.8 kg (26 lbs)
Manifold material	Zinc plated steel
Flange seal kit [1)]	E00000000000002 (R930004532)
Flangeable on REXROTH motors A2FE 45-56-63 series	
The direct acting relief cartridge has hydraulic damping and provides enhanced stability at all flows and pressures	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

08.37.69 - X - Y - Z

RE 18308-35
Edition: 03.2016
Replaces: 11.2015

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated, differential area, relief function is activated and flow is relieved from C2 to V2. With pilot pressure at Pil, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. Through port C3, an incorporated shuttle valve directs either Pil or V2 line pressure to the spring actuated brake for brake opening.

Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	150 l/min. (40 gpm)
The high pilot ratio (13:1) has been developed for energy saving; for higher stability at all flows and pressures, the pilot line includes hydraulic damping.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined also in order to achieve building-up of pilot pressure in Pil high enough to release the brake prior to any valve opening from C2 to V2.	
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
MTTFd	150 years see data sheet 18350-51
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Single counterbalance with brake release port for winches flangeable to motor

VBSO-SE-FA-30

05.45.70 - X - Y - Z

RE 18308-37
Edition: 03.2016
Replaces: 04.2010

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated, differential area, relief function is activated and flow is relieved from C2 to V2. With pilot pressure at Pil, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. Through port C3, an incorporated shuttle valve directs either V1 or V2 line pressure to the spring actuated brake for brake opening.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	60 l/min. (16 gpm)
Flangeable on SAUER-DANFOSS orbital motors OMP-OMR series.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined also in order to achieve building-up of pilot pressure in Pil high enough to release the brake prior to any valve opening from C2 to V2.	
Weight	1.13 kg (2.5 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Flange seal kit [1)]	E00000000000058 (R930060588)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Bosch Rexroth Oil Control S.p.A., RE 18308-39/03.2016

Single counterbalance with brake release port for winches flangeable to motor

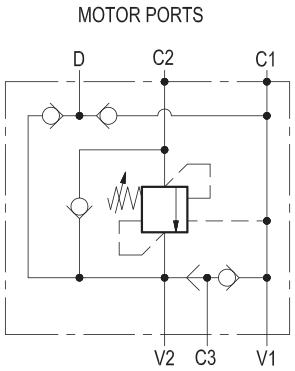
VBSO-SE-FA-RD-30

05.45.24 - X - Y - Z

RE 18308-40
Edition: 03.2016
Replaces: 04.2010

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated relief function is activated and flow is relieved from C2 to V2. With pilot pressure at V1-C1, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. Through port C3, an incorporated shuttle valve directs either V1 or V2 line pressure to the spring actuated brake for brake opening. Through port D, a twin check valve system recovers any oil drain from the motor and delivers it to either V1 or V2 line, depending on which one is open to tank.



Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	60 l/min. (16 gpm)
Flangeable on SAUER-DANFOSS orbital motors OMP-OMR series.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined also in order to achieve building-up of pilot pressure in V1 high enough to release the brake prior to any valve opening from C2 to V2.	
Weight	1.25 kg (2.8 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Flange seal kit [1)]	E00000000000058 (R930060588)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

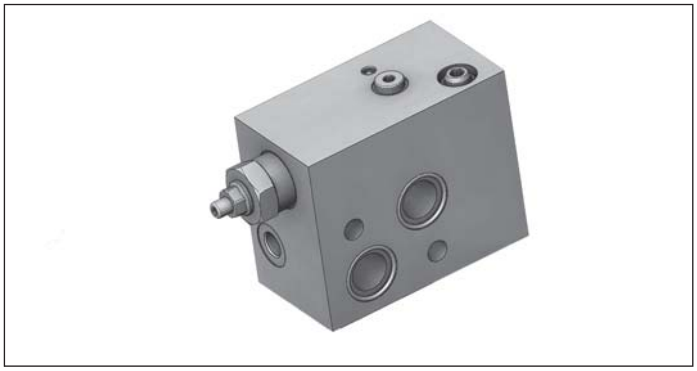
Bosch Rexroth Oil Control S.p.A., RE 18308-40/03.2016

Single counterbalance with brake release port for winches flangeable to motor

VBSO-SE-FA-RD-90

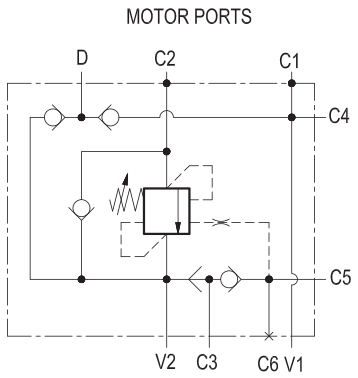
05.35.01 - X - Y - Z

RE 18308-41
Edition: 03.2016
Replaces: 04.2010



Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated relief function is activated and flow is relieved from C2 to V2. With pilot pressure at C5, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. Through port C3, an incorporated shuttle valve directs either V1 or V2 line pressure to the spring actuated brake for brake opening. Through port D, a twin check valve system recovers any oil drain from the motor and delivers it to either V1 or V2 line, depending on which one is open to tank.



Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	90 l/min. (24 gpm)
Flangeable on SAUER-DANFOSS orbital motors OMS-OMSW-OMSS series.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined also in order to achieve building-up of pilot pressure in V1 high enough to release the brake prior to any valve opening from C2 to V2.	
Weight	1.6 kg (3.5 lbs)
Manifold material	Anodized aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.

08.45.38 - X - Y - Z

RE 18308-42
Edition: 03.2016
Replaces: 12.2015

Description

When pressure at V2 rises above the spring bias pressure, the check seat is pushed away from the piston and flow is allowed from V2 to C2. When load pressure at C2 rises above the pressure setting, the direct operated, differential area, relief function is activated and flow is relieved from C2 to V2. With pilot pressure at P, the pressure setting is reduced in proportion to the stated ratio of the valve, until opening and allowing flow from C2 to V2. The spring chamber is drained to V2, and any back-pressure at V2 is additive to the pressure setting in all functions. Through port C3, an incorporated shuttle valve directs either P or V2 line pressure to the spring actuated brake for brake opening.

Technical data

Max. operating pressure	410 bar (5945 psi)
Max. flow	350 l/min. (93 gpm)
The high pilot ratio (13:1) has been developed for energy saving; for higher stability at all flows and pressures, the pilot line includes hydraulic damping.	
The C2 port is designed with “SAE flange” pattern in order to be gasket mounted directly to the motor.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined also in order to achieve building-up of pilot pressure in V1 high enough to release the brake prior to any valve opening from C2 to V2.

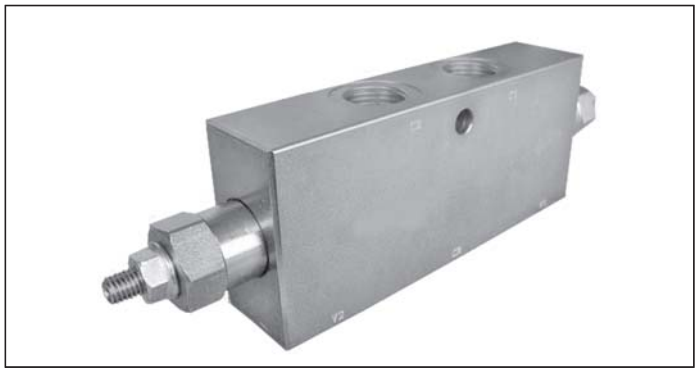
Dual counterbalance, with brake release port

A-VBSO-DE-VF-30

08.44.10 - X - Y - Z

RE 18308-53
Edition: 03.2016
Replaces: 04.2010



Description

It provides static and dynamic motion control by regulating the flow IN and OUT of the hydraulic motor, through ports C1 and C2. It includes 2 sections, each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check allows free flow into the motor, then locks and prevents reverse movement. With pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse motion. With motor turning and without pilot pressure, the relief function builds up back-pressure at the motor port in order to stop the motion. Back-pressure at V1 or V2 is additive to the pressure setting in all functions. Through port C3, a shuttle valve directs either V1 or V2 line pressure to the spring actuated brake for brake releasing.

Dual counterbalance with brake release port

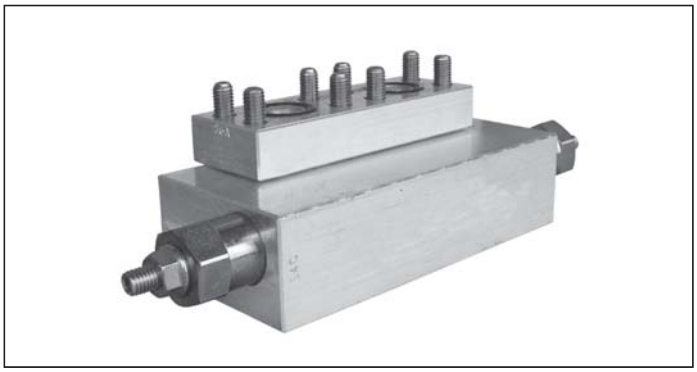
VBSO-DE-VF-30-FM

06.02.08.052

RE 18308-54
Edition: 03.2016
Replaces: 04.2010



Description

It provides static and dynamic motion control by regulating the flow IN and OUT of the hydraulic motor, through ports C1 and C2. It includes 2 sections, each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check allows free flow into the motor, then locks and prevents reverse movement. With pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse motion. With motor turning and without pilot pressure, the relief function builds up back-pressure at the motor port in order to stop the motion. Back-pressure at V1 or V2 is additive to the pressure setting in all functions. Through port C3, a shuttle valve directs either V1 or V2 line pressure to the spring actuated brake for brake releasing.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	60 l/min. (16 gpm)
Flangeable on REXROTH motors A2FE 28-32 series.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined in order to achieve building-up of pilot pressure in V1 or V2 high enough to release the brake prior to any valve opening.	
Weight	1.6 kg (3.5 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Flange seal kit [1)]	E00000000000020 (R930000144)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Bosch Rexroth Oil Control S.p.A., RE 18308-54/03.2016

Dual counterbalance with brake release port

VBSO-DE-VF-30-VSDI-FM

06.03.01 - X

RE 18308-55
Edition: 03.2016
Replaces: 04.2010

Description

It provides static and dynamic motion control by regulating the flow IN and OUT of the hydraulic motor, through ports C1 and C2. It includes 2 sections, each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check allows free flow into the motor, then locks and prevents reverse movement. With pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse motion. With motor turning and without pilot pressure, the relief function builds up back-pressure at the motor port in order to stop the motion. Back-pressure at V1 or V2 is additive to the pressure setting in all functions. Through port C3, a shuttle valve directs either V1 or V2 line pressure to the spring actuated brake for brake releasing.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	60 l/min. (16 gpm)
Flangeable on SAUER-DANFOSS orbital motors OMP-OMR series.	
Relief setting: at least 1.3 times the highest expected load. In addition, both the relief setting and the pilot ratio must be determined in order to achieve building-up of pilot pressure in V1 or V2 high enough to release the brake prior to any valve opening.	
Weight	1.6 kg (3.5 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

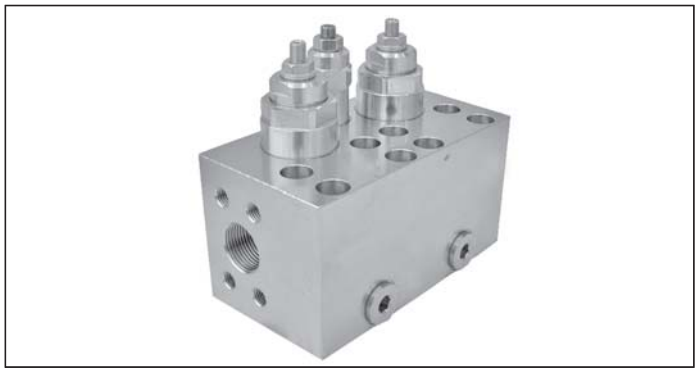
Bosch Rexroth Oil Control S.p.A., RE 18308-60/03.2016

Dual counterbalance with pressure reducer for brake release port

RE 18308-61
Edition: 03.2016
Replaces: 04.2010

A-VBSN-DE-VF-20A-FM

08.46.32 - X - Y - Z



Technical data

Max. operating pressure	350 bar (5000 psi)
Max. flow	320 l/min. (85 gpm)
Flangeable on REXROTH motors A2FE80-90 series.	
Relief setting of valves 1 and 2: at least 1.3 times the highest expected load.	
Weight	13.2 kg (29.1 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Description

It provides static and dynamic motion control by regulating flow and pressure IN and OUT of the hydraulic motor at ports C1 and C2. It includes 2 motion control sections (ref. 1 - 2), each one composed by a check and a relief valve pilot assisted by pressure in the opposite line: the check allows free flow into the motor, then locks and prevents reverse movement. With pilot pressure applied at the line across, the pressure setting of the relief is reduced in proportion to the stated ratio until opening and allowing controlled reverse motion. With motor turning and without pilot pressure, the relief function builds up back-pressure at the motor port in order to stop the motion. Back-pressure at V1 or V2 is additive to the pressure settings in all functions. A shuttle valve directs either V1 or V2 line pressure to reducer cartridge (3) and provides “low/constant” pressure for brake releasing through port BR.

VAA-B-SIC50-38

05.71.09 - X - 02 - Z

RE 18308-85
Edition: 03.2016
Replaces: 05.2013

Description

It provides static and dynamic motion control by regulating flow and pressure IN and OUT of the hydraulic motor at ports C1 and C2. When installed close to the motor, it can stop runaway in case of hose failure. The check sections allow free flow into the motor and prevent reverse movement; the pilot assisted relief valves control the movement when pilot pressure is applied. A system of check valves allows cross line relief; an optional make-up port (T) allows to compensate for any volume change.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	40 l/min. (11 gpm)
Weight	2.8 kg (6.2 psi)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

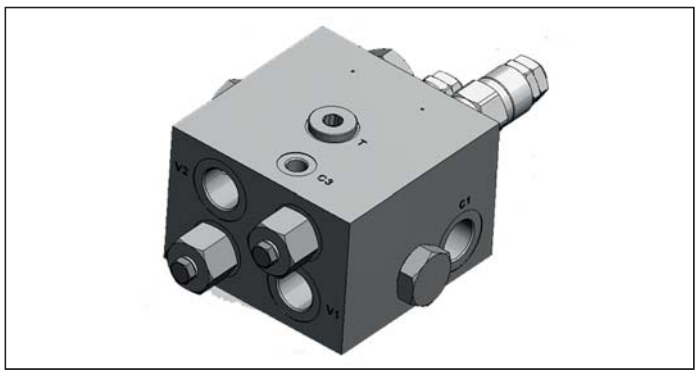
Bosch Rexroth Oil Control S.p.A., RE 18308-75/03.2016

Motion control
with brake release port

VAA-B-SICN-ST-VF-150

05.71.45 - X - 04 - Z

RE 18308-76
Edition: 03.2016
Replaces: 07.2012



Description

It provides static and dynamic motion control by regulating flow and pressure IN and OUT of the hydraulic motor at ports C1 and C2. When installed close to the motor, it can stop runaway in case of hose failure. The check sections allow free flow into the motor and prevent reverse movement; the pilot assisted relief valves control the movement when pilot pressure is applied. A system of check valves allows cross line relief; an optional make-up port (T) allows to compensate for any volume change. Through port C3, a shuttle valve directs either V1 or V2 pressure to the spring actuated brake for brake releasing.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	120 l/min. (32 gpm)
Weight	5.6 kg (12.3 psi)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	

Note: for applications outside these parameters, please consult us.

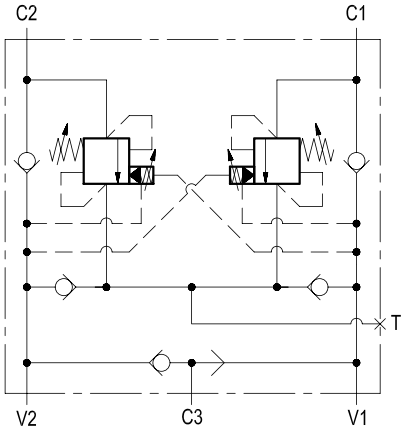
It provides static and dynamic motion control by regulating flow and pressure IN and OUT of the hydraulic motor at ports C1 and C2. When installed close to the motor, it can stop runaway in case of hose failure. The check sections allow free flow into the motor and prevent reverse movement; the pilot assisted relief valves control the movement when pilot pressure is applied. The relief valves operate with 2-levels pressure setting, both adjustable: higher setting when flow is delivered to the motor, and lower setting when flow is discharged by the motor during stopping. A system of check valves allows cross line relief and an optional make-up port (T) allows to compensate for any volume change. Through port C3, a shuttle valve directs either V1 or V2 pressure to the spring actuated brake for brake releasing.



Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	200 l/min. (53 gpm)
Weight	11 kg (24 psi)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load. The lower pressure setting (see table “SPRINGS”) refers to flow “C1” to “C2” (or “C2” to “C1”), and is adjustable through register “A” (see the drawing).	

Note: for applications outside these parameters, please consult us.

Description

When pressure at V2 rises above the check spring bias pressure, the check seat is pushed open and upstream flow is allowed from V2 to C2. Reverse flow (C2 - V2) is locked, in a leak free mode, by valve (1). Downstream flow (C2 - V2) is possible when Pil pressure rises above the bias pressure of the valve (1) spring. The back-pressure at V2 is directly additive to the spring and tends to close the control plunger: it restricts the flow area and it increases the pressure drop through valve (1). If Pil pressure is limited and kept constant, also back-pressure at V2 will remain constant, and downstream flow (C2 - V2) will stay constant, controlled only by the Main Control Valve opening (V2 to T), independently from the load (C2 pressure). The result is easier and better control during lowering. The leak free pressure relief valve (2) senses C2 pressure and opens under overload or shock conditions.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.

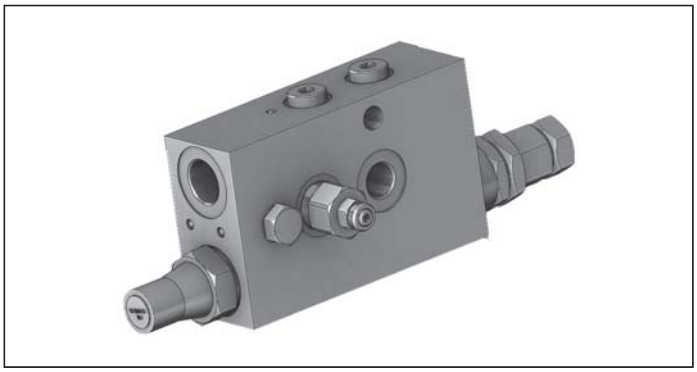
Check and metering valve

A-VBC-78-DX

08.49.29 - X - Y - Z

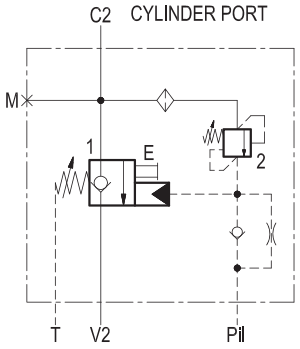
RE 18309-01
Edition: 03.2016
Replaces: 07.2012



Description

Upstream flow (V2 - C2) to the cylinder is free through a check valve, and reverse flow (C2 - V2) is locked/metered by a leak free spool (1) which provides fine metering in the initial opening stroke. The spool, normally held closed by an adjustable spring force, is remotely controlled by joystick pilot pressure; the pilot pressure required to move the spool is load independent because the spring is vented to Tank. The valve includes a small relief cartridge (2) which senses C2 pressure and opens under overload or shock conditions in order to pilot wide open the metering spool and to allow cylinder pressure to be relieved downstream through the main hose (V2) and through the main control valve.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.



Technical data

Max. operating pressure	420 bar (6000 psi)
Max. flow	40 l/min. (11 gpm)
Weight	1.88 kg (4.1 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
This valve is designed to be pipe mounted on boom cylinders of hydraulic excavators, and, with specific adjustments, it can become part of load holding and load lowering systems designed to comply with ISO Standard 8643 (hose burst protection).	
Note: the Tank vented port must be connected to a “low pressure tank line” (to the joystick tank line, or to tank directly).	
The Factory sealed “E” screw can be used for Emergency spool opening and boom lowering, in case of pilot pressure failure; once the emergency boom lowering is completed, the “E” screw must be restored to its original position and locked.	
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

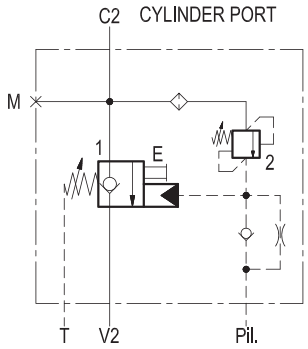
Upstream flow (V2 - C2) to the cylinder is free through a check valve, and reverse flow (C2 - V2) is locked/metered by a leak free spool (1) which provides fine metering in the initial opening stroke. The spool, normally held closed by an adjustable spring force, is remotely controlled by joystick pilot pressure; the pilot pressure required to move the spool is load independent because the spring is vented to Tank. The valve includes a small relief cartridge (2) which senses C2 pressure and opens under overload or shock conditions in order to pilot wide open the metering spool and to allow cylinder pressure to be relieved downstream through the main hose (V2) and through the main control valve.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.



Technical data

Max. operating pressure	420 bar (6000 psi)
Max. flow	100 l/min. (26 gpm)
Weight	2.4 kg (5.3 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
This valve is designed to be pipe mounted on boom cylinders of hydraulic excavators, and, with specific adjustments, it can become part of load holding and load lowering systems designed to comply with ISO Standard 8643 (hose burst protection).	
Note: the Tank vented port must be connected to a “low pressure tank line” (to the joystick tank line, or to tank directly).	
The Factory sealed “E” screw can be used for Emergency spool opening and boom lowering, in case of pilot pressure failure; once the emergency boom lowering is completed, the “E” screw must be restored to its original position and locked.	
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

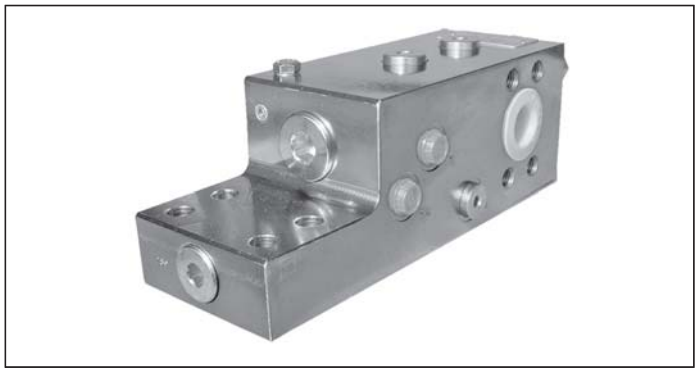
Bosch Rexroth Oil Control S.p.A., RE 18309-10/03.2016

Check and metering valve flangeable

A-VBC-42-FC

08.47.85 - X - 73 - Z

RE 18309-11
Edition: 03.2016
Replaces: 07.2011



Description

Upstream flow (V2 - C2) to the cylinder is free through a check valve, and reverse flow (C2 - V2) is locked/metered by a leak free spool (1) which provides fine metering in the initial opening stroke. The spool, normally held closed by an adjustable spring force, is remotely controlled by joy-stick pilot pressure; the pilot pressure required to move the spool is load independent because the spring is vented to Tank. The valve includes a small relief cartridge (2) which senses C2 pressure and opens under overload or shock conditions in order to pilot wide open the metering spool and to allow cylinder pressure to be relieved downstream through the main hose (V2) and through the main control valve. For better safety and compact assembly, the C2 port is gasket mounted directly on the actuator.

Technical data

Max. operating pressure	420 bar (6000 psi)
Max. flow	400 l/min. (106 gpm)
Weight	12 kg (26.5 lbs)
Flange seal kit [1)]	E00000000000003 (R930004533)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
This valve is designed to be pipe mounted on boom cylinders of hydraulic excavators, and, with specific adjustments, it can become part of load holding and load lowering systems designed to comply with ISO Standard 8643 (hose burst protection).	
Note: the Tank vented port must be connected to a “low pressure tank line” (to the joystick tank line, or to tank directly).	
The restricted “E” port must be connected to a “pressure equalizing line” in case of 2 valves fitted to 2 twin cylinders, and may be used as “outlet to tank” for emergency boom lowering in case of pilot pressure failure.	
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

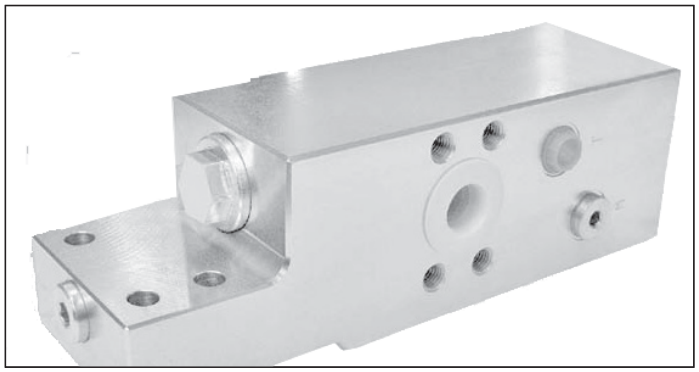
Bosch Rexroth Oil Control S.p.A., RE 18309-12/03.2016

Check and metering valve flangeable

A-VBCN-15-FC

08.35.23.07 - Y - Z

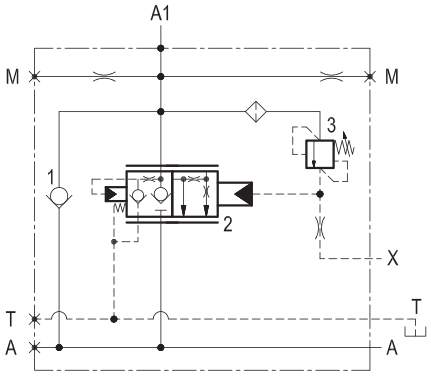
RE 18309-13
Edition: 03.2016
Replaces: 07.2012



Description

Unrestricted upstream flow (A – A1) to the cylinder is possible through the check valve (1), while downstream flow (A1 – A) is locked by the leak free main spool (2) which is held closed by the spring and by the load induced pressure. With pilot pressure at X (joystick), the spool (2) is first vented to tank then it is remotely controlled and it slides to provide metering for the downstream flow; after the initial venting, the pilot pressure required to move the spool is load independent. The downstream (A1 – A) metering curve and the cracking pressure are factory designed and set for the specific type of machine and cannot be adjusted. The valve includes a small relief cartridge (3) which senses the A1 pressure (load induced) and opens under overload or shock conditions in order to pilot fully open the main spool (2): this allows any excess of pressure at A1 to be relieved downstream through A. For better safety and compact assembly, the A1 port is gasket mounted directly on the actuator.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.



Technical data

Max. operating pressure	420 bar (6000 psi)
Max. flow	200 /min. (53 gpm)
Weight	10 kg (22 lbs)
Flange seal kit [1]	E00000000000002 (R930004532)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
MTTFd	150 years
The Tank vented port must be connected to a “low pressure tank line” (to the joystick tank line, or to tank directly).	
The restricted “M” port must be connected to a “pressure equalizing line” in case of 2 valves fitted to 2 twin cylinders, and may be used as “outlet to tank” for emergency boom lowering in case of pilot pressure failure.	
This valve with specific adjustments, it can become part of load holding and load lowering systems designed to comply with ISO Standard 8643 (hose burst protection).

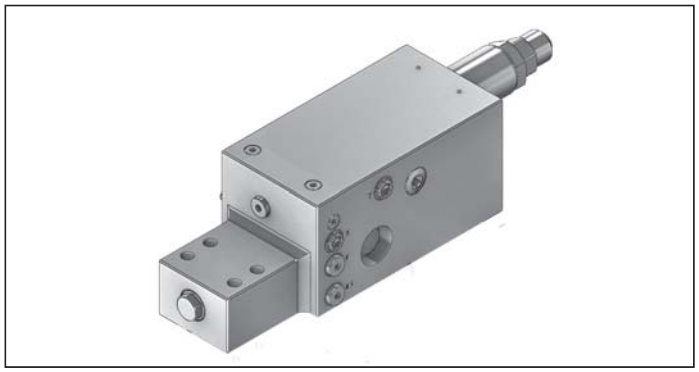
Bosch Rexroth Oil Control S.p.A., RE 18309-16/03.2016

Check and metering valve flangeable

A-VBCN-22-DX-RE-FC

08.39.38 - X - Y - Z

RE 18309-18
Edition: 03.2016
Replaces: 07.2012



Description
Unrestricted upstream flow (A – A1) to the cylinder is possible through the check valve (3), while downstream flow (A1 – A ,or A1 – B) is locked by the leak free main spool (1) which is held closed by the spring and by the load induced pressure. With pilot pressure at X (joystick), the spool (1) is first vented to tank then it is remotely controlled and it slides to provide fine metering for the downstream flow; after the initial venting, the pilot pressure required to move the spool is load independent. The return flow (A1 – A) is slightly pressurized by the check valve (4) and is available to re-fill the opposite end of the cylinder through the check valve (5) and port (B), in order to prevent cavitation. The valve includes a small relief cartridge (2) which senses the A1 pressure (load induced) and opens under overload or shock conditions in order to pilot fully open the main spool (1): this allows any excess of pressure at A1 to be relieved downstream through A. For better safety and compact assembly, the A1 port is flanged (gasket mounted) directly on the actuator.

Technical data

Max. operating pressure	420 bar (6000 psi)
Max. flow	400 /min. (106 gpm)
Weight	26 kg (57.3 lbs)
Flange seal kit [1)]	E00000000000003 (R930004533)

Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
The Tank vented port must be connected to a “low pressure tank line” (to the joystick tank line, or to tank directly).	
The restricted “M” port must be connected to a “pressure equalizing line” in case of 2 valves fitted to 2 twin cylinders, and may be used as “outlet to tank” for emergency boom lowering in case of pilot pressure failure.	
This valve with specific adjustments, it can become part of load holding and load lowering systems designed to comply with ISO Standard 8643 (hose burst protection).	
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

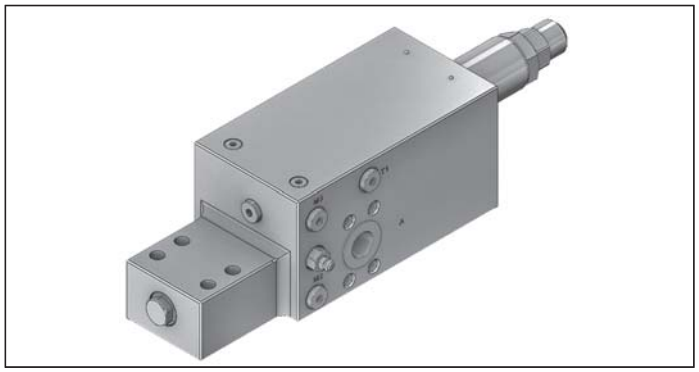
Bosch Rexroth Oil Control S.p.A., RE 18309-18/03.2016

Check and metering valve flangeable

A-VBCN-22-SX-RE-FC

08.39.37 - X - Y - Z

RE 18309-17
Edition: 03.2016
Replaces: 07.2012



Description

Unrestricted upstream flow (A – A1) to the cylinder is possible through the check valve (3), while downstream flow (A1 – A ,or A1 – B) is locked by the leak free main spool (1) which is held closed by the spring and by the load induced pressure. With pilot pressure at X (joystick), the spool (1) is first vented to tank then it is remotely controlled and it slides to provide fine metering for the downstream flow; after the initial venting, the pilot pressure required to move the spool is load independent. The return flow (A1 – A) is slightly pressurized by the check valve (4) and is available to re-fill the opposite end of the cylinder through the check valve (5) and port (B), in order to prevent cavitation. The valve includes a small relief cartridge (2) which senses the A1 pressure (load induced) and opens under overload or shock conditions in order to pilot fully open the main spool (1): this allows any excess of pressure at A1 to be relieved downstream through A. For better safety and compact assembly, the A1 port is flanged (gasket mounted) directly on the actuator.

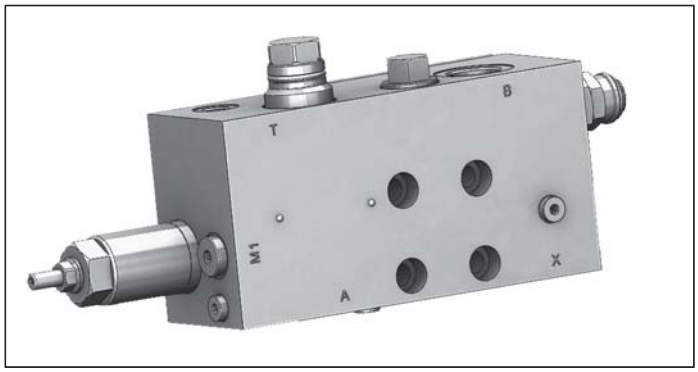
Bosch Rexroth Oil Control S.p.A., RE 18309-17/03.2016

Control Plus check and metering valve flangeable

RE 18308-99
Edition: 01.2016

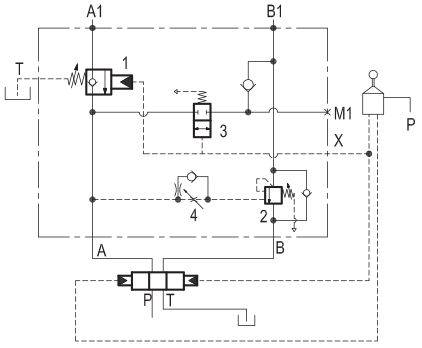
A-VBC14-FC2

08.39.90 - X - Y - Z



Description

The flow (A – A1) to the cylinder for lifting the boom is free through the check valve and reverse flow (A1 – A) is locked / metered by a leak-free spool (1) which provides quick response and very fine control. The spool, normally held closed by an adjustable spring force, is remotely controlled by joystick pilot pressure at port X; the low pilot pressure required to move the spool is load independent because valve (1) is not sensitive to load pressure and the spring is vented to tank (T). The valve includes a joystick-actuated by-pass (3), open while lowering, which ensures that the cylinder rod side is always re-filled in order to avoid cavitation effects. As a result, it is possible to get maximum lowering speed also when the pump is idling (gravity lowering) and the boom and the forks are always ready to push further downwards also after boom touchdown. A cross-piloted counterbalance valve (2) controls the boom cylinder rod side and prevents inadvertent movements due to the pulling effect of the compensator cylinder (anti-kick function). For better safety and compact assembly, the A1 and B1 ports are gasket mounted directly on the cylinder.



Technical data

Max. operating pressure	350 bar (5000 psi)
Max. flow	150 l/min. (40 gpm)
Weight	9.6 kg (21.2 lbs)
Manifold material	Zinc plated steel
Flange seal kit [1)]	E00000000000035 (R930004539)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50
Relief setting: at least 1.3 times the highest expected load.	
The tank vented port must be connected to a “low pressure tank line” (to the joystick tank line, or to tank directly).	

Note: for applications outside these parameters, please consult us.

VRFC2

0M.22.03 - X - 97

RE 18309-32
Edition: 03.2016
Replaces: 04.2010

Description

A constant flow rate, regardless of system pressures, is established from E to R, while a minimum pressure differential of approximately 5 bar (70 psi) exists between the two ports. Output flow can be varied from zero (closed) to the nominal maximum rating. Reverse flow from R to E is limited by the selected opening of the restrictor and is not pressure compensated.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Q= max. inlet flow “E” port 20 l/min. (5 gpm)	
Flow range adjustment	0 - 3 turns
Weight	0.5 kg (1.1 lbs)
Manifold material	A luminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Bosch Rexroth Oil Control S.p.A., RE 18309-34/03.2016

Flow regulator
2 way, pressure compensated

A-VRFC2

0M.B2.03 - X - Y

RE 18309-35
Edition: 03.2016
Replaces: 04.2010

Description

A constant flow rate, regardless of system pressures, is established from E to R, while a minimum pressure differential of approximately 5 bar (70 psi) exists between the two ports. Output flow can be varied from zero (closed) to the nominal maximum rating. Reverse flow from R to E is limited by the selected opening of the restrictor and is not pressure compensated.

Technical data

Max. operating pressure	350 bar (5000 psi)
Q= max. inlet flow “E” port (see “Dimensions”)	
Flow range adjustment	0 - 3 turns
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Bosch Rexroth Oil Control S.p.A., RE 18309-35/03.2016

Flow regulator
2 way, pressure compensated
with check valve for free reverse flow

VRFC2-VU

0M.24.03 - X - Y

RE 18309-36
Edition: 03.2016
Replaces: 04.2010

Description

A constant flow rate, regardless of system pressures, is established from E to R, while a minimum pressure differential of approximately 5 bar (70 psi) exists between the two ports. Output flow can be varied from zero (closed) to the nominal maximum rating. Free flow is permitted from R to E, regardless of valve adjustment, when pressure overcomes the spring bias of the check valve.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Q= max. inlet flow “E” port (see “Dimensions”)	
Flow range adjustment	0 - 3 turns
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Bosch Rexroth Oil Control S.p.A., RE 18309-36/03.2016

Flow regulator
3 way, pressure compensated

VRFC3

0M.32.03 - X - 97

RE 18309-37
Edition: 03.2016
Replaces: 04.2010

Description

A constant flow rate, regardless of system pressures, is established from E to R, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. Input flow supplied to E in excess of the regulated output at R is by-passed to T. Output flow can be varied from closed to the nominal maximum rating for the valve. Reverse flow from R to E is limited by the selected opening of the restrictor and is not pressure compensated. Flow from T to E or from T to R is not possible. Increasing or decreasing inlet flow may cause slight increase or decrease of Regulated flow.

Technical data

Operating pressure	up to 210 bar (3000 psi)
QE= max. inlet flow “E” port 40 l/min. (11 gpm)	
QR= max. regulated flow “R” port 25 l/min. (7 gpm)	
Flow range adjustment	0 - 3 turns
Weight	0.55 kg (1.21 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Bosch Rexroth Oil Control S.p.A., RE 18309-39/03.2016

Flow regulator
3 way, pressure compensated

VRFC3-L

0M.32.03.50 - Y

RE 18309-40
Edition: 03.2016
Replaces: 04.2010

Description

A constant flow rate, regardless of system pressures, is established from E to R, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. Input flow supplied to E in excess of the regulated output at R is by-passed to T. Output flow can be varied from closed to the nominal maximum rating for the valve. Reverse flow from R to E is limited by the selected opening of the restrictor and is not pressure compensated. Flow from T to E or from T to R is not possible. Increasing or decreasing inlet flow may cause slight increase or decrease of Regulated flow.

Technical data

Operating pressure	up to 210 bar (3000 psi)
QE= max. inlet flow “E” port (see “Dimensions”)	
QR= max. regulated flow “R” port (see “Dimensions”)	
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm²/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

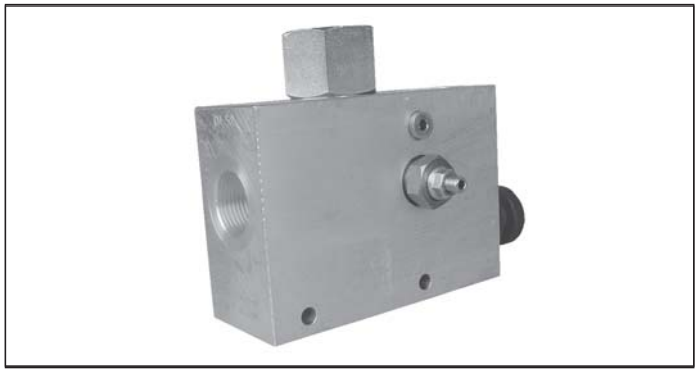
Bosch Rexroth Oil Control S.p.A., RE 18309-44/03.2016

Flow regulator
3 way, pressure compensated with relief

VRFC3-VS

0M.33.03 - X - Y

RE 18309-45
Edition: 03.2016
Replaces: 04.2010



Description

A constant pressure compensated flow rate is established from E to R, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. Input flow supplied to E in excess of the regulated output at R is by-passed to T. Output flow can be varied from closed to the nominal maximum rating for the valve. The valve module includes a small pilot relief cartridge which senses the pressure of the Regulated flow and diverts it to tank if the maximum allowed pressure is reached. Reverse flow from R to E is limited by the selected opening of the restrictor and is not pressure compensated. Flow from T to E or from T to R is not permitted.

Technical data

Max. pressure	210 bar (3000 psi)
Adj. relief valve: range 35-210 bar (500-3000 psi) Standard setting: 210 bar (3000 psi)	
QE= max. inlet flow “E” port (see “Dimensions”)	
QR= max. regulated flow “R” port (see “Dimensions”	
Flow range adjustment	0 - 3 turns
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)

Bosch Rexroth Oil Control S.p.A., RE 18309-45/03.2016

Flow regulator
3 way, pressure compensated with relief

VRFC3-VS

0M.33.03.50 - Y

RE 18309-46
Edition: 03.2016
Replaces: 04.2010

Description

A constant pressure compensated flow rate is established from E to R, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. Input flow supplied to E in excess of the regulated output at R is by-passed to T. Output flow can be varied from zero (Closed) to the nominal maximum rating for the valve (Open). The valve module includes a small pilot relief cartridge which senses the pressure of the Regulated flow and diverts it to tank if the maximum allowed pressure is reached. Reverse flow from R to E is limited by the selected opening of the lever controlled restrictor and is not pressure compensated. Flow from T to E or from T to R is not permitted.

Technical data

Operating pressure	210 bar (3000 psi)
Adj. relief valve: range 35-210 bar (500-3000 psi) Standard setting: 210 bar (3000 psi)	
QE= max. inlet flow “E” port (see “Dimensions”)	
QR= max. regulated flow “R” port (see “Dimensions”)	
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Flow regulator
3 way, pressure compensated with relief and solenoid control

VRFC3-VS-VEI

0M.36.03 - X - Y

RE 18309-47
Edition: 03.2016
Replaces: 04.2010

Description

A constant pressure compensated flow rate is established from E to R, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. Input flow supplied to E in excess of the regulated output at R is by-passed to T. Output flow can be varied from closed to the nominal maximum rating of the valve and it can be dumped to Tank in two ways: 1) by a N.O. solenoid cartridge which determines Regulated flow dumping when de-energized; 2) by a pilot relief cartridge which determines Regulated flow dumping if the maximum allowed pressure is reached. Reverse flow from R to E is limited by the selected opening of the restrictor and is not pressure compensated. Flow from T to E or from T to R is not permitted.

Technical data

Operating pressure	210 bar (3000 psi)
Adj. relief valve: range 35-210 bar (500-3000 psi) Standard setting: 210 bar (3000 psi)	
QE= max. inlet flow “E” port (see “Dimensions”)	
QR= max. regulated flow “R” port (see “Dimensions”)	
Flow range adjustment	0 - 3 turns
Pressure drop from E-T: cracking pressure 6 bar (90 psi), full flow 12 bar (175 psi)	
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-20 °C to 80 (-4 to 176 °F)
Viscosity range	20 to 380 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
The coil must be ordered separately	
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Description

A constant priority flow, regardless of system pressures, is established from E to P, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. While the regulated priority flow from P is used in the priority circuit, the flow supplied to E in excess of priority is by-passed to B port and can be sent to power other actuators. Priority flow can be varied from closed to the nominal maximum rating of the valve. Reverse flow from P to E is limited by the selected opening of the restrictor and is not pressure compensated. Reverse flow from B is not permitted.

Technical data

Operating pressure	up to 210 bar (3000 psi)
QE= max. inlet flow “E” port (see “Dimensions”)	
QP= max. priority flow “P” port (see “Dimensions”	
Flow range adjustment	0 - 3 turns

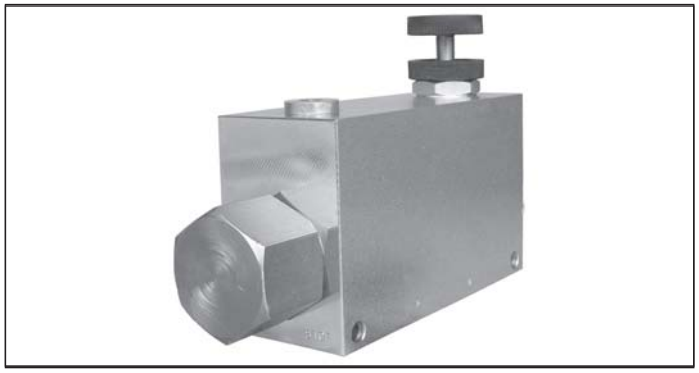
Bosch Rexroth Oil Control S.p.A., RE 18309-50/03.2016

Flow regulator
3 way, combination type
pressure compensated

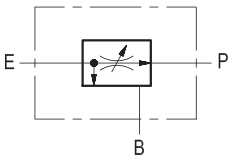
A-VRFC3C 0M.D2.03 - X - Y

RE 18309-51
Edition: 03.2016
Replaces: 04.2010



Description

A constant priority flow, regardless of system pressures, is established from E to P, while a minimum pressure differential of appr. 5 bar (70 psi) exists between the two ports. While the regulated priority flow from P is used in the priority circuit, the flow supplied to E in excess of priority is by-passed to B port and can be sent to power other actuators. Priority flow can be varied from closed to the nominal maximum rating of the valve. Reverse flow from P to E is limited by the selected opening of the restrictor and is not pressure compensated. Reverse flow from B is not permitted.



Technical data

Max operating pressure	350 bar (5000 psi)
QE= max. inlet flow “E” port (see “Dimensions”)	
QP= max. regulated flow “P” port (see “Dimensions”)	
Flow range adjustment	0 - 3 turns
Weight	see “Dimensions”
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Description

The flow control valves series “A-VRFC3C-VEI-VS” are 3 way, with one inlet “P” and two outlets “A” and “B”, the first outlet “A” being priority, pressure compensated type, with pressure relief valve and available on demand through a solenoid cartridge; the second outlet “B” is the by-pass for all flow in excess of what demanded by priority. Both flows from “A” and “B” ports can be employed to power different functions of the machine. These valves provide a simple and efficient way to power hydraulic tools (such as hydraulic hammers) from the existing hydraulic system, without any need to modify the directional control valve.
They allow the simultaneous operations, independently from the respective working pressures, of both the hydraulic actuator powered by the priority outlet “A”, and of the normal functions of the machine (traction, slewing, cylinder motions, etc.) supplied by the main directional valve through the by-pass outlet “B”.

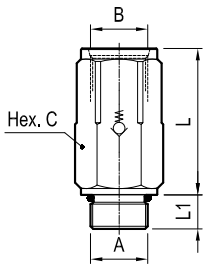
Fitting and connections

When positioning and tightening the valve, avoid any deflection of the body which could prevent the internal spool from sliding freely and impair the metering performance; it is recommended to use the 3 available fixation holes as locating points and to fit 3 equal spacers (metal washers), one on each point, between the valve body and the supporting structure.
Connections to the hydraulic system:

- Port “P” (inlet) to the main line from the pump.
- Port “A” (priority outlet) to the line feeding the hydraulic hammer, or the attachment. Important: for the correct metering of the compensating spool the priority outlet shall be always pressurized, with a back-pressure of at least 8-9 bar (115-130 psi); if necessary, fit a check valve with the needed cracking pressure.
- Port “B” (by-pass, or excess flow outlet) to the line delivering the oil to the main directional valve.
- Port “T” to a tank line. It is absolutely necessary that port “T” is connected to a low pressure tank line, 1-1.5 bar max (15-22 psi max).

Sleeve type check valves



Port sizes A - B	Cracking pressure bar (psi)	Dimensions mm (inches)			Ordering code
		C	L	L1	
G 1/2	8 (115)	30 (1.18)	57 (2.24)	14 (0.55)	043117000301000 R930000444

G 1	8 (115)	46 (1.81)	82 (3.23)	18 (0.71)	043117000501000 R930000446
G 1 1/4	8 (115)	55 (2.17)	102 (4.02)	20 (0.79)	043117000601000 R930000447

Adjustment of priority flow

The volume of priority flow from port “A” can be easily modified by turning the screw (1): the flow increases by turning the screw clockwise and, once adjusted to the desired level, it remains constant independently from the working pressure.

Adjustment of maximum priority pressure

The maximum pressure in the priority line “A” can be adjusted by turning the screw (5) of the small relief cartridge (6) which controls the maximum pressure in the chamber (3): when this “pilot” cartridge opens, the pressure in chamber (3) drops and the priority flow is stopped. Note: the relief cartridge (6) controls only the maximum pressure in the priority outlet “A”, and does not control the pressure in the by-pass and main line: the main line must be protected by another relief valve, capable to discharge the full oil flow.

Bosch Rexroth Oil Control S.p.A., RE 18309-53/06.2010

5-Way heavy duty flow control, with pressure compensated and solenoid controlled priority flow, for two pumps systems

A-VRFC3C-VEI-VS

0M.43.12.80 - Y - Z

RE 18309-54
Edition: 03.2016
Replaces: 04.2010

Description

The flow control valves code 0M.43.12.80 are 3 way, with two separate inlets P1 and P2 and three outlets “A” and “B1” and “B2”, the first outlet “A” being priority, pressure compensated type, with pressure relief valve, and available on demand through a solenoid cartridge; the second and third outlets “B1” and “B2” are the by-pass for all flow in excess of what demanded by priority. All flows from “A”, “B1” and “B2” ports can be employed to power different functions of the machine. These valves provide a simple and efficient way to power hydraulic tools (such as hydraulic hammers) from the existing hydraulic system, without any need to modify the directional control valve. They allow the simultaneous operations, independently from the respective working pressures, of both the hydraulic actuator powered by the priority outlet “A”, and of the normal functions of the machine (traction, slewing, cylinder motions, etc.) supplied by the main directional valve through the by-pass outlet “B1” and “B2”.

Technical data

Max. operating pressure	350 bar (5000 psi)
Max. priority line pressure: limited by relief valve (6). See “priority pressure range”	
Back pressure at T port	max. 1.5 bar (20 psi)
Drain from T, with solenoid valve non-energized	up to 1.5 l/min. (0.4 gpm)
Weight	See “Dimensions”
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-20 °C to 80 (-4 to 176 °F)
Viscosity range	20 to 380 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

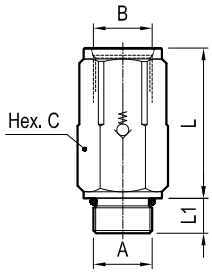
Fitting and connections

- When positioning and tightening the valve, avoid any deflection of the body which could prevent the internal spool from sliding freely and impair the metering performance; it is recommended to use the 3 available fixation holes as locating points and to fit 3 equal spacers (metal washers), one on each point, between the valve body and the supporting structure.

Connections to the hydraulic system:

- Port “P1” and “P2” (inlets) to the main line from the pumps.
- Port “A” (priority outlet) to the line feeding the hydraulic hammer, or the attachment. Important: for the correct metering of the compensating spool the priority outlet shall be always pressurized, with a back-pressure of at least 8-9 bar (115-130 psi); if necessary, fit a check valve with the needed cracking pressure.
- Port “B1” and “B2” (by-pass, or excess flow outlet) to the lines delivering the oil to the main directional valve.
- Port “T” to a tank line. It is absolutely necessary that port “T” is connected to a low pressure tank line, 1-1.5 bar max (15-22 psi max).

Sleeve type check valves



Port sizes A - B	Cracking pressure bar (psi)	Dimensions mm (inches)			Ordering code
		C	L	L1	
G 1/2	8 (115)	30 (1.18)	57 (2.24)	14 (0.55)	043117000301000 R930000444
G 3/4	8 (115)	36 (1.42)	69 (2.72)	16 (0.63)	043117000401000 R930000445
G 1	8 (115)	46 (1.81)	82 (3.23)	18 (0.71)	043117000501000 R930000446

Adjustment of priority flow

The volume of priority flow from port “A” can be easily modified by turning the screw (1): the flow increases by turning the screw counter-clockwise and, once adjusted to the desired level, it remains constant independently from the working pressure.

Adjustment of maximum priority pressure

The maximum pressure in the priority line “A” can be adjusted by turning the screw (5) of the small relief cartridge (6) which controls the maximum pressure in the chamber (3): when this “pilot” cartridge opens, the pressure in chamber (3) drops and the priority flow is stopped. Note: the relief cartridge (6) controls only the maximum pressure in the priority outlet “A”, and does not control the pressure in the by-pass and main line: the main line must be protected by another relief valve, capable to discharge the full oil flow.

Bosch Rexroth Oil Control S.p.A., RE 18309-54/03.2016

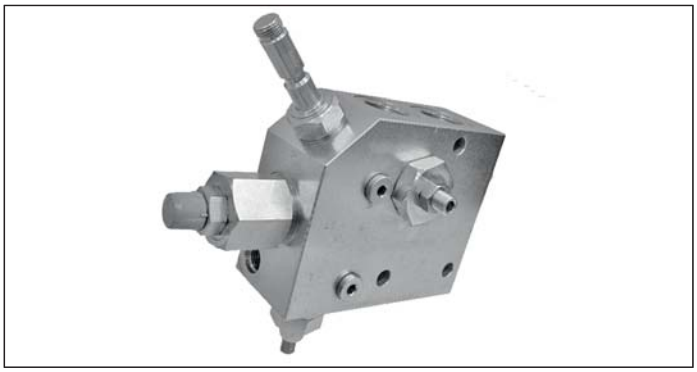
3-Way heavy duty flow control, with pressure compensated, solenoid and load sensing controlled priority flow

A-VRFC3C-VEI-VS-LS 0M.43.21.80 - Y - Z

RE 18309-63
Edition: 03.2016
Replaces: 04.2010



Description

The flow control valves series “A-VRFC3C-VEI-VS” are 3 way, with one inlet “P” and two outlets “A” and “B”, the first outlet “A” being priority, pressure compensated type, with pressure relief valve and available on demand through a solenoid cartridge; the second outlet “B” is the by-pass for all flow in excess of what demanded by priority. Both flows from “A” and “B” ports can be employed to power different functions of the machine. A pressure signal “LS” from the valve is delivered to the load sensing circuit to increase the pump flow in order to match the requirement. These valves provide a simple and efficient way to power hydraulic tools (such as hydraulic hammers) from the existing hydraulic system, without any need to modify the directional control valve. They allow the simultaneous operations, independently from the respective working pressures, of both the hydraulic actuator powered by the priority outlet “A”, and of the normal functions of the machine (traction, slewing, cylinder motions, etc.) supplied by the main directional valve through the by-pass outlet “B”.

Technical data

Max. operating pressure	350 bar (5000 psi)
Max. priority line pressure: limited by relief valve (6). See “priority pressure range”	
Back pressure at T port	max. 1.5 bar (20 psi)
Drain from T, with solenoid valve non-energized	up to 1.5 l/min. (0.4 gpm)
Weight	See “Dimensions”
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-20 °C to 80 (-4 to 176 °F)
Viscosity range	20 to 380 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

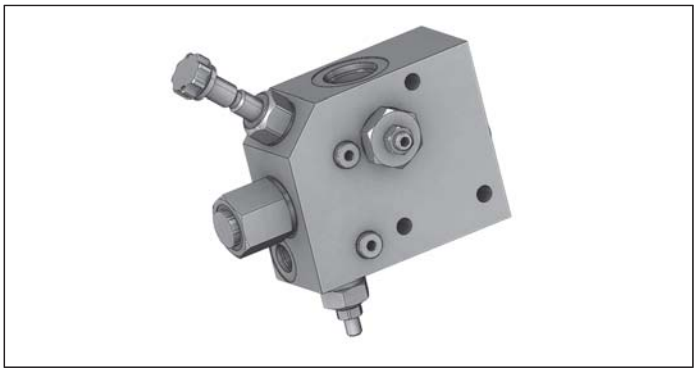
2-Way heavy duty flow control, with pressure compensated, solenoid and load sensing controlled priority flow

A-VRFC2C-VEI-VS-LS 0M.28.03.80 - Y - Z

RE 18309-64
Edition: 03.2016
Replaces: 04.2010



Description

The FLOW CONTROL VALVES code OM.28.03.80 are 2 way, with one inlet “P” and one outlet “A”, being the port “A” the priority line port, pressure compensated, with pressure relief valve, and available on demand through a solenoid cartridge.

A pressure signal “LS” from the valve is delivered to the load sensing circuit to increase the pump flow in order to match the requirement.

These valves provide a simple and efficient way to power hydraulic tools (such as hydraulic hammers) from the existing hydraulic system, without any need to modify the directional control valve.

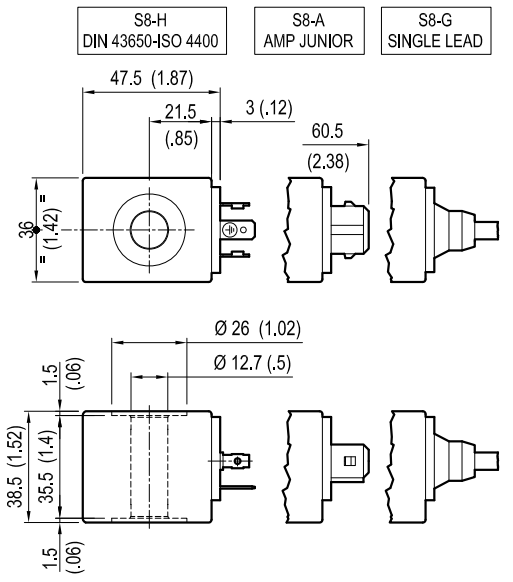
Adjustment of priority flow

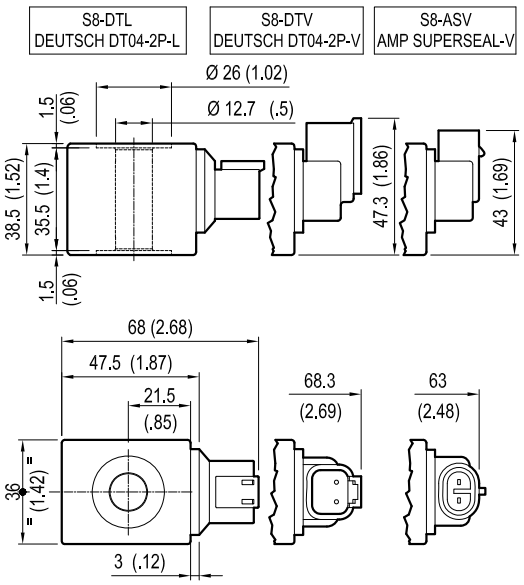
The volume of priority flow from port “A” can be easily modified by turning the screw (1): the flow increases by turning the screw counter-clockwise and, once adjusted to the desired level, it remains constant independently from the working pressure.

Adjustment of maximum priority pressure

The maximum pressure in the priority line “A” can be adjusted by turning the screw (5) of the small relief cartridge (6) which controls the maximum pressure in the chamber (3): when this “pilot” cartridge opens, the pressure in chamber (3) drops and the priority flow is stopped. Note: the relief cartridge (6) controls only the maximum pressure in the priority outlet “A”, and does not control the pressure in the by-pass and main line: the main line must be protected by another relief valve, capable to discharge the full oil flow.

Ordering code: **OD.02.17 - X - Y - Z**





COILS

Attention: indicated coils fit every hammer valve versions

TECHNICAL DATA
Weight: 0.180 kg (0.4 lbs)
Encapsulating material: IXEF
Heat insulation Class H: 180°C (356°F)
Ambient temperature range: -30/+60°C (-86/+140°F)
Inlet voltage fluctuations must not exceed ±10% of nominal voltage to obtain correct operation and long life coils.

X	Y	Connections	Circuit	Voltage

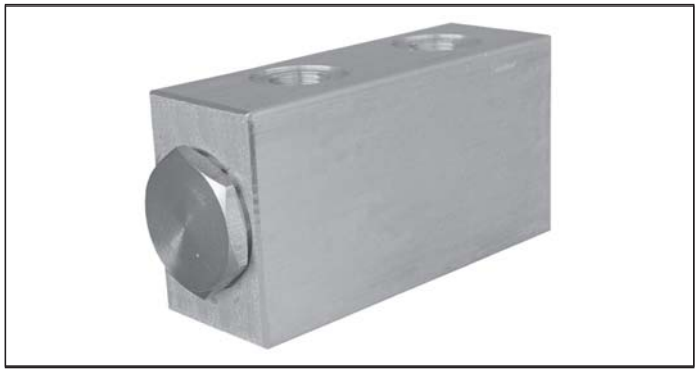
RE 18309-55
Edition: 03.2016
Replaces: 06.2010



Description

This valve gives division of input flow from V to C1-C2, and re-combines flows in reverse direction from C1-C2 to V. The ratio between the flows through C1 and through C2 is maintained constant (typically 50% / 50%) over a wide range of pressure variations and of pressure imbalance in order to synchronize the motion of 2 actuators in both forward and reverse directions. In flow division mode, should either C1 or C2 be blocked, approximately 1÷2% of the available flow can be forced through the port still open.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Flow division ratio: 50% - 50% For any chosen inlet flow capacity (refer to table Z), the slippage, or the difference from theoretical value between the divided flows, depends from the inlet flow, and is lowest in the top portion of the selected range: generally it never exceeds ± 3%.	
Weight	0.9 kg (1.98 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

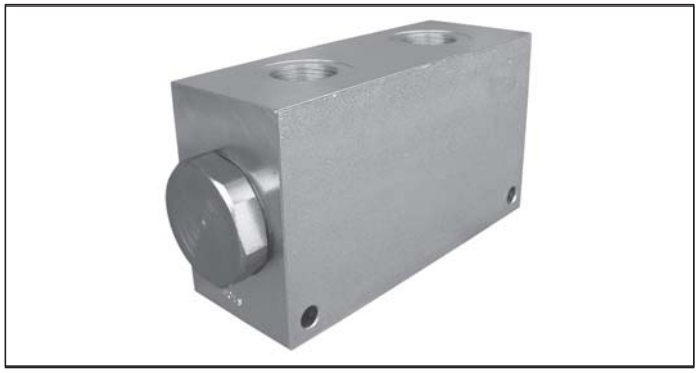
Bosch Rexroth Oil Control S.p.A., RE 18309-61/03.2016

Flow divider, combiner

A-DRF

0M.E1.03.90.05 - Z

RE 18309-62
Edition: 03.2016
Replaces: 07.2012



Description

This valve gives division of input flow from V to C1-C2, and re-combines flows in reverse direction from C1-C2 to V. The ratio between the flows through C1 and through C2 is maintained constant (typically 50% / 50%) over a wide range of pressure variations and of pressure imbalance in order to synchronize the motion of 2 actuators in both forward and reverse directions. In flow division mode, should either C1 or C2 be blocked, approximately 1÷2% of the available flow can be forced through the port still open.

Technical data

Max. operating pressure	350 bar (5000 psi)
Flow division ratio: 50% - 50% For any chosen inlet flow capacity (refer to table Z), the slippage, or the difference from theoretical value between the divided flows, depends from the inlet flow, and is lowest in the top portion of the selected range: generally it never exceeds ± 3%.	
Weight	6.1 kg (13.3 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Description

Initially, flow passes freely from P to REG. When the pressure at REG exceeds the pressure setting, the valve acts to restrict input flow at P. This increases the pressure drop through the valve and maintains consistent pressure at REG. The spring chamber is drained to prevent a build-up of back-pressure against the spool. Additionally, if pressure at REG rises above the pressure setting, flow is relieved to R (Tank) until the setting is re-attained.

Description

Initially, the flow goes to a side line connected to V1, not shown here, and energizes a first actuator until pressure increases to meet the selected valve setting; then flow opens the relief cartridge and passes from V1 to C1 energizing the second actuator connected to C1. Note that pressure at C1, i.e. the pressure needed to operate the second actuator, is additive to the relief setting of the valve. The check valve allows reverse flow, from C1 to V1.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	10 l/min. (3 gpm)
Pressure drop curves are shown with zero black pressure on “C1” port. This valve is successfully employed to energize a secondary actuator which only requires low pressure and low flow (for example: a sliding safety bolt).	
Weight	0.3 kg (0.66 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	30 l/min. (8 gpm)
For a good performance, the pressure in the secondary circuit should not drop below 20 bar.	
Weight	0.81 kg (1.79 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

Description

Initially, the flow goes to a side line connected to V1, not shown here, and energizes a first actuator until pressure increases to meet the selected valve setting; then flow opens the relief cartridge and passes from V1 to C1 energizing the second actuator connected to C1. The valve applies a balanced relief piston allowing relief operation at the valve setting independent of back-pressure at C1. With line pressure equal or higher than setting, after valve opening, the full pressure is transferred from V1 to C1 and to the second actuator. The hydraulic damping of the relief piston provides enhanced stability at all flows. The check valve allows reverse flow, from C1 to V1.

RE 18309-98
Edition: 03.2016
Replaces: 04.2010

Description

Single ball shuttle valve with 3 ports for in-line plumbing: when the ports V1 and V2 are connected to 2 work lines, the valve delivers the highest of the 2 pressures to the common port C. The single ball allows for the decay of the pressure signal when both work ports drop to a lower pressure level.

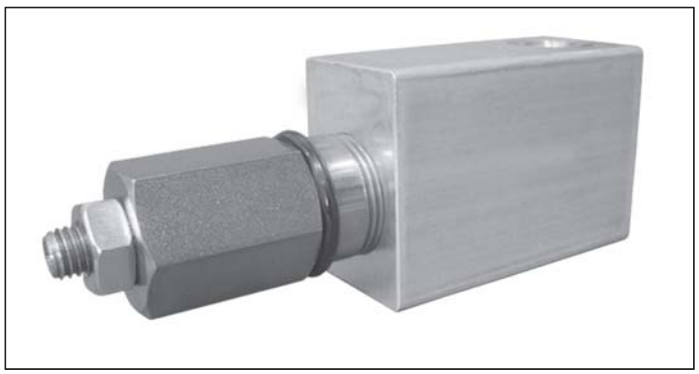
RE 18310-10
Edition: 03.2016
Replaces: 07.2012



Description

It is intended for protection of a pressure gauge M connected to a pressure line P; the valve blocks excess pressure to the instrument M, preventing calibration failure, internal damage, and “blow-out” from over-ranging – a principal cause of instrument failure. The valve is normally open, and positively closes, without chattering, when the adjusted pressure threshold is reached; a pressure reduction at P port below the set value will automatically re-open the valve, without requiring external re-setting.

Note: port identified with M are not protected with calibrated orifice but in direct connection with pressure channels.

Technical data

Bosch Rexroth Oil Control S.p.A., RE 18310-10/03.2016

Pilot operated unloading

BM-N

05.93.04 - X - Y - Z

RE 18310-11
Edition: 03.2016
Replaces: 04.2010

Description

This valve unloads a pump or a pressure line to tank when a pilot pressure is reached. Flow from P to T is normally blocked by the main spool; when pressure at Pil increases, and reaches the selected setting, it displaces the pilot piston and exhausts to tank the spring side of the main spool allowing it to shift and to open the flow unloading path from P to T. Back-pressure at T is additive to the unloading setting of the valve.

Technical data

Operating pressure	up to 210 bar (3000 psi)
Max. flow	200 l/min. (53 gpm)
Weight	see “Dimensions”
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.

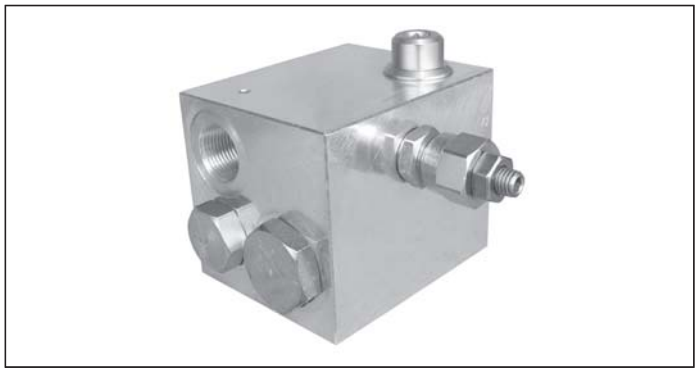
Bosch Rexroth Oil Control S.p.A., RE 18310-11/03.2016

Pump unloading

VEP-VSP2

05.90.06 - X - Y - Z

RE 18310-13
Edition: 03.2016
Replaces: 04.2010



Description

Through the check valve, the pump inlet P1 is combined to the inlet P2 to give maximum flow out of C at low pressure. As load pressure (C) increases and reaches the selected unloading setting, the pilot piston (1) is displaced and exhausts to tank the spring chamber of the main spool allowing P1 pump to be by-passed to tank. Above this pressure threshold, only P2 pump continues to deliver oil out of C, with a resulting reduced flow at high pressure. The incorporated relief cartridge (2) provides protection by limiting the maximum pressure in the system line (C).

Technical data

Operating pressure	P1 = 100 bar (1450 psi) P2 = 210 bar (3000 psi)
Max. flow of valve 2	30 l/min. (8 gpm)
Weight	2.5 kg (5.5 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)

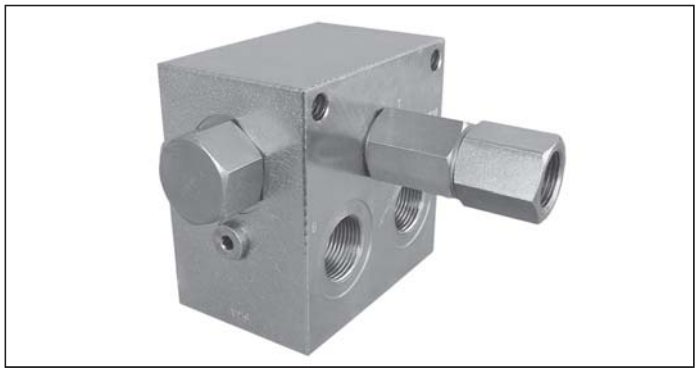
Bosch Rexroth Oil Control S.p.A., RE 18310-13/03.2016

Purge valve for hydrostatic transmission

A-VSL-R

08.64.05.00 - Y

RE 18310-18
Edition: 03.2016
Replaces: 04.2010



Description

The inlets A-A and B-B are connected to and crossed by the pressure lines of a closed loop hydraulic transmission. As pressure rises in either line, the internally piloted 3-way/3-positions spool opens the lower pressure line to tank through the purge relief valve (1). This allows a portion of the charge pump flow to be exhausted to tank after the oil has done its work, and allows an identical volume of fresh oil to get into the closed loop system. When the directional control (and the motion) is reversed, the spool switches in the opposite direction, maintaining hot oil exhaust. A closed by-pass (2) is fitted between ports A and B: if opened it allows to rotate the motor without hydraulic power, for example if the machine needs towing.

Technical data

Max. operating pressure	350 bar (5000 psi)
Exhaust flow capacity: 90 l/min (24 gpm) suitable for use in transmission circuits up to 450 l/min (120 gpm), if the re-newed oil needs to be at least 20% of the maximum main flow.	
Pressure setting of the purge relief valve (1): it can be made through the threaded adjuster reachable after unscrewing the outmost portion of the Tank hexagon sleeve (refer to the SPRINGS table for details). By-pass screw (2): it can be opened if the transmission motor or pump need to be rotated when the machine is not in operation; normally, the by-pass must be locked down and stay closed for correct performance of the transmission.	
Weight	4.7 kg (10.4 lbs)
Manifold material	Zinc plated steel
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	10 to 500 mm^2/s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.

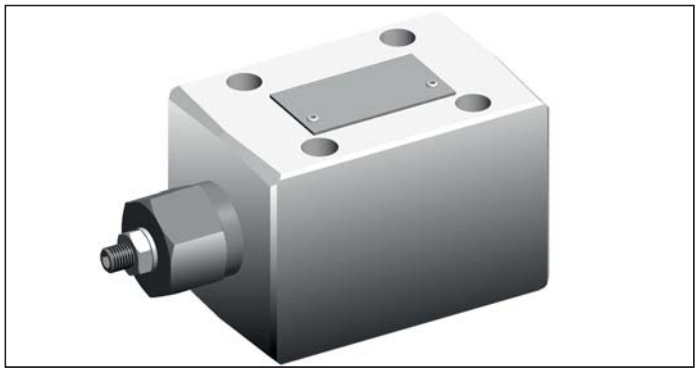
Bosch Rexroth Oil Control S.p.A., RE 18310-18/03.2016

Automatic directional

V.LC2-IA12

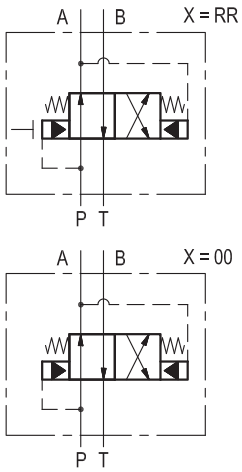
L5235 - X - 00000000

RE 18310-24
Edition: 03.2016
Replaces: 04.2013



Description

It is a directional valve which generates continuous reciprocating motion of a double acting actuator, with no need of external controls. When flow starts into P, the control spool opens wider P to A (and B to Tank); the delta p between P and A is employed to keep the spool in this wider open position. As load becomes excessive, or at end-stroke, the system relief valve opens, the oil is diverted to tank, flow P to A stops and the delta p vanishes; now the combined action of the centering springs and of the static pressure in hose A push back the spool, and make it shift to the other position. This opens P to B (and A to Tank) and the motion is reversed; the flow builds-up a delta p between P and B which holds the spool in the new position. When the system relief valve opens again the flow stops, the delta p vanishes, and the spool shifts to its "normal" P to A position: a new cycle starts.



Technical data

Max. operating pressure	250 bar (3600 psi)
Flow range	10 - 100 l/min. (3 - 26 gpm)
Good and stable shifting from P -> A into P -> B requires that some oil returns back from port A as flow stops and A opens toward Tank: as a practical rule, please ensure that line A includes a portion of flexible hose at least 500 mm long to provide some "accumulator effect". For adjustment of the pressure setting of the system relief valve, the reciprocating function must be temporarily disabled: in order to lock the spool and prevent shifting, screw down the locking screw (if available) under the dome nut. This screw must be turned back up to the initial position, once the adjustment is finished. **Note:** this valve is available with features different from what here described; contact our Service Network for the relevant information: - Initial oil flow direction: P -> B (instead of P -> A).	
Weight	2.8 kg (6.2 lbs)
Manifold material	Cast iron (ISO 16112/JV/400)
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-20 °C to 80 (-4 to 176 °F)
Viscosity range	5 to 420 mm^2/s (cSt)
Permissible degree of fluid contamination	ISO 4572: $\beta_x \geq 75$ X=12...15 ISO 4406: class 20/18/15 NAS 1638: class 9

Note: for applications outside these parameters, please consult us.

Inlet Elements basic

TE-00-__-

RE 18300-01
Edition: 02.2016
Replaces: 07.2012

Description

The inlet elements have threaded ports and connect the external P and T lines to the P and T channels of the ED Directional Valve Elements.
They include a Test Point port (M) for pressure gauge connection.
Port sizes can be G 3/8, G 1/2 or SAE 8 (3/4 16 UNF).
Material: the body can be made of Black Anodized Aluminium (AL), or of Yellow Zinc plated (Cr+3) Cast Iron (CI).

Inlet Elements
with Primary Pressure Relief Valve

TE-01-__-

RE 18300-02
Edition: 02.2016
Replaces: 07.2012

Description

The inlet elements TE-01-__ are employed to connect the external P and T lines to the P and T channels inside the ED elements of the Directional Valve Assembly. They incorporate a pressure relief cartridge which limits the maximum primary pressure in the P line and unloads to Tank any excess flow. The relief setting can be checked through the Test Point port M.

The TE-01-__ inlet elements are available in two versions:
-Body made of Black Anodized Aluminium (Al), or
-Body made of Yellow Zinc plated (Cr+3) Cast Iron (CI).
Port sizes can be G 3/8, G 1/2 or SAE 8 (3/4" 16 UNF).

Inlet Elements
with Primary Pressure Relief Valve and with LS connections

TE-04-__-

RE 18300-04
Edition: 02.2016
Replaces: 07.2012

Description

The inlet elements TE-04-__ are employed to connect the external P, T lines to the P, T channels inside the ED elements of the Directional Valve Assembly and to connect to the LS ports of the elements equipped with LS channels. They incorporate a pressure relief cartridge which limits the maximum primary pressure in the P line and unloads to Tank any excess flow.

The TE-04-__ inlet elements are available with body made of Black Anodized Aluminium (AL).

Hydraulic Ports P and T can be size G 3/8, G 1/2 or SAE 8 (3/4" 16 UNF). LS port is G 1/4 on BSPP versions, and SAE 4 in SAE versions.

Bosch Rexroth AG, RE 18300-04/02.2016

Inlet Elements
with Primary Pressure Relief Valve
and with Solenoid Unloading Cartridge

TE-05-__-

RE 18300-05
Edition: 02.2016
Replaces: 07.2012

Description

The inlet elements TE-05-__ are employed to connect the external P and T lines to the P and T channels inside the ED elements of the Directional Valve Assembly. They incorporate a pressure relief cartridge which limits the primary pressure in the P line. The relief setting can be checked through the Test Point port M. When fitted, the Normally Open Solenoid Unloading VEI Cartridge unloads to Tank all the P line flow; unloading stops when the cartridge coil is energized.

The TE-05-__ inlet elements are available in two versions:
- Body made of Black Anodized Aluminium (Al), or
- Body made of Yellow Zinc plated (Cr+3) Cast Iron (CI).

Port sizes can be G 3/8, G 1/2 or SAE 8 (3/4" 16 UNF).

Technical data

General			
Inlet Element Type		AL Version	CI Version

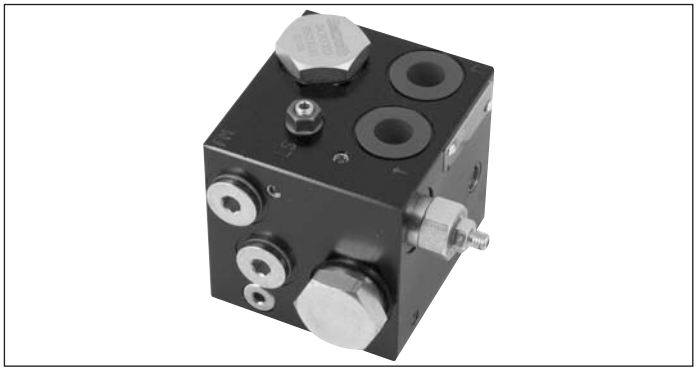
Bosch Rexroth AG, RE 18300-05/02.2016

Inlet Elements
with limitation of primary pressure in the system and LS controlled unloading of the excess flow

TE-06-__-

RE 18300-06
Edition: 02.2016
Replaces: 07.2012



Description

The inlet elements TE-06-__ are employed to connect the external P, T lines to the P, T channels inside the ED elements of the Directional Valve Assembly and to connect to the LS ports of the elements equipped with LS channels. An LS controlled 3-way compensator provides pressure compensated flow to the ED elements of the Directional Valve Assembly. The same 3-way compensator is also controlled by a pilot relief cartridge and unloads to tank any excess flow in order to limit the primary pressure in the system. In the inlet elements version TE-06-__-01, the 3 way compensator can be mechanically blocked and the relief cartridge only controls the LS line pressure. The TE-06-__ inlet elements are available with body made of Black Anodized Aluminium (Al). Port sizes can be G 3/8, G 1/2, with test point PM and LS port G 1/4.

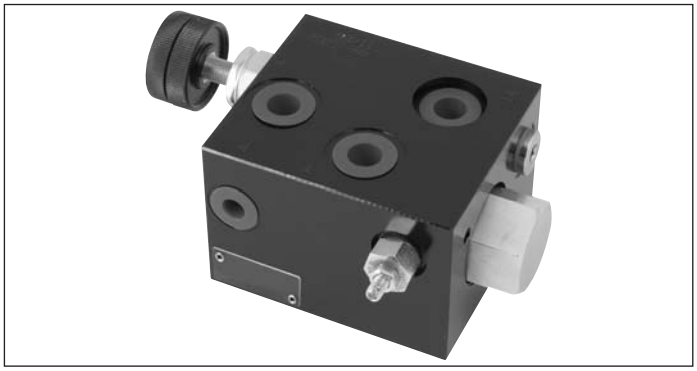
Bosch Rexroth AG, RE 18300-06/02.2016

Inlet Elements
with limitation of primary pressure, LS compensated flow control and solenoid operated unloading

TE-07-__-

RE 18300-07
Edition: 02.2016
Replaces: 07.2012



Description

The inlet elements TE-07-__ are employed to connect the external P, T lines to the P, T channels inside the ED elements of the Directional Valve Assembly and to connect to the LS ports of the elements equipped with LS channels. The main functions are: to provide LS controlled pressure compensated flow to the Directional Valve Elements, to limit the primary pressure in the P channels and to unload to Tank the inlet flow when all hydraulic operations must be inhibited, by de-energizing the VEI solenoid operated cartridge.
They are available in two versions: TE-07-01-03-... suitable for fixed displacement pumps, and TE-07-02-03-... for variable displacement pumps. The TE-07-__ inlet elements are manufactured with body made of Black Anodized Aluminium (AL). Port sizes are G 1/2, with LS and M test points G1/4.
NOTE: the mechanical locking of the 3-way pressure compensator can be supplied upon request.

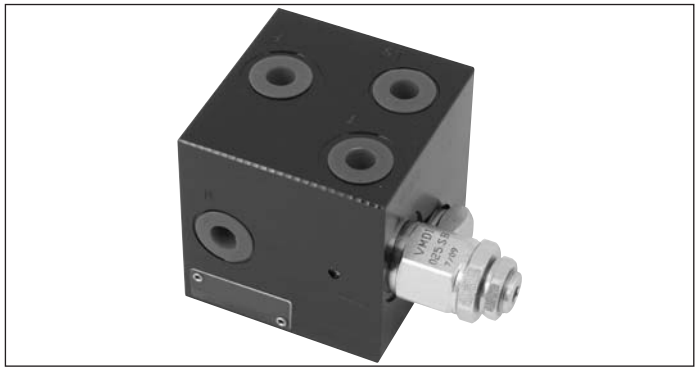
Bosch Rexroth AG, RE 18300-07/02.2016

Inlet Elements
with primary pressure relief valve
and proportional LS controlled 3-way flow regulator

TE-10-__-

RE 18300-09
Edition: 02.2016
Replaces: 07.2012



Description

The inlet elements TE-10-__ are employed to connect the external P, T lines to the P, T channels inside the ED elements of the Directional Valve Assembly and to connect to the LS ports of the ED elements equipped with LS channels. The LS signal is sent downstream of the proportional flow restrictor VEP: it provides a proportional pressure compensated flow, across the VEP, for the ED elements of the Directional Valve Assembly, and it unloads the excess flow. The main functions are: to limit the maximum primary pressure in the P line and to supply proportional pressure compensated flow the ED elements of the Directional Valve Assembly. TE-10-__ inlet elements are available with body made of Black Anodized Aluminium (Al).
P and T Port sizes can be G 3/8, G 1/2, or SAE 8. Test point M is G 1/4 on BSPP versions, and SAE 4 in SAE versions.

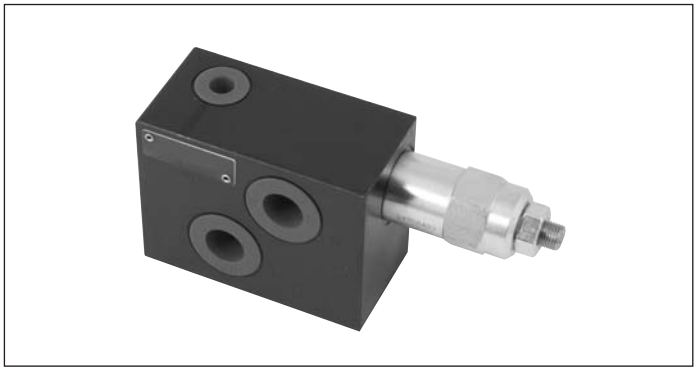
Bosch Rexroth AG, RE 18300-09/02.2016

Inlet Elements
with Pressure Reducing Valve on the P line

TE-11-__-

RE 18300-10
Edition: 02.2016
Replaces: 07.2012



Description

The inlet elements TE-11-__ are employed to connect the external P and T lines to the P and T channels inside the ED elements of the Directional Valve Assembly. They incorporate a 3-way pressure reducing / relieving cartridge which allows to control the primary pressure in the P line of the ED elements. The primary pressure can be adjusted and can be checked and through the Test Point port M.
The TE-11-__ inlet elements are available with body made of Black Anodized Aluminium (AL).
Hydraulic Ports P and T can be size G 3/8, G 1/2 or SAE 8 (3/4" 16 UNF). Test point M is G 1/4 on BSPP versions, and SAE 4 in SAE versions.

Bosch Rexroth AG, RE 18300-10/02.2016

Inlet Elements
with by-pass compensator, LS relief for open center control block and solenoid operated unloading

TE-13-__-

RE 18300-13
Edition: 02.2016
Replaces: 07.2012

Description

The inlet elementsTE-13-__ are employed to connect the external P, T lines to the P, T channels inside the ED elements of the Directional Valve Assembly and to connect the LS line for inlet flow control. An LS controlled 3-way compensator provides pressure compensated flow to the ED elements of the Directional Valve Assembly, any excess flow si bypassed to tank at LS pressure plus compensator spring bias. When the ED elements are in neutral position, the compensator bypasses the entire flow to tank at a bypass pressure equal to the compensator spring bias. In case the LS pressure reaches the relief pressure setting,the compensator unloads to tank the entire flow at relief pressure plus compensator spring bias The TE-13 can be equipped with a NO or NC Solenoid Unloading VEI Cartridge, which can be employed to unloads to tank the LS signal and bypasses the entire flow to tank at a bypass pressure equal to the compensator spring bias. The TE-13 is provided with non compensated bleed down orifice. The TE-13-.... is made of zinc plated cast iron. The coil S8-356 must be ordered separately (refer to RE18325-90).

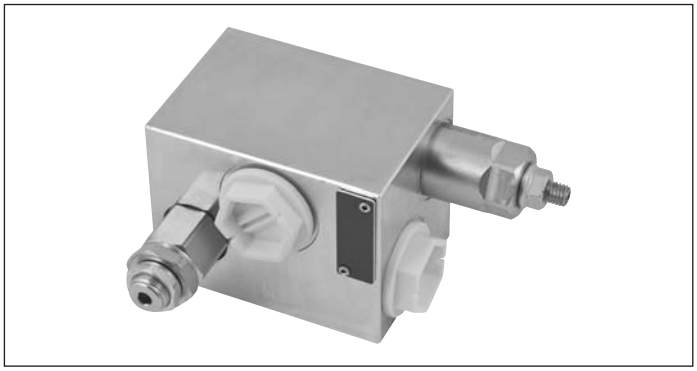
Bosch Rexroth AG, RE 18300-13/02.2016

Inlet Elements with LS connections and double pressure relief valve (P and LS line)

TE-16-__-

RE 18300-14
Edition: 02.2016
Replaces: 07.2012



Description

The inlet elements TE-16-__ are employed to connect the external P,T lines to the P,T channels inside the ED elements of the Directional Valve Assembly and to connect the LS ports of the elements equipped with LS channels. They incorporate two pressure relief cartridge which limits the maximum primary pressure in the P line and the maximum load pressure in the LS line and unloads to tank any excess flow.

The TE-16-__ inlet elements are available with body made of yellow zinc plated (Cr+3) cast iron (CI).

Ports sizes can be G 1/2 or G 3/4 or SAE10 (7/8" 14 UNF). LS ports are G 1/4 for BSPP version, and SAE 4 (7/16" 20 UNF) for "UNF" version.

General specifications

Valve elements with 4 ways and 3, or 2, positions.
Control spools directly operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin tubes for DC coils, with push rod for mechanical override; burnish surface treatment.
Coils can be rotated 360° around the tube.
Manual override (push-button or screw type) available as option.

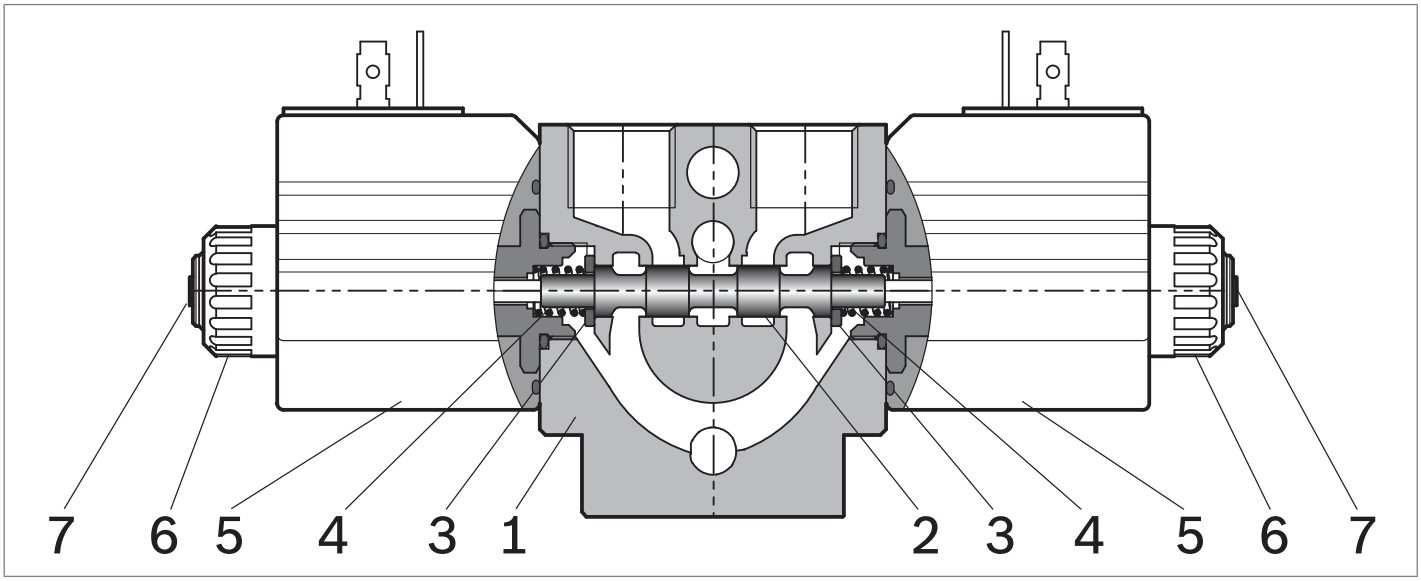
Functional description



The sandwich plate design directional valve elements B8_08... are very compact direct operated solenoid valves which control the start, the stop and the direction of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**). When energized, the force of the solenoid (**5**) pushes the control spool (**2**) from its neutral-central position “0” to the required end position “a” or “b”, and the required flow from P to A (with B to T), or P to B (with A to T) is achieved. Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool returns in its neutral-central position.
Each coil is fastened to the solenoid tube by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

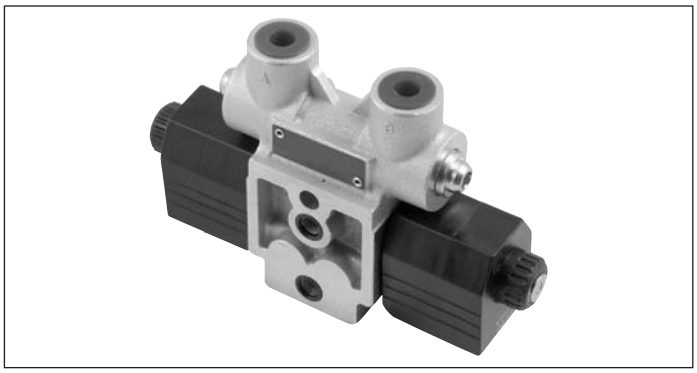
4/3 Directional valve elements with or without secondary relief valves, with or without LS connections, and with PO check valves

B8_48... (EDBZ-VR)

RE 18300-53
Edition: 02.2016
Replaces: 07.2012



Size 4
Series 00
Maximum operating pressure 250 bar (3625 psi)
Maximum flow 20 l/min (5.3 gpm)
Port connections G 3/8 SAE6 - M16x1.5

General specifications

Valve elements with 4 ways and 3 positions.
Control spools directly operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin tubes for DC coils, with push rod for mechanical override; burnish surface treatment.
Single or Dual cross piloted check valves on A and B ports.
PO checks valves with 4:1 pilot ratio.
Coils can be rotated 360° around the tube.
Manual override (push-button or screw type) available as option.

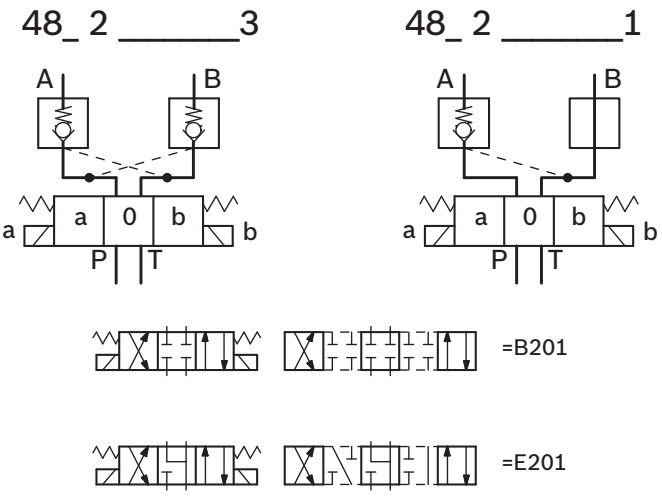
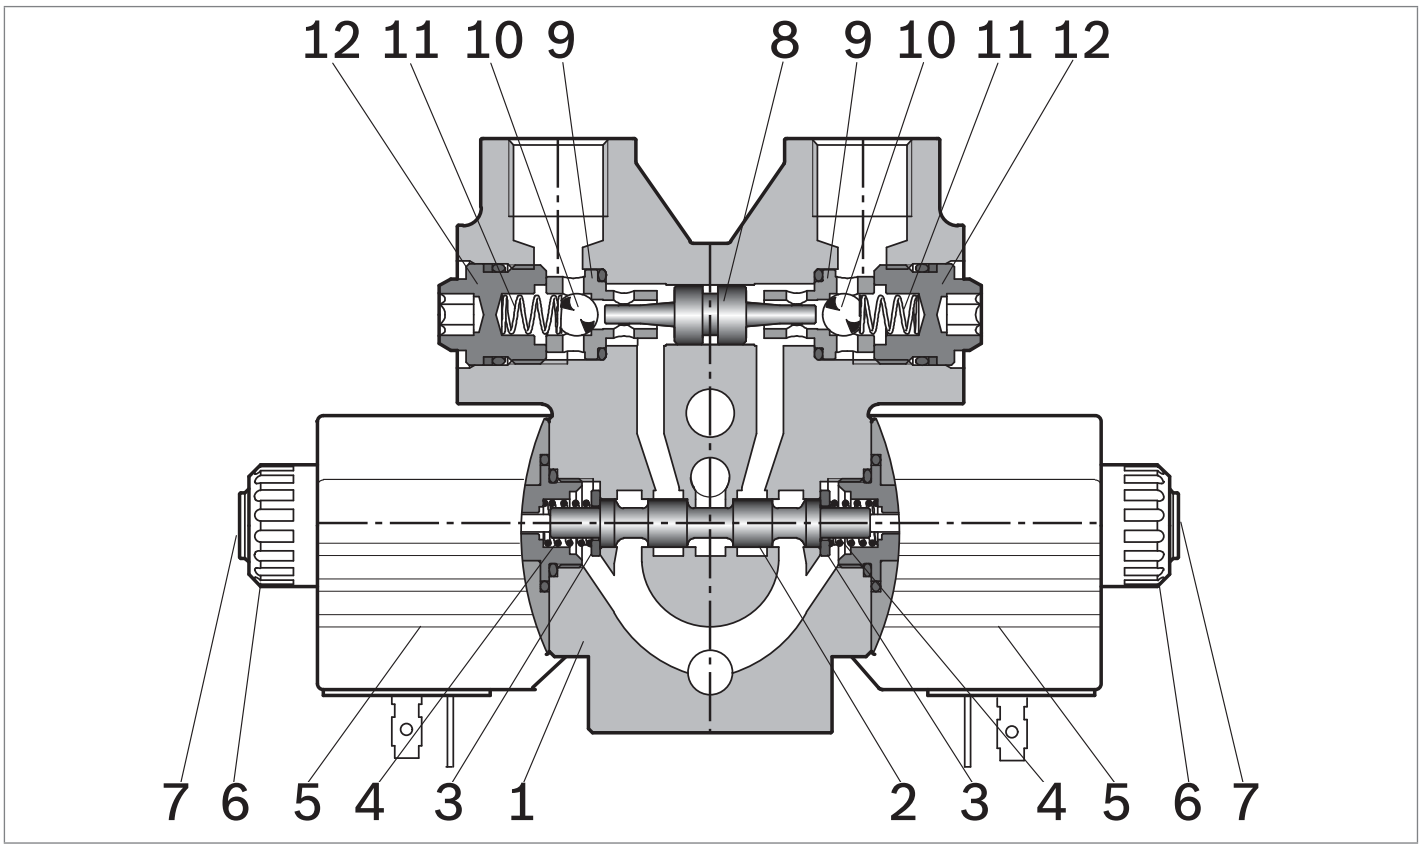
Spool variants



1) The required hydraulic symbol and spool variant can be chosen by consulting this page.
2) For connectors ordering code see data sheet RE 18325-90.
The secondary valves have a maximum flow capacity of 6 l/min. (1.6 gpm).

Functional description



The sandwich plate design directional valve elements B8_48... are very compact direct operated solenoid valves which control the start, the stop and the direction of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), two solenoids (**5**), and two return springs (**4**). The upper part of the housing is extended in order to provide space for the cavities where two PO check valves are fitted. They consist of two calibrated balls (**10**), with return springs (**11**), which allow upstream flow but lock on the respective seats (**9**) and prevent the return flow. The return flow is possible when they are opened by the pilot piston (**8**), if enough pilot pressure is present in the opposite line.

When energized, the force of the solenoid (**5**) pushes the control spool (**2**) from its neutral-central position “0” to the required end position “a” or “b”, and the required flow from P to A (with B to T), or P to B (with A to T) is achieved.
Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool (**2**) returns in its neutral-central position.
Each coil is fastened to the solenoid tube by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

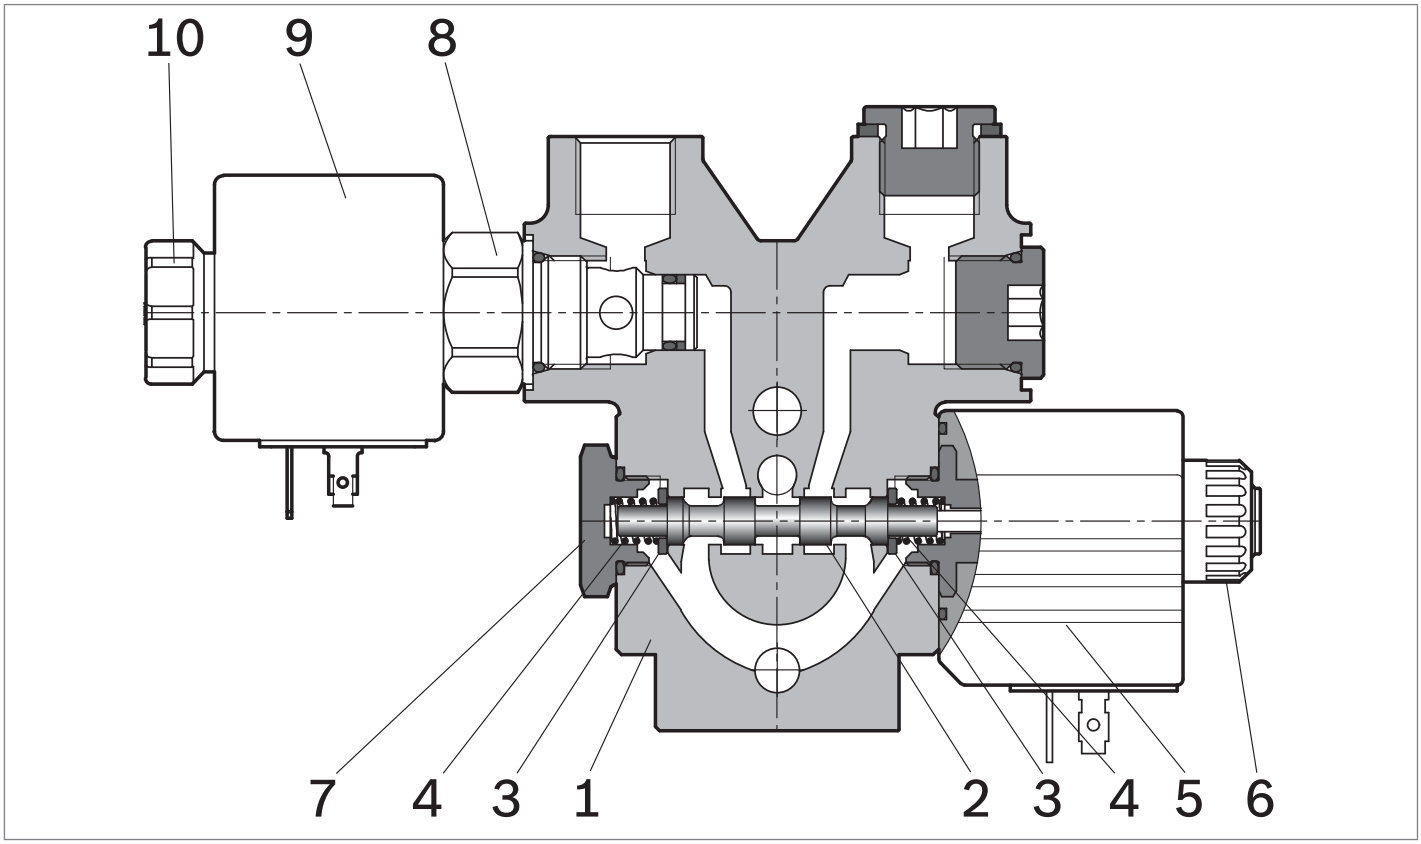
Functional description



The sandwich plate design directional valve elements B8_58... are very compact direct operated solenoid valves which control the start, the direction and the leak free stop of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one solenoid (**5**), a spring holder plug (**7**); two return springs (**4**); a solenoid screw-in cartridge VEI (**8**) with its coil (**9**).
When energized, the force of the solenoid (**5**) pushes the control spool (**2**) from its rest position “0” to the end position “b”. If there is a solenoid cartridge VEI (**8**) type C, A, O, the oil flow goes directly to the port A; if there is a solenoid cartridge VEI (**8**) type D (Dual locking), it is necessary to energize the solenoid cartridge as well in order to allow the oil flow to the port A.
Once the solenoid (**5**) is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool (**2**) returns in its rest position. The leak free holding at port A is provided by energizing (or de-energizing, if the VEI is NC type) the solenoid cartridge. By energizing open the VEI (**8**) (“C“ and “A“ versions), the A port is open to tank and downstream flow is possible.
The coils are fastened to the respective solenoids (**5**) and VEI (**8**) by the ring nuts (**6**) and (**10**).

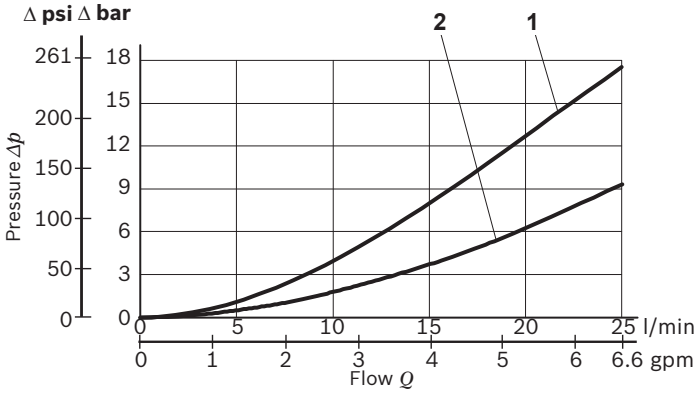
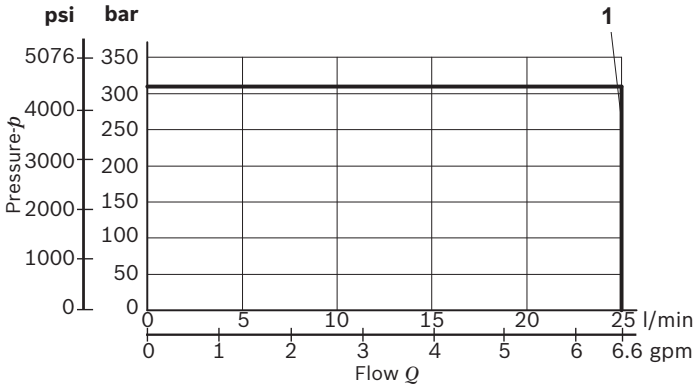
Characteristic curves



Spool Variant	Curve no.	
	B>T	P>A
X301	1	2

Measured with hydraulic fluid ISO-VG32 at 45° ±5 °C (113° ±9 °F); ambient temperature 20 °C (68 °F).

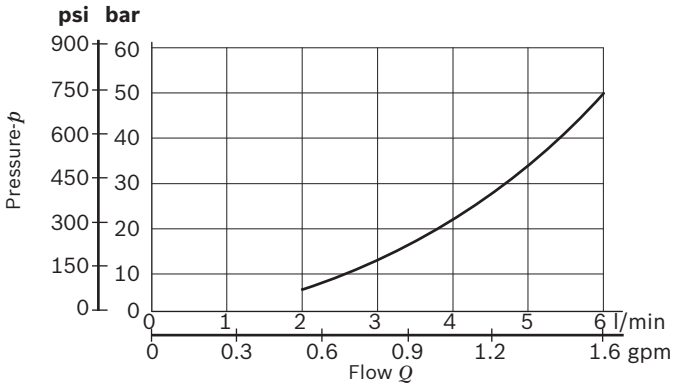
Performance limits



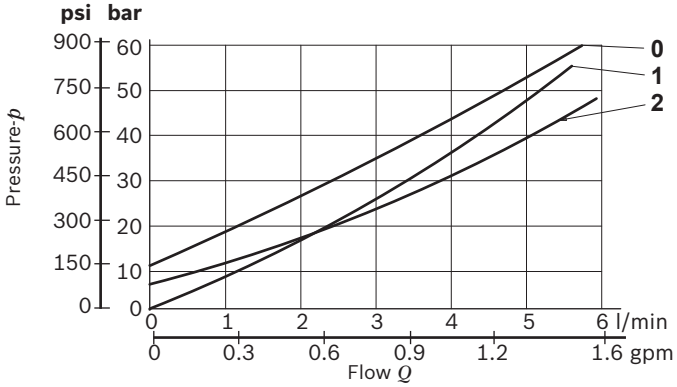
Spool Variant	Curve no.
X401	1

The performance curves are measured with flow going across and coming back, like P>A and B>T, with symmetrical flow areas.
In case of special circuit connections, the performance limits can change.

Minimum flow for efficiency of LS control

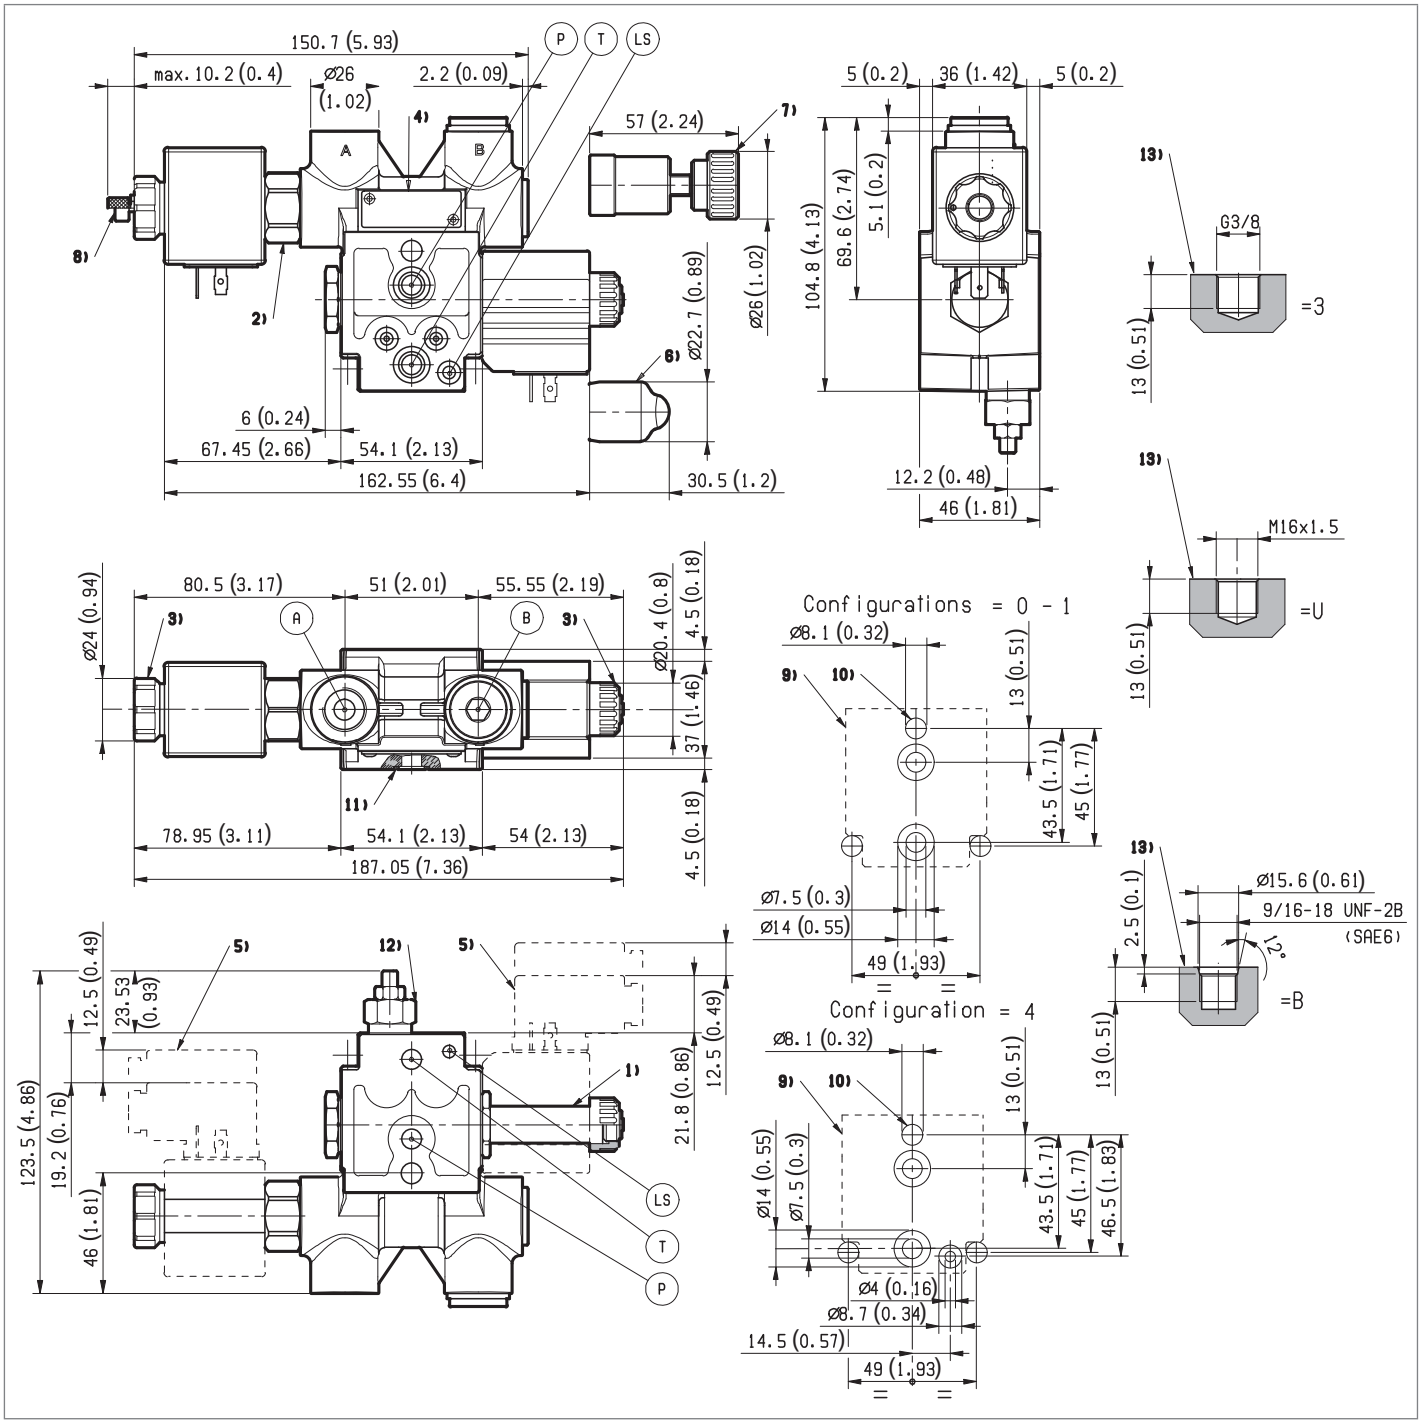


Lowest pressure setting curve for secondary valves



Secondary valve setting	Curve no.
50-210 bar (700-2950 psi)	0
100-310 bar (1400-4500 psi)	1
25-50 bar (350-700 psi)	2

External dimensions and fittings



1 Solenoid tube Ø 14 mm (0.55 inch).
2 Screw-in solenoid cartridge VEI hex 24 mm (0.94 inch). Torque 39-51Nm (28.8-37.6 lb-ft).
3 Ring nut for coil locking (OD 20.5 mm); torque 3-4Nm (2.2-3 ft-lb).
4 Identification label.
5 Clearance needed for connector removal.
6 Optional push-button manual override, EP type, for spool opening: it is pressure stuck to the ring nut for coil locking. Mat no. R933000042.
7 Optional screw type manual overide, EF type, for spool opening: it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat no. R933006377.
8 Optional manual override for VEI cartridge: it can be push/pull or screw type. Please refer to the VEI catalogue for details.
9 Flange specifications for coupling to ED intermediate elements.
10 For tie rod and tightening torque information see data sheet RE 18301-90.
11 O-Rings for P and T ports.
12 Space needed for secondary valve in configuration 1.
13 A and B ports.

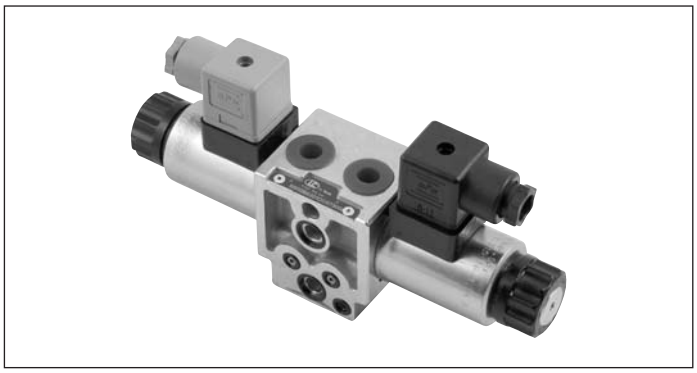
4/3 - 4/2 Directional valve elements with proportional control and with or without LS connections

B8_80... (EDB-P)

RE 18300-55
Edition: 08.2016
Replaces: 02.2016



- Size 4
- Series 00
- Maximum operating pressure 310 bar (4500 psi)
- Maximum flow 17 l/min (4.5 gpm)
- Port connections G 3/8 SAE6 - M16x1.5

General specifications

- Valve element with direct proportional control of spool.
- Control spools operated by solenoids with removable coils.
- In the de-energized condition, the control spool is held in the central position by return springs.
- Wet pin proportional tubes for DC coils, with push rod for mechanical override; nickel plated surface.
- Manual override (push-button or screw type) available as option.

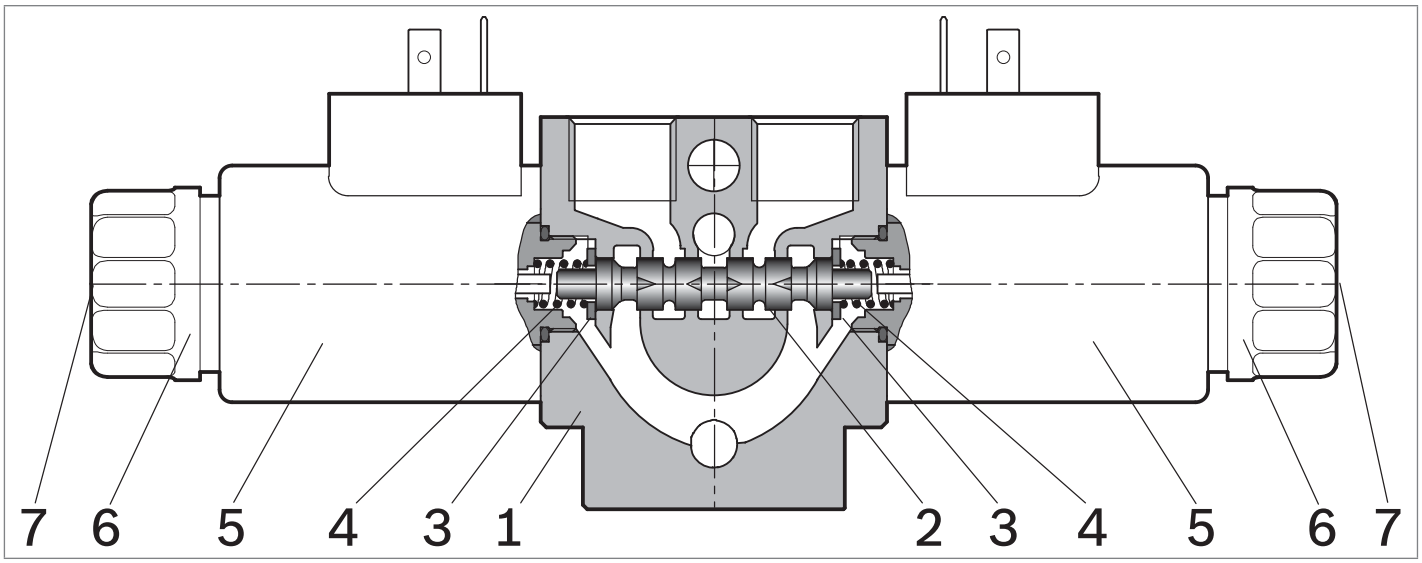
Functional description



The sandwich plate design directional valve elements B8080... are compact direct operated proportional solenoid valves which control the start, the stop, the direction and the quantity of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**).
Energized by an electronic feed regulator, each solenoid (**5**) displaces the control spool (**2**) from its neutral-central position “0” proportionally to the current received, in open loop mode; a regulated oil flow P to A , or P to B, is achieved. Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool (**2**) returns in its neutral-central position “0”.
Each coil is fastened to the solenoid tube (**5**) by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General			
Valve element with 2 solenoids		kg (lbs)	1.5 (3.3)
Valve element with 1 solenoid		kg (lbs)	1.1 (2.5)
Ambient Temperature		°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic			
Maximum pressure at P, A and B ports		bar (psi)	310 (4500)
Maximum pressure at T		bar (psi)	180 (2610)
Maximum inlet flow		l/min (gpm)	24 (6.3)
E-schemes p closed in the neutral position (connection from A to T and B to T)			Approx. 2.3% of the nominal cross-section
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:			Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.
Fluid Temperature		°C (°F)	–20....+80 (-4....+176) (NBR seals)

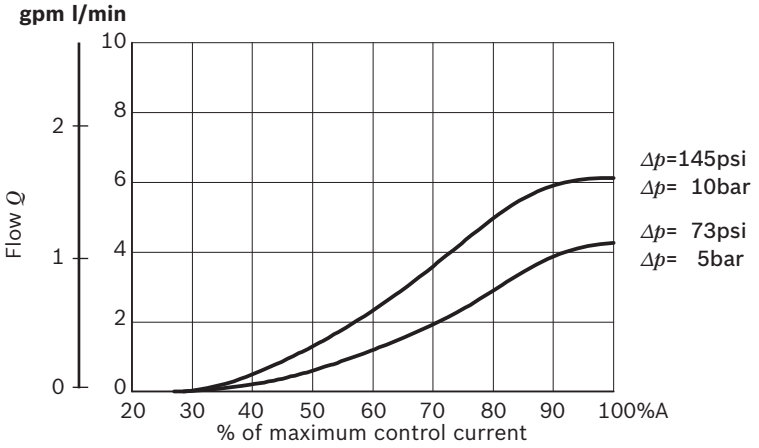
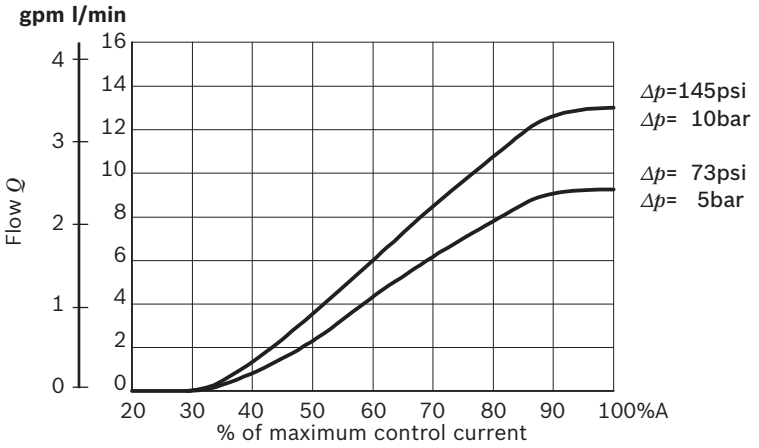
Characteristic curves

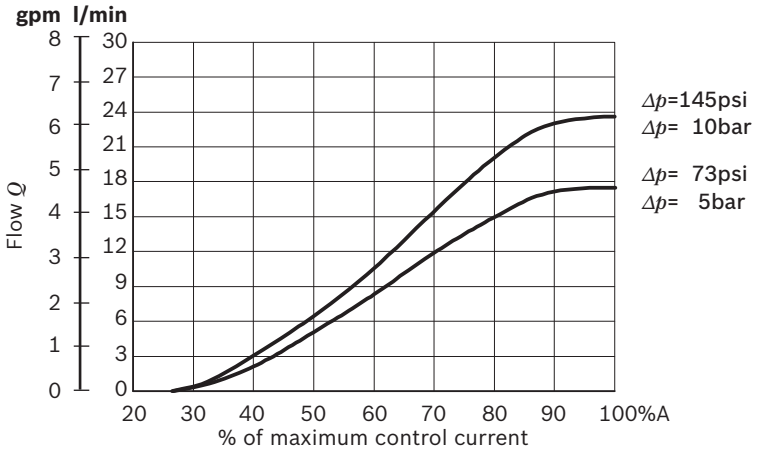
Ordering code S3: 4 l/min (1.06 gpm) with Δp 5 bar (73 psi) P>A,B.

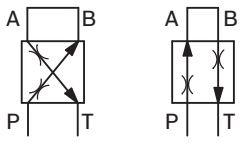


Ordering code S4: 9 l/min (2.38 gpm) with Δp 5 bar (73 psi) P>A,B.



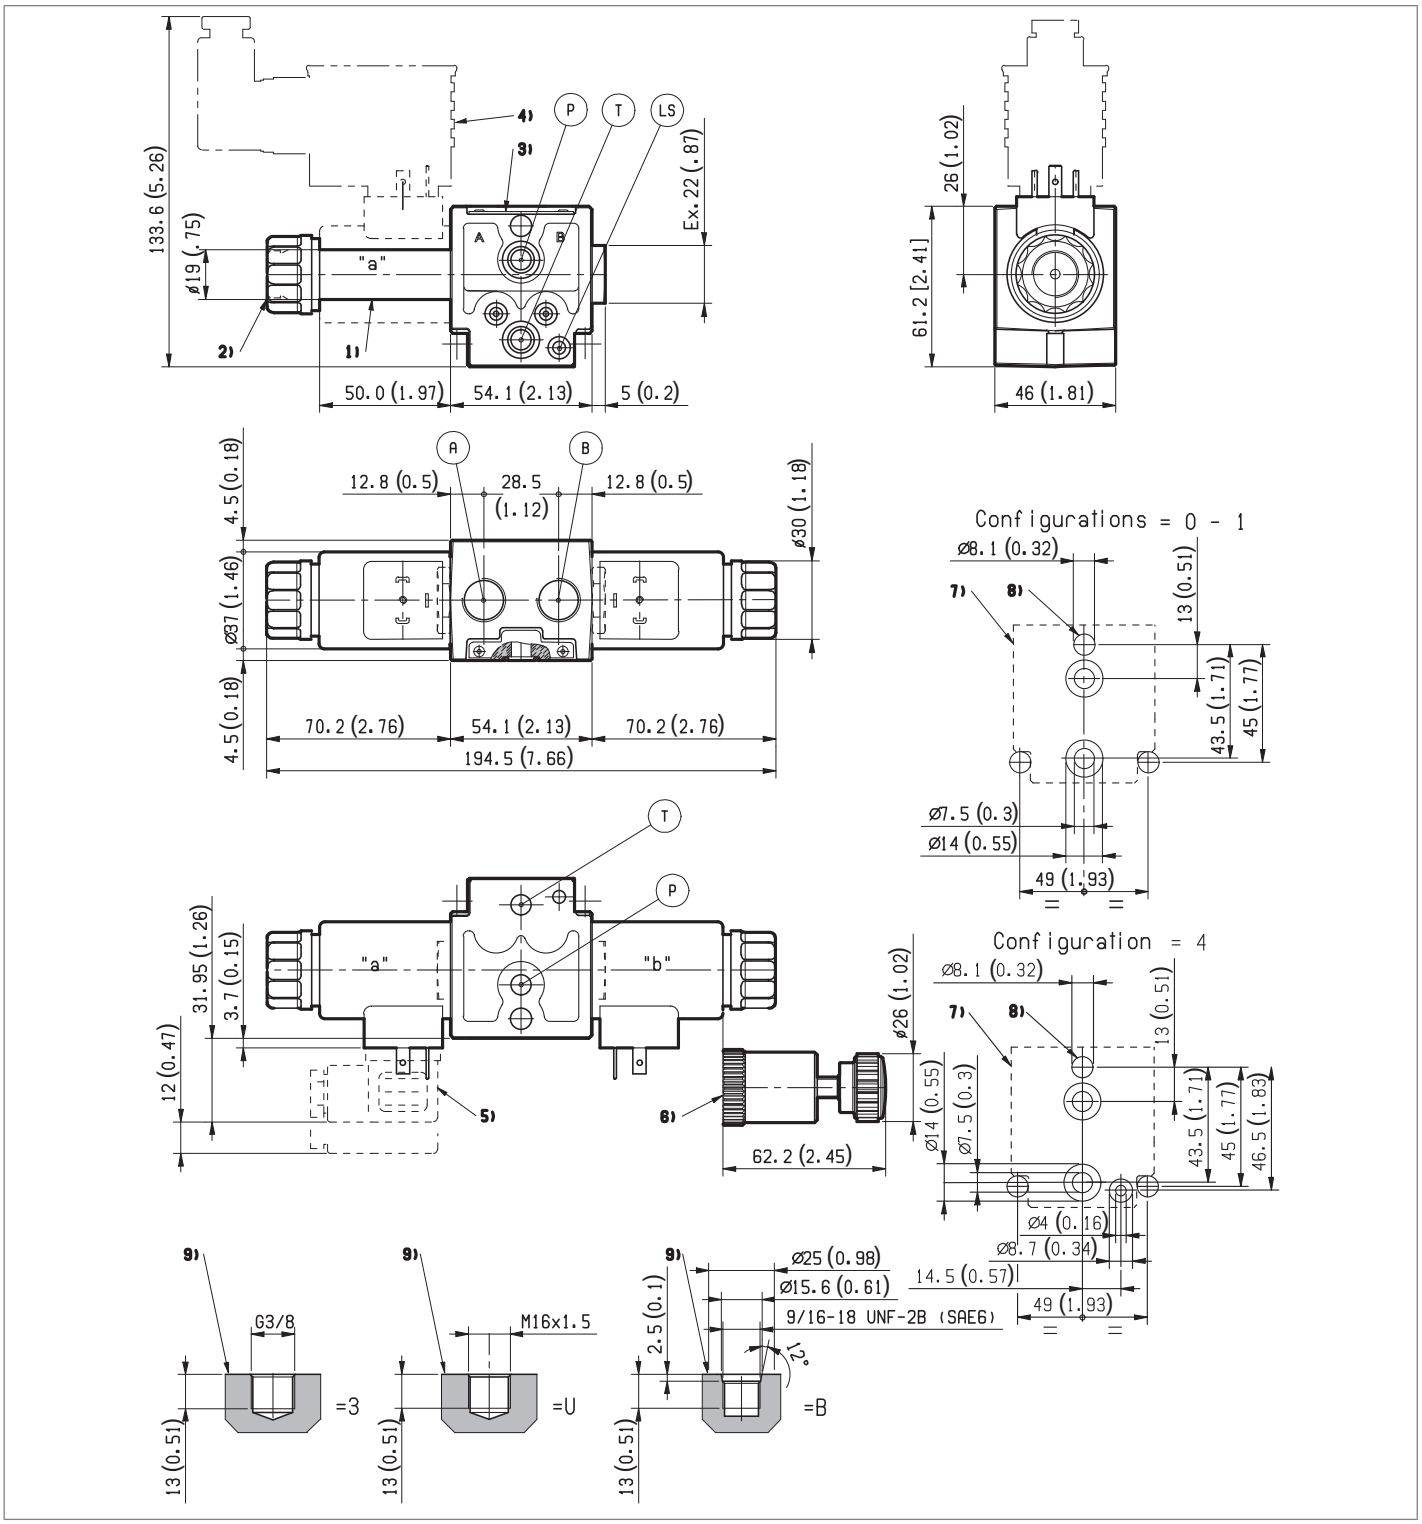
Ordering code S5: 17 l/min (4.50 gpm) with Δp 5 bar (73 psi) P>A,B.





Δp= valve pressure differential (inlet pressure Pp minus load Pl and minus return pressure Pt).

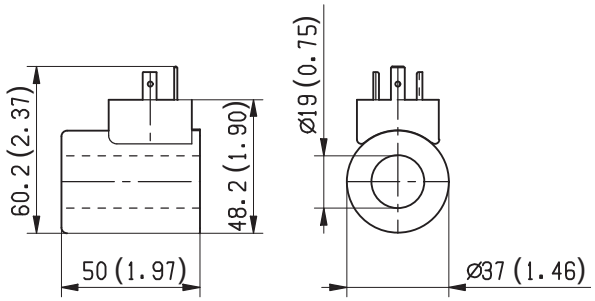
External dimensions and fittings



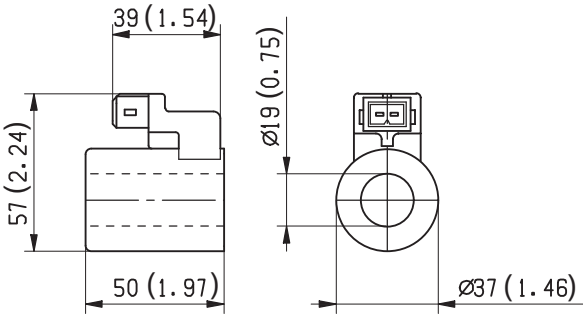
1 Solenoid tube Ø 19 mm (0.75 inch).
2 Ring nut for coil locking Ø 30 mm (1.18 In); torque 6–7 Nm (4.4 – 5.2 ft-lb).
3 Identification label.
4 Dimension with electronic feed regulator.
5 Clearance needed for connector removal.
6 Optional screw type manual override, EF type, for spool opening: it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut.
Mat no. R933003848.
7 Flange specifications for coupling to ED intermediate elements.
8 For tie rod and tightening torque information see data sheet RE 18301-90.
9 A and B ports.

Electric connection

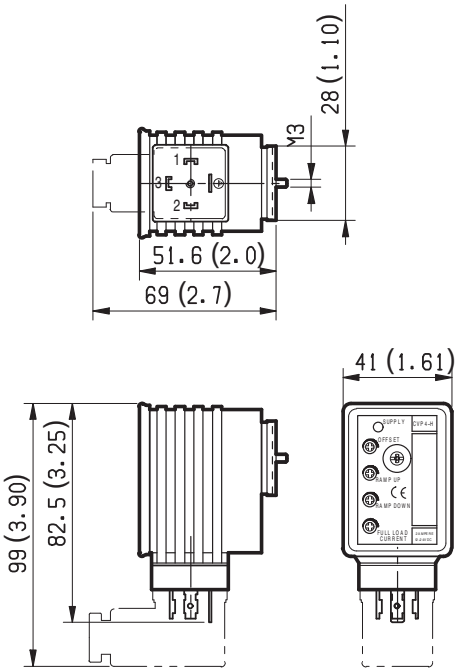
01 Protection class: IP 65 when connector with seal is properly screwed down.



03 Protection class: IP 65 with female connector properly fitted (see drawing).



Electronic feed regulator



Supply: yellow LED, lit up with power ON.
Off Set: minimum current adjustment. Adjust solenoid current so that the desired minimum value is obtained. Clockwise rotation increases current.
Ramp up: Ramping up time adjustment.
Ramp down: Ramping down time adjustment.
For longer ramping times, turn potentiometers clockwise; for shorter ramping times, turn the potentiometers counter-clockwise.
Full load current: Maximum current adjustment. Adjust solenoid current so that the desired maximum value is obtained (up to 2A). Clockwise rotation increases current.
Frequency adjustment: it is possible to set the PWM frequency obtaining the desired control sensitivity. After removing the external plastic cover, turn the adjusting screw; clockwise rotation increases frequency from 100 to 500 Hz.

Electronic feed regulator

General specifications

Valve elements with solenoid operated directional spool.
Control spools operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube; they can be energized by AC current through special connectors with rectifier (RAC).
Manual override (push-button or screw type) available as option.

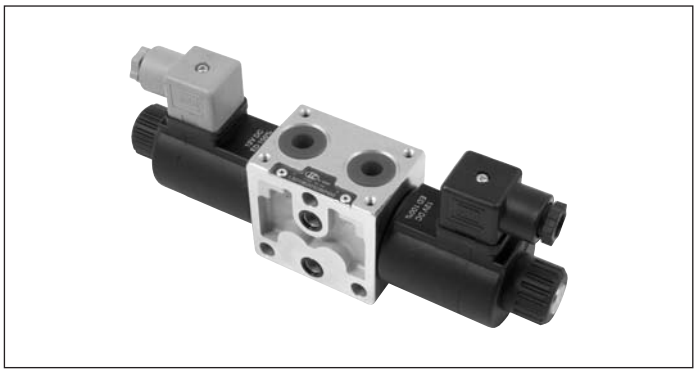
Bosch Rexroth AG, RE 18301-01/02.2016

4/3 - 4/2 Directional valve elements with or without secondary relief valves, with or without LS connections

L8_11... (ED2-DZ)

RE 18301-02
Edition: 02.2016
Replaces: 03.2014



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 50 l/min (13.2 gpm)
Port connections G 3/8 - SAE6 - G 1/2 - SAE8

General specifications

Valve elements with solenoid operated directional spool.
Control spools operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube; they can be energized by AC current through special connectors with rectifier (RAC).
Manual override (push-button or screw type) available as option.

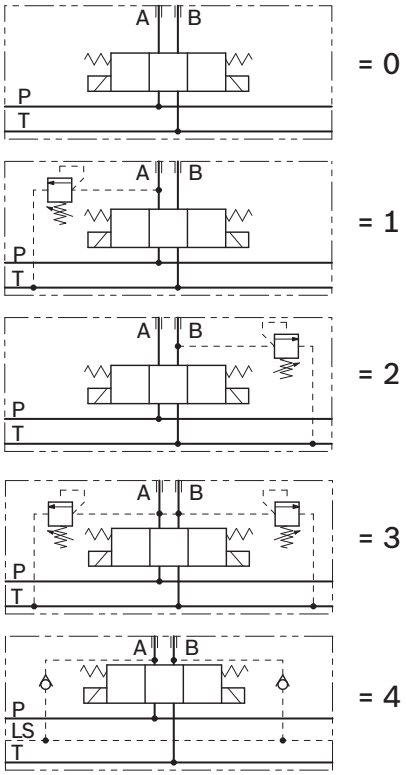
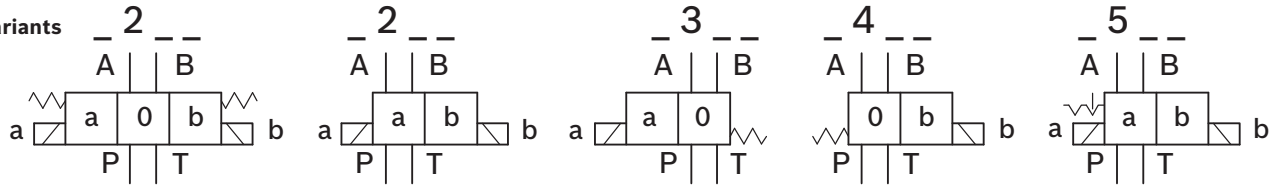
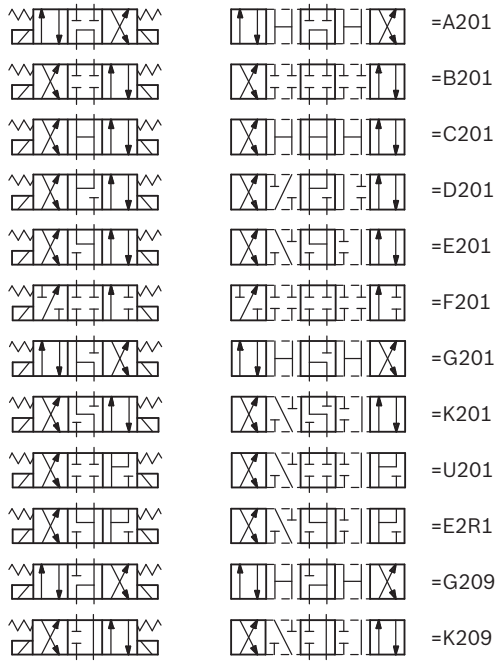
Symbols

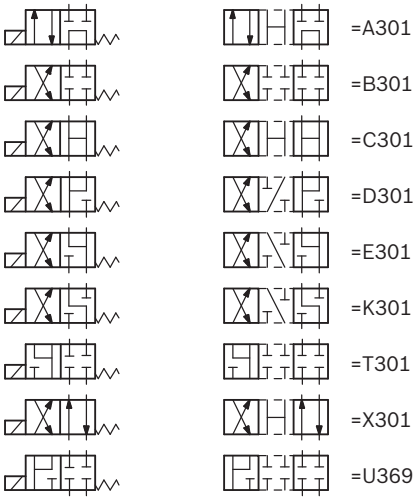


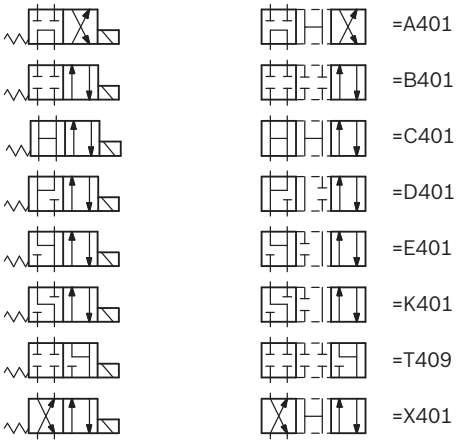
1) The required hydraulic symbol and spool variant can be chosen by consulting page 3.
2) Available only for A, B, E and F spool configurations. See page 9 for code details.
3) The secondary valves, with maximum flow capacity of 6 l/min (1.6 gpm), are available only for elements with port sizes G 3/8 and SAE 6.
4) Without secondary valves (versions L80_; L84_), the standard configuration corresponds to “0”.
5) For connectors ordering code see data sheet RE 18325-90.

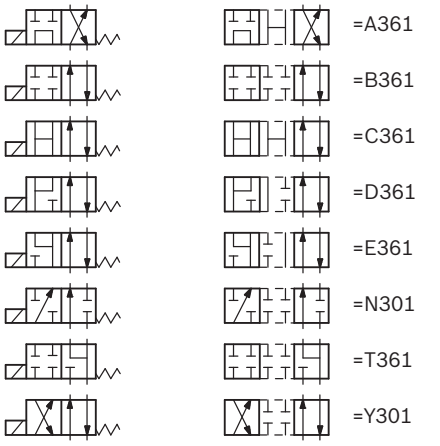
Spool variants

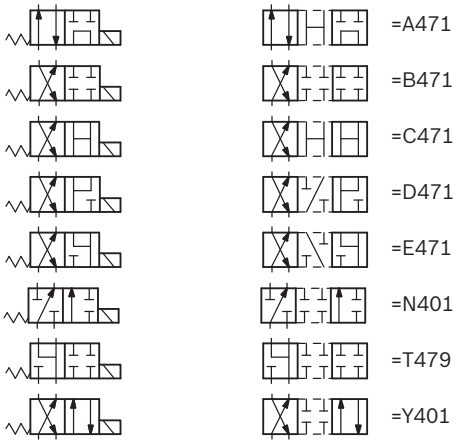




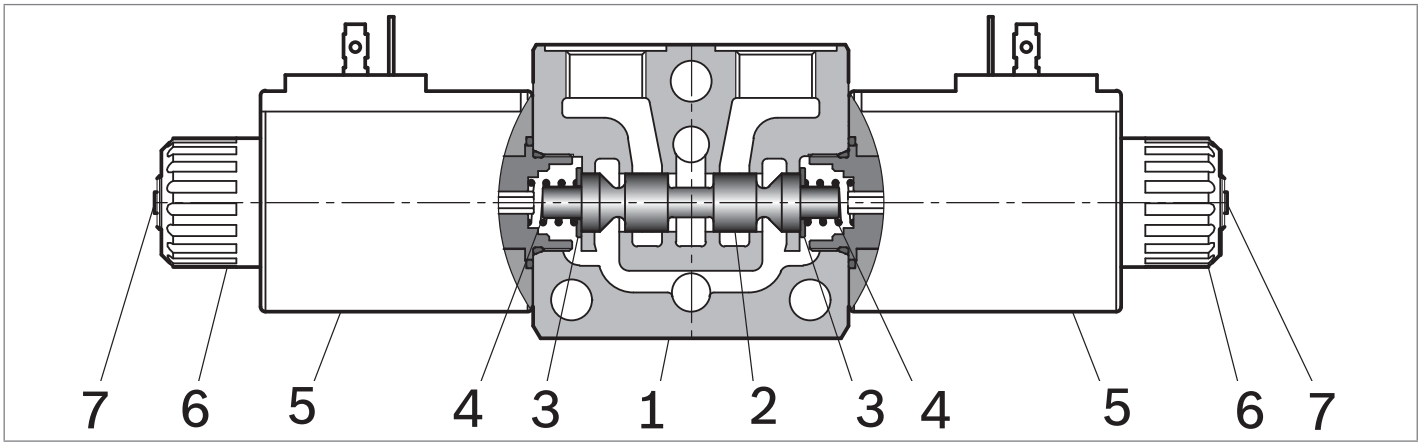








Functional description



The sandwich plate design directional valve elements L8_11... are compact direct operated solenoid valves which control the start, the stop and the direction of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**).
When energized, the force of the solenoid (5) pushes the control spool (**2**) from its neutral-central position “0” to the required end position “a” or “b”, and the required flow from P to A (with **B** to **T**), or P to B (with **A** to **T**) is achieved.
Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool returns in its neutral-central position.
Each coil is fastened to the solenoid tube by a ring nut (**6**).
A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General		
Valve element with 2 solenoids	kg (lbs)	1.95 (4.3)
Valve element with 1 solenoid	kg (lbs)	1.45 (3.2)
Valve element with 2 solenoids, with lever type emergency	kg (lbs)	2.2 (4.85)
Valve element with 1 solenoid, with lever type emergency	kg (lbs)	1.7 (3.75)
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic		
Maximum pressure at P, A and B ports	bar (psi)	310 (4500)
Maximum pressure at T	bar (psi)	250 (3625)
Max pressure, with lever type emergency at T	bar (psi)	200 (2900)
Maximum inlet flow	l/min (gpm)	50 (13.2)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.

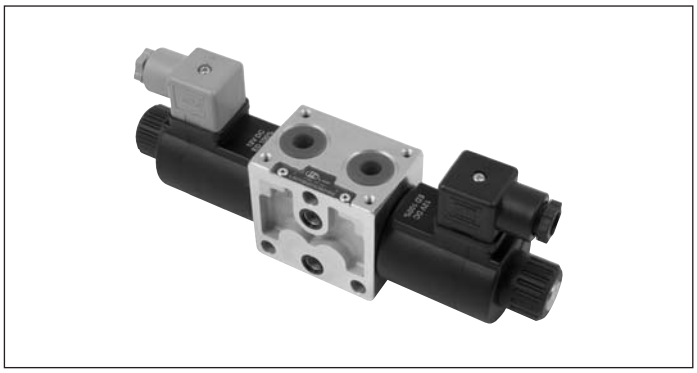
4/3 - 4/2 Directional valve elements with soft-shift

L8011... (ED2S-DZ)

RE 18301-03
Edition: 02.2016
Replaces: 02.2012



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 50 l/min (13.2 gpm)
Port connections G 3/8

General specifications

Valve elements with solenoid operated directional spool.
Switching time adjustment by calibrated orifices.
Control spools operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube; they can be energized by AC current through special connectors with rectifier (RAC).
Manual override (push-button or screw type) available as option.

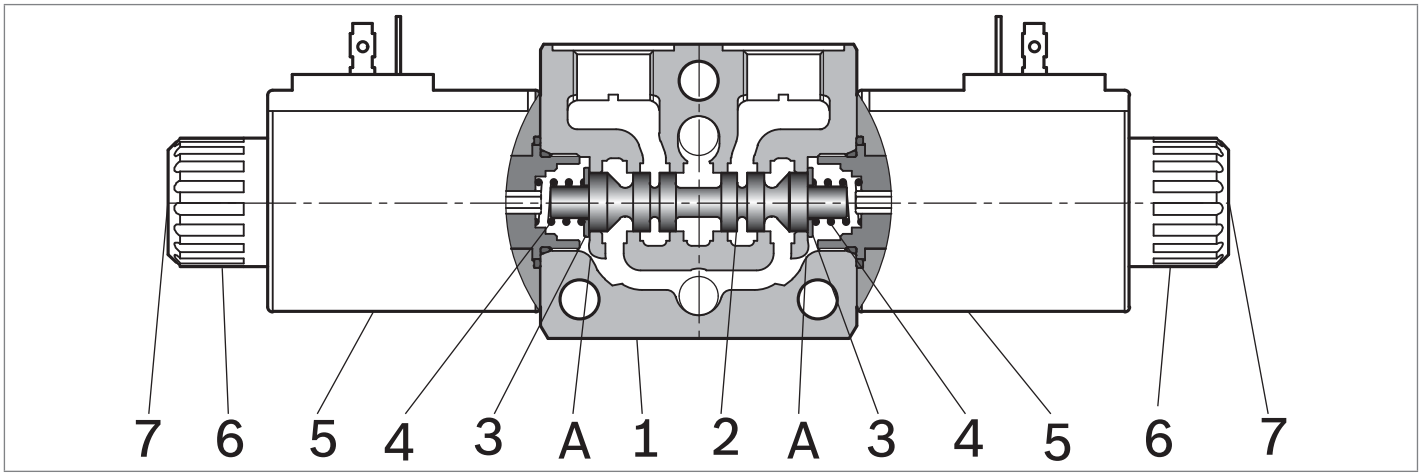
Installation note: in order to garantee the soft-shift function, it is reccomended to install in the „T“ line a check valve with the minimum cracking pressure of 1 bar (14,5 psi).

Bosch Rexroth AG, RE 18301-03/02.2016

Functional description



The sandwich plate design directional valve elements L8011... are compact direct operated solenoid valves which control the start, the stop and the direction of the oil flow, with the option to adjust the spool switching time.
These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**).
The spring chambers are connected to the tank port through orifices. When energized, the spool (**2**) travels and oil is pushed to tank from one of the spring chambers: if the cross section of the orifices changes, the switching time changes as well. Three orifice sizes are available: smaller orifice diameter results in longer switching time, even though the actual time is dependent upon pressure, flow and viscosity.
When energized, the force of the solenoid (**5**) pushes the control spool (**2**) from its neutral-central position to the required end position, and the required flow from P to A (with B to T), or P to B (with A to T) is achieved. Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool returns in its neutral-central position.
Each coil is fastened to the solenoid tube by a ring nut (**6**).
A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

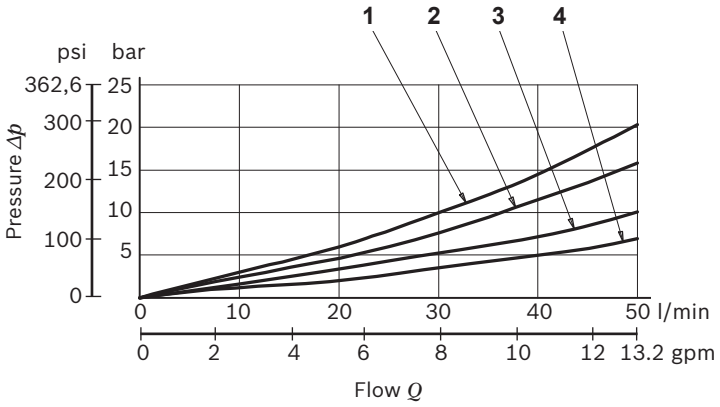
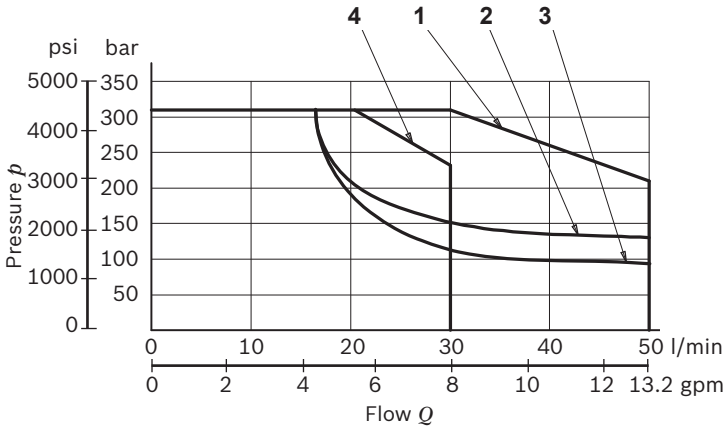
Characteristic curves



Spool Variant	Curve no.				
	P>T	P>A	P>B	A>T	B>T
A201, A301	2	1	1	1	1
B201, B301		3	3	3	3
C201, C301	4	3	3	4	4
E201, E301		3	3	4	4
X301, Y301		3	3	3	3

Measured with hydraulic fluid ISO-VG32 at 45° ±5 °C [113° ±9 °F]; ambient temperature 20 °C [68 °F].

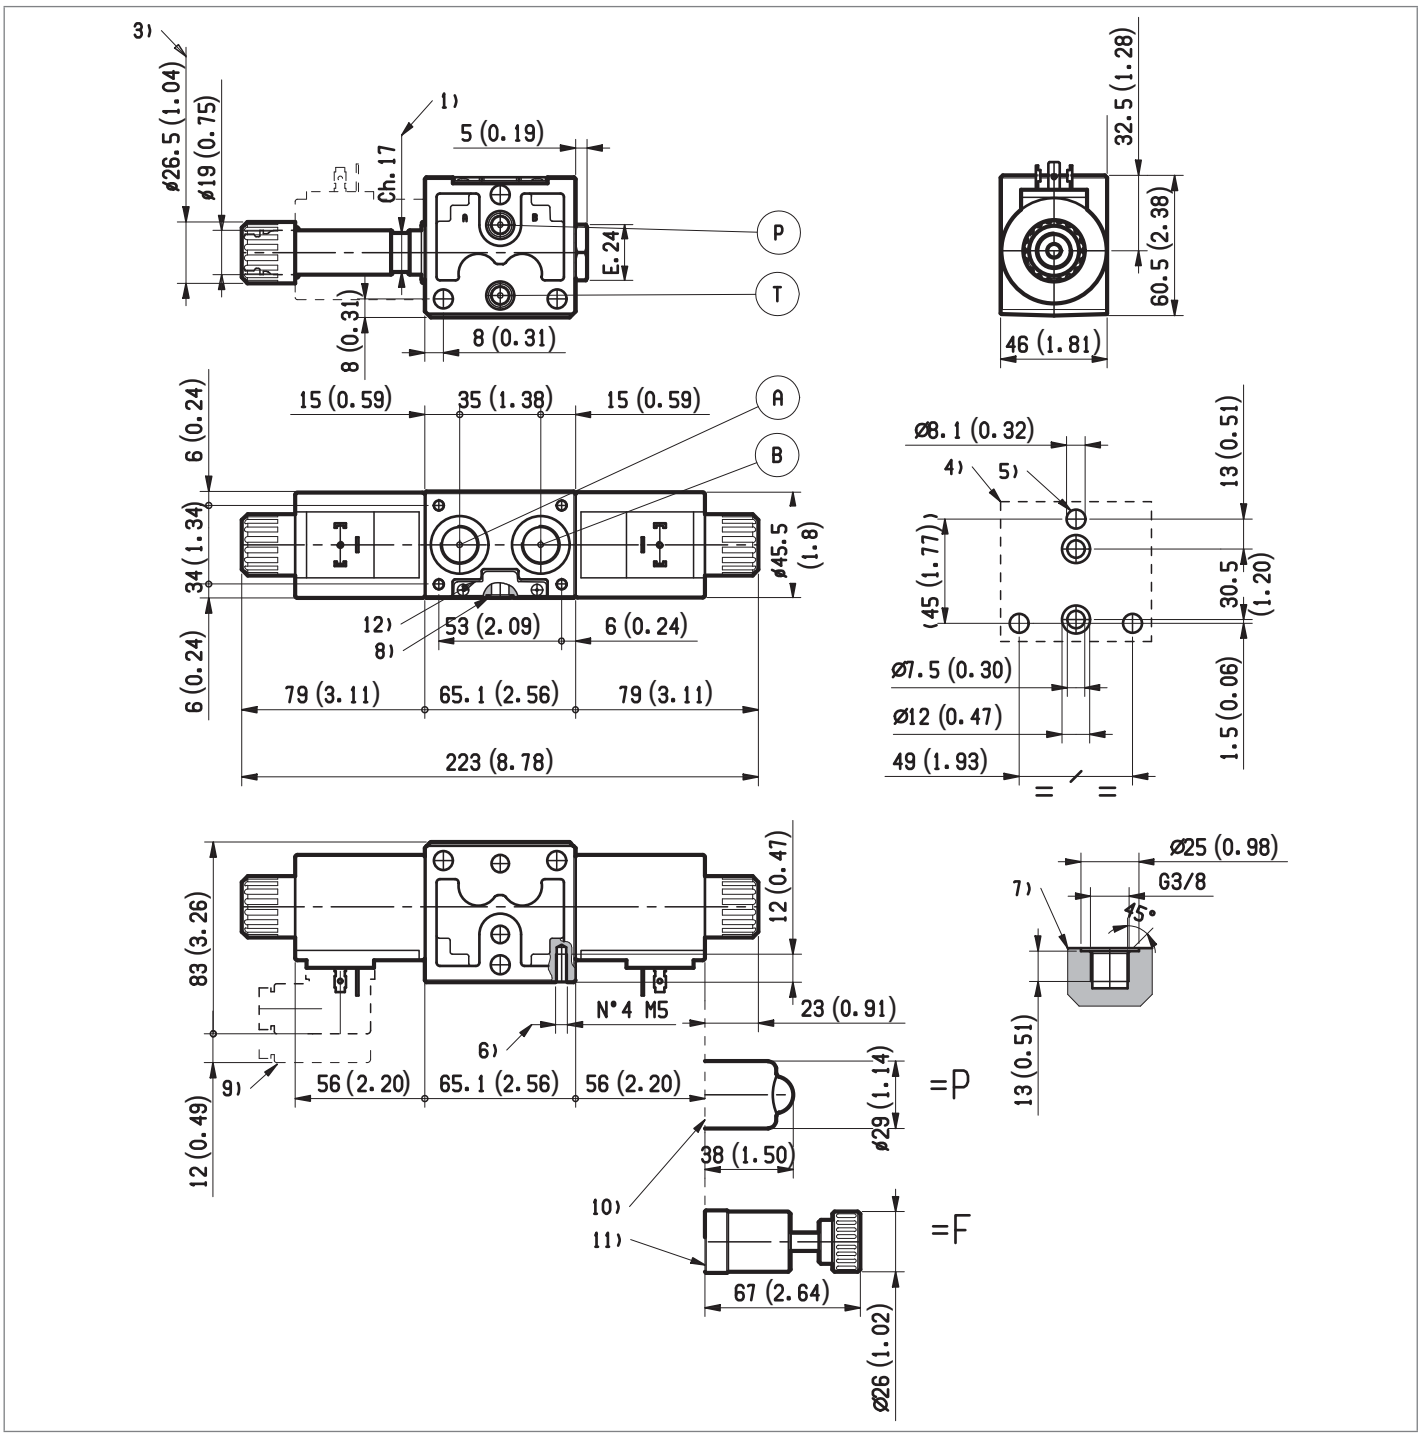
Performance limits



Spool Variant	Curve no.
A201, A301	1
B201, B301, C201, C301	2
E201, E301	3
X301, Y301	4

The performance curves are measured with flow going across and coming back, like P>A and B>T. With “lever type” emergency control, the performance limits are slightly lower.

External dimensions and fittings



1 Solenoid tube Ø 19 mm (0.75 inch).
3 Ring nut for coil locking (Ø 26,5 mm); torque 5-6 Nm (3.7-4.4 ft-lb).
4 Flange specifications for coupling to ED intermediate elements.
5 For tie rod and tightening torque information see data sheet RE 18301-90.
6 Four threaded holes M5 for fitting a secondary flangeable element. Bolts M5 with recommended strength class DIN 8.8: torque 5-6 Nm (3.6-4.4 ft-lb).
7 A and B ports.
8 O-Rings for P and T ports.
9 Clearance needed for connector removal.
10 Optional push-button, P type, for emergency spool opening: it is pressure stuck to the ring nut for coil locking. Mat. Number R933000043.
11 Optional screw type emergency, F type, for spool opening: it is screwed (torque 6-7 Nm (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat no. R933007215.
12 Identification label..

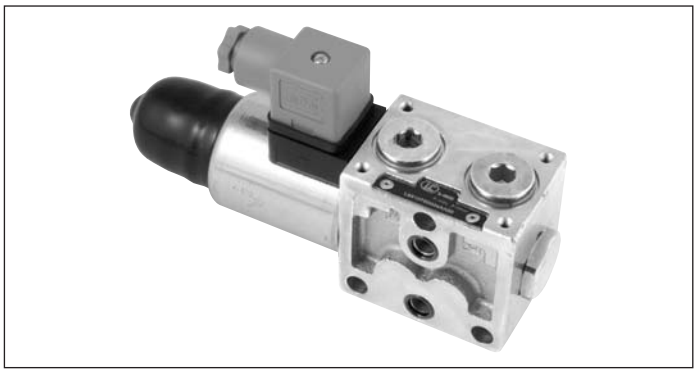
Directional valve elements with proportional control of Tank unloaded excess flow

L808003P... (ED4-PT)

RE 18301-04
Edition: 02.2016
Replaces: 07.2012



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 28 l/min (7.4 gpm)

General specifications

Valve element with direct proportional control of spool.
Proportional, non pressure compensated, valve element for partial or total unloading to Tank of P flow.
Control spool operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in normal position by return spring.
Wet pin proportional tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Manual override (push-button, screw or lever type) available as option.

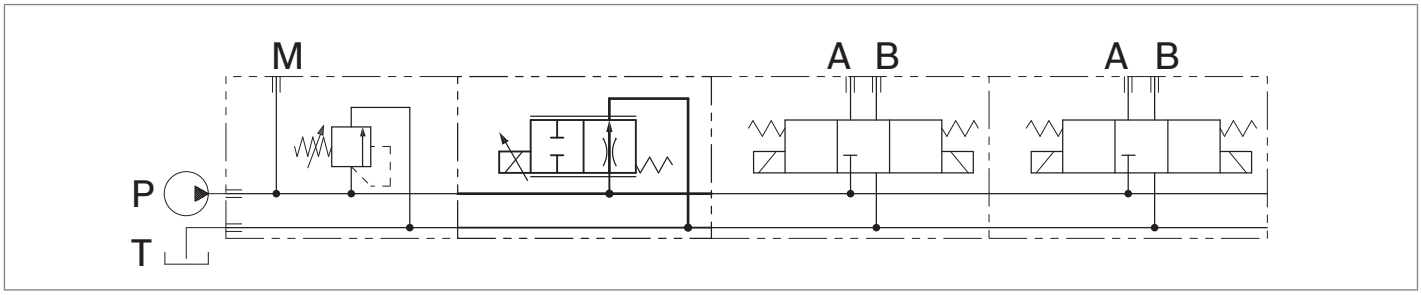
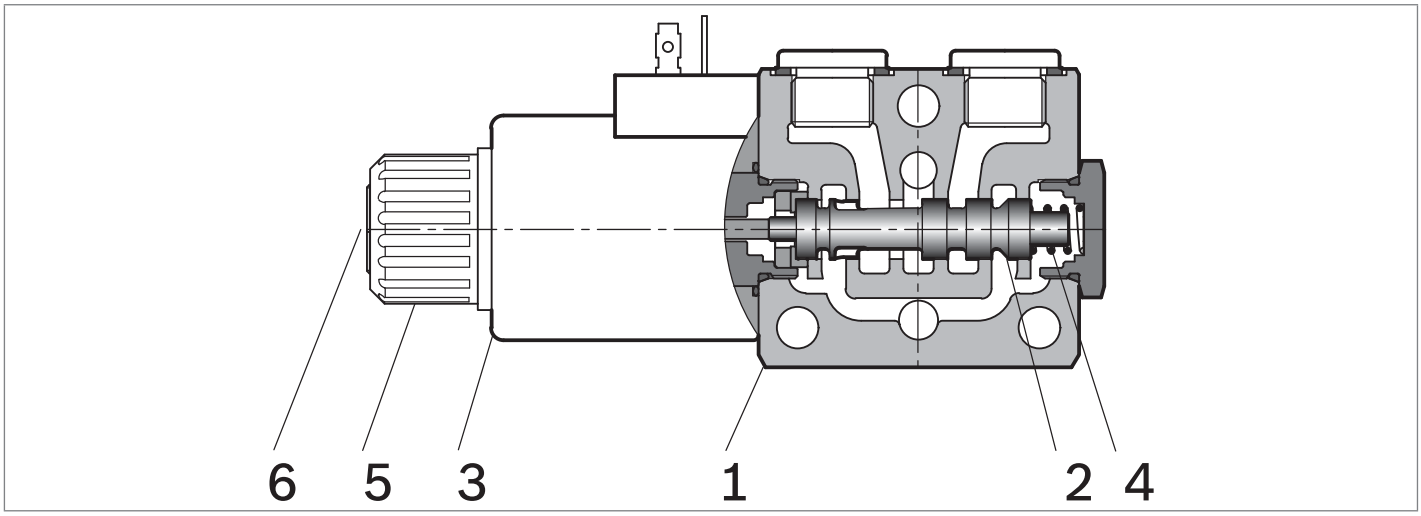
Example of application



Functional description



The sandwich plate design valve elements L808003P... are compact direct operated proportional solenoid valves which divert totally or partially the inlet P flow to Tank.
These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one solenoid (**3**), and one return spring (**4**).
With the solenoid de-energized, the return spring (**4**) keeps the spool (**2**) in its rest position “0” and all the inlet P flow passes through the valve and is unloaded to Tank. When energized by the electronic feed regulator, the solenoid (**3**) displaces the control spool (**2**) from its rest position proportionally to the current received and proportionally restricts the flow area to Tank. A regulated, non pressure compensated, oil flow is diverted from P to T and the remaining amount of inlet flow in the P line remains available for the downstream operators.
The coil (**3**) is fastened to the solenoid tube by a ring nut (**5**).
A pin (**6**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

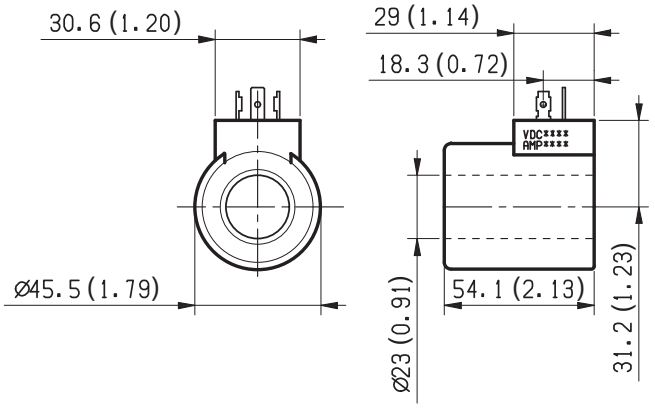
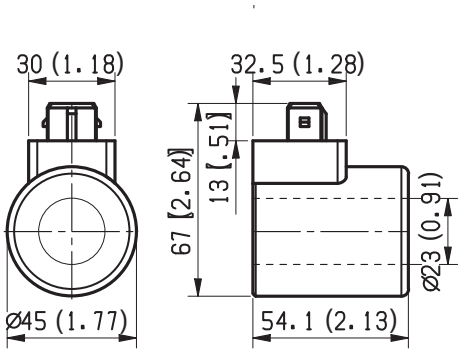
Electric connection

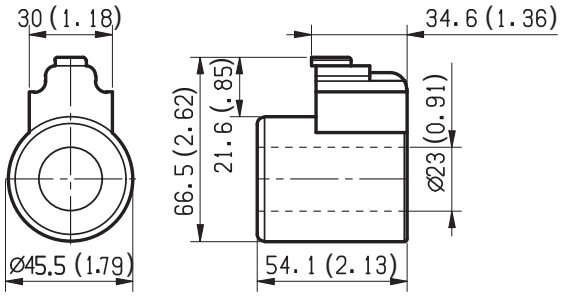
01 Protection class: IP 65 when connector with seal is properly screwed down.



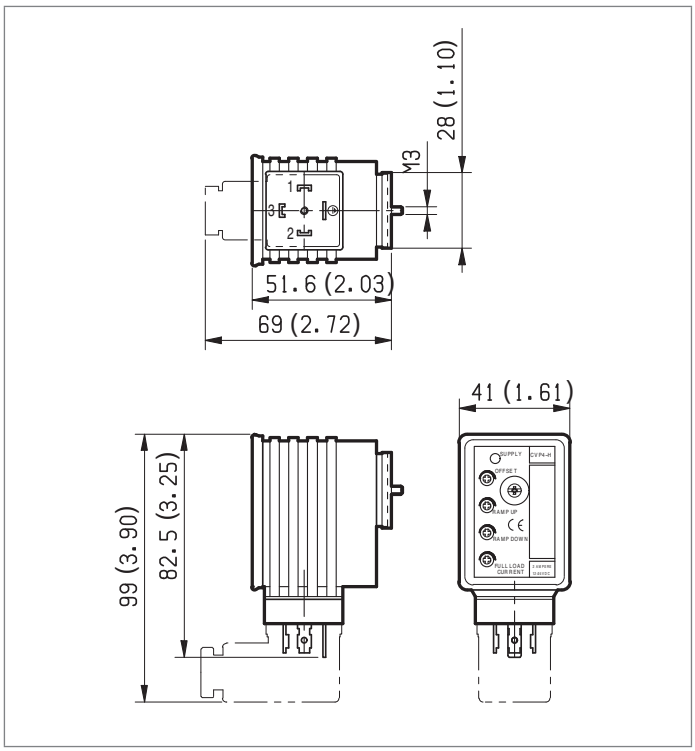
03 Protection class: IP 65 with female connector properly fitted (see drawing).



07 Protection class: IP 69 K with female connector properly fitted.



Electronic feed regulator



Supply: yellow LED, lit up with power ON.
Off Set: minimum current adjustment. Adjust solenoid current so that the desired minimum value is obtained. Clockwise rotation increases current.
Ramp up: Ramping up time adjustment.
Ramp down: Ramping down time adjustment.
For longer ramping times, turn potentiometers clockwise; for shorter ramping times, turn the potentiometers counter-clockwise.
Full load current: Maximum current adjustment. Adjust solenoid current so that the desired maximum value is obtained (up to 2A). Clockwise rotation increases current.
Frequency adjustment: it is possible to set the PWM frequency obtaining the desired control sensitivity. After removing the external plastic cover, turn the adjusting screw; clockwise rotation increases frequency from 100 to 500 Hz.

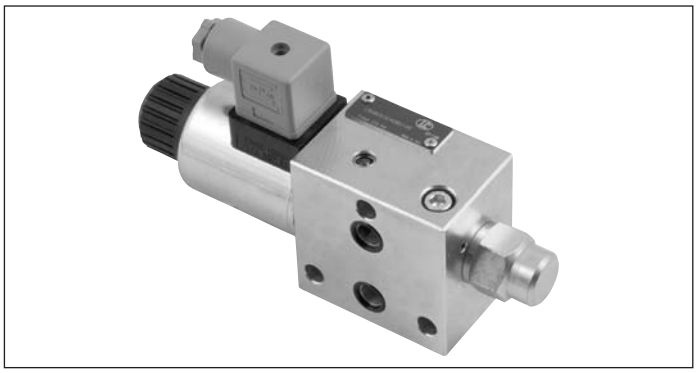
Directional valve elements with compensated proportional control of Tank unloaded excess flow

L808003C... (ED4-PTC)

RE 18301-05
Edition: 02.2016
Replaces: 07.2012



Size 6
Series 00
Maximum operating pressure 250 bar (3625 psi)
Maximum flow 40 l/min (10.6 gpm)

General specifications

Valve element with direct proportional pressure compensated control of inlet, P line, flow.
Three way pressure compensator included.
Wet pin proportional tube for removable DC coil.
In the de-energized condition, the control spool is held in normal position by return spring.
Solenoid tube with push rod for mechanical override; nickel plated surface.
Manual override (push-button, screw type) available as option.
Plug-in connectors available: EN 175301-803 (Was DIN 43650) and DT04-2P (Deutsch).

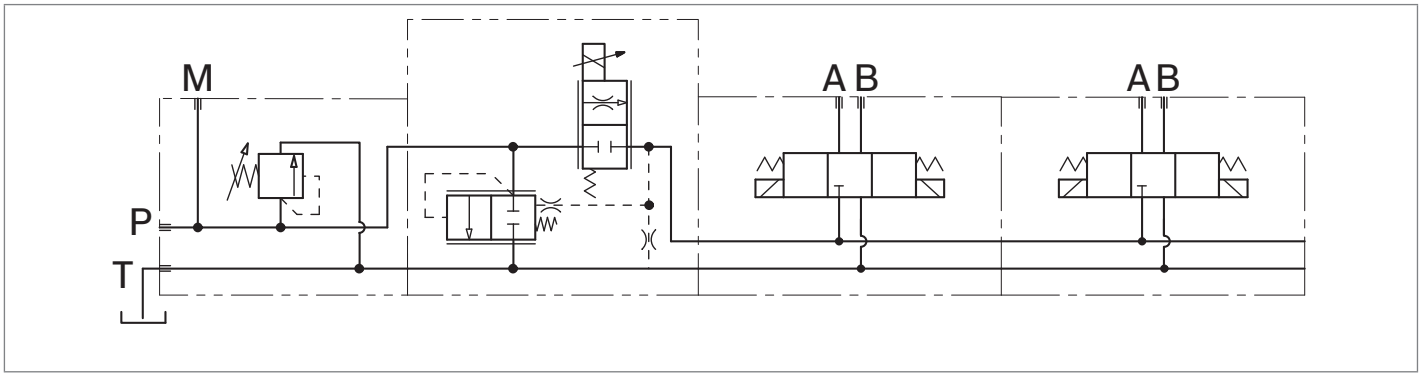
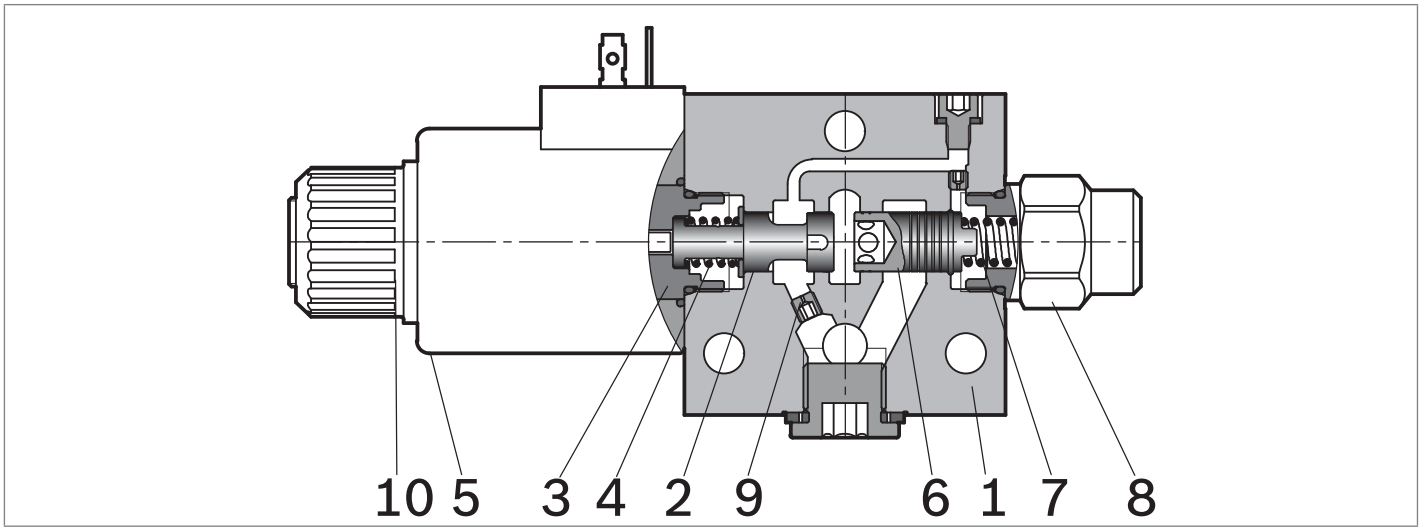
Example of application



Functional description



The sandwich plate design elements L808003C... are 3 way proportional pressure compensated direct solenoid operated valves. They control the inlet (P) flow and allow through (out of P1) only the flow required by the downstream operators; the excess oil, pressurized at working pressure, is diverted from the inlet P line to Tank.
The combination of the proportional regulator with the unloading compensator guarantees stable and constant flow, independently from the working pressure.
The proportional control is achieved by a wet pin proportional screwed-in tube, with removable coil which is energized by an external electronic feed regulator; the electronic regulator performs an “open loop” control of the current supplied to the coil.
These elements basically consist of a stackable housing (**1**) with a control spool (**2**), a solenoid (**3**), and one return spring (**4**); additionally there is a compensator (**6**), with a preset spring (**7**), a spring retainer plug (**8**) and a drain orifice (**9**). A coil (**5**) is held to the solenoid tube by the ring nut (**10**).
With the solenoid de-energized, the spool stays in the closed position; the pressure overcomes the compensator spring (**7**) and the inlet (P) oil is unloaded to Tank at the Δp value shown by the characteristic curve. Pressure at (P1) is drained to Tank through the orifice and drops to zero.
By energizing the solenoid (**3**) through the electronic feed regulator, the control spool (**2**) is displaced from its rest position proportionally to the current; the corresponding opening allows a pressure compensated flow to proceed to P1, while the excess flow is diverted to Tank.

With the solenoid (**3**) de-energized, the return spring (**4**) pushes the spool (**2**) to its rest position “0” fully closed. No flow goes to P1 and any residual pressure at P1 is drained through the orifice. The compensator (**6**) is pushed fully open all the oil is unloaded to Tank.

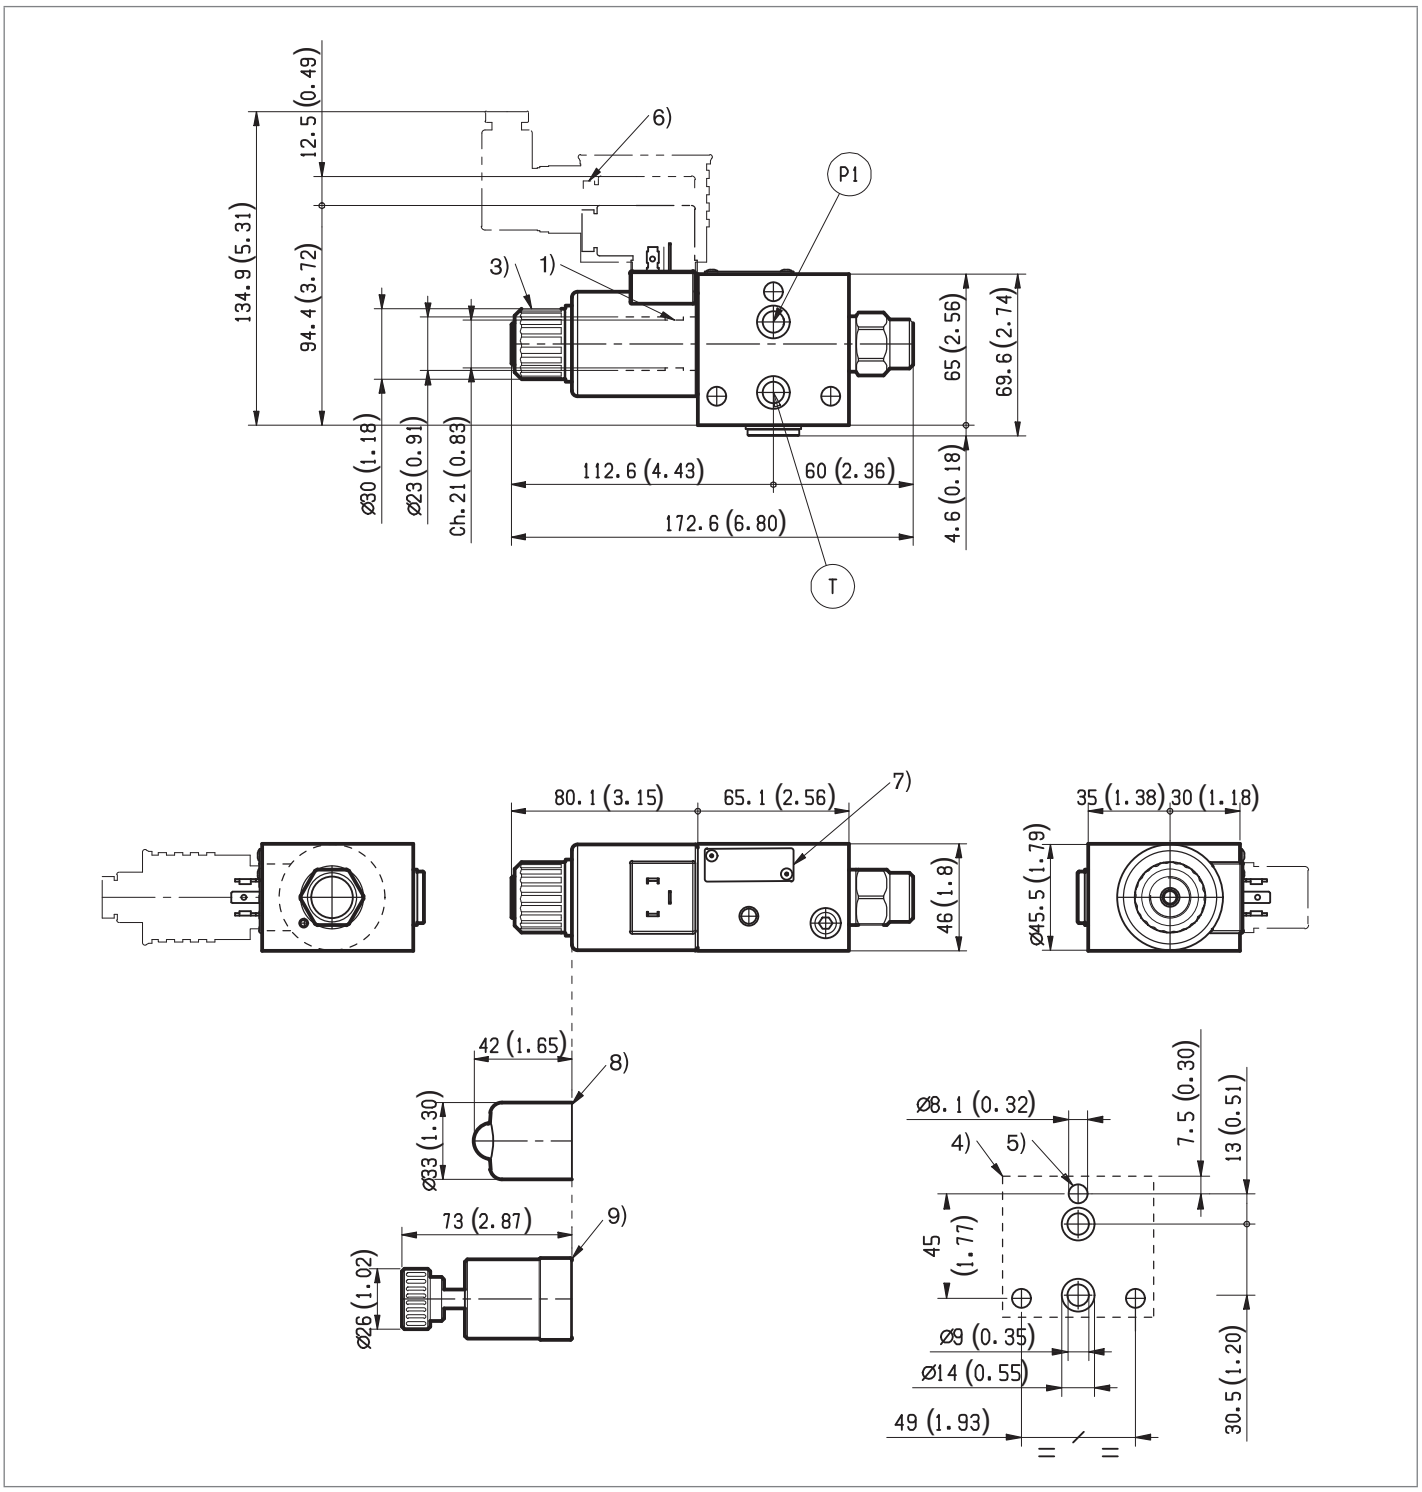
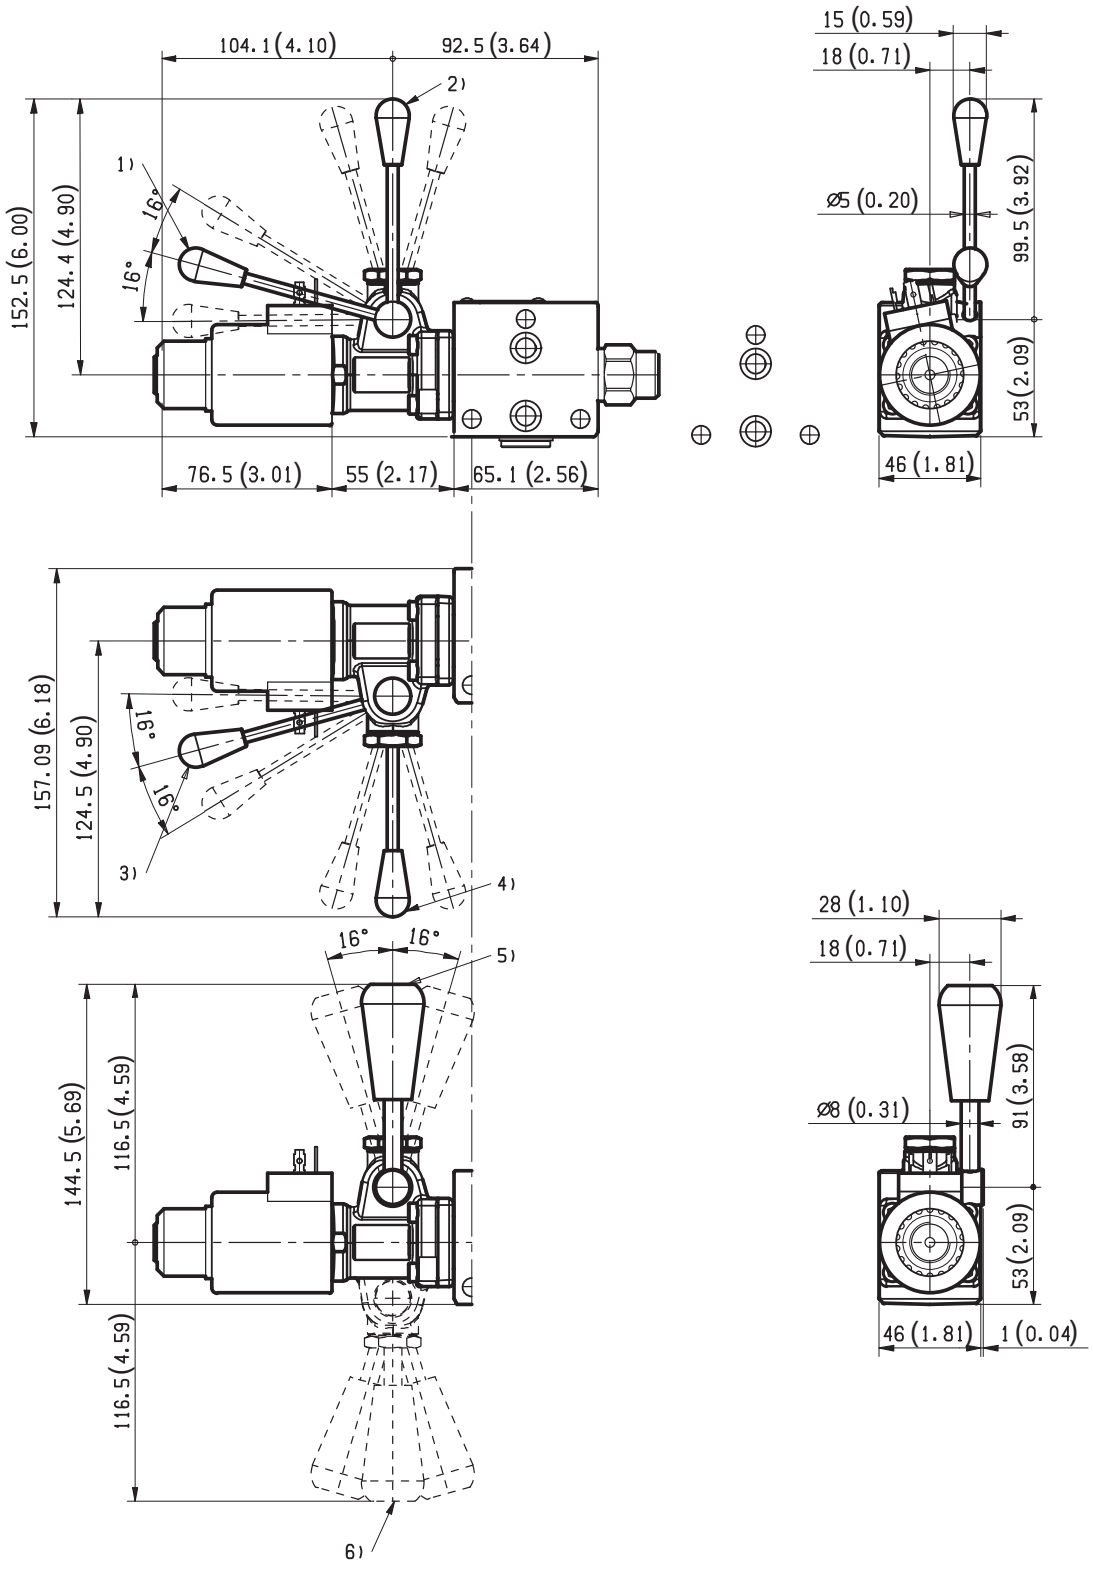
External dimensions and fittings



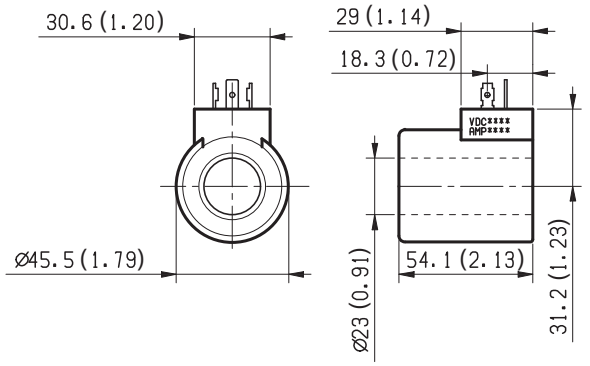
1 Solenoid tube Ø 23 (0.9 inch).
3 Ring nut for coil locking (Ø 30.3 mm (1.18 inch)); torque 6–7 Nm (4.4 – 5.2 ft-lb).
4 Flange specifications for coupling to ED intermediate elements.
5 For tie rod and tightening torque information see data sheet RE 18301-90.
6 Clearance needed for connector removal.
7 Identification label.
8 Optional push-button manual override, 0P type, for spool opening: it is pressure stuck to the ring nut for coil locking. Mat no. R933003289.
9 Optional screw type manual override, 0F type, for spool opening: it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat no. R933003116.



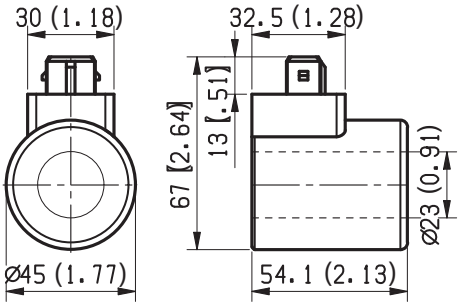
1 Ordering Details: HA (if fitted to side A) or HB (if fitted to side B)
2 Ordering Details: VA (if fitted to side A) or VB (if fitted to side B)
3 Ordering Details: H1 (if fitted to side A) or H9 (if fitted to side B)
4 Ordering Details: V1 (if fitted to side A) or V9 (if fitted to side B)
5 Ordering Details: XA (if fitted to side A) or XB (if fitted to side B)
6 Ordering Details: X1 (if fitted to side A) or X9 (if fitted to side B)

Electric connection

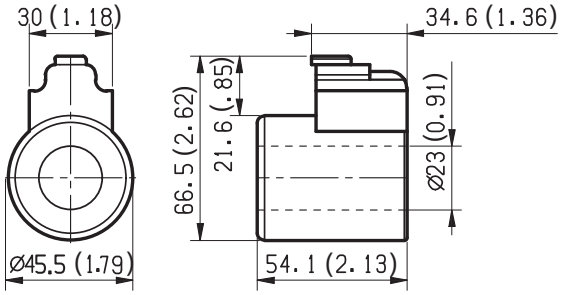
01 Protection class: IP 65 when connector with seal is properly screwed down.



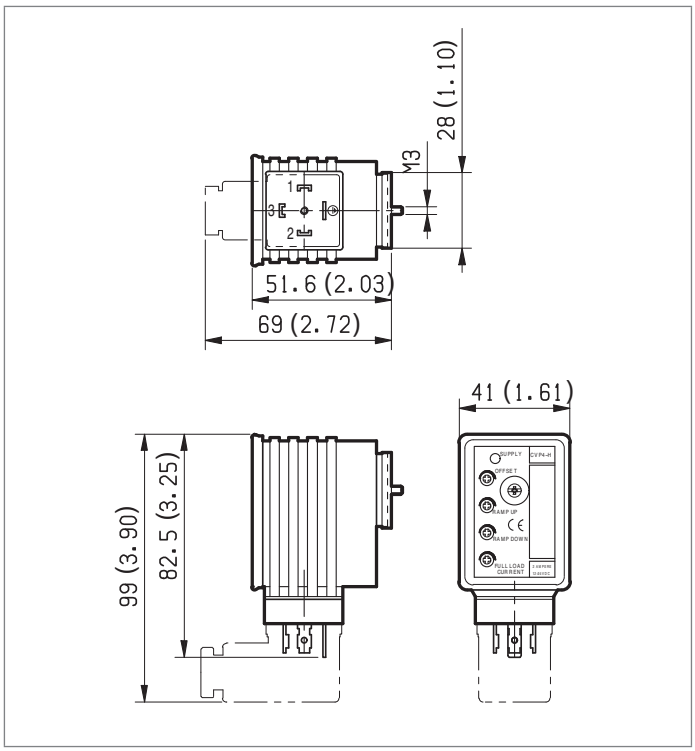
03 Protection class: IP 65 with female connector properly fitted (see drawing).



07 Protection class: IP 69 K with female connector properly fitted.



Electronic feed regulator



Supply: yellow LED, lit up with power ON.
Off Set: minimum current adjustment. Adjust solenoid current so that the desired minimum value is obtained. Clockwise rotation increases current.
Ramp up: Ramping up time adjustment.
Ramp down: Ramping down time adjustment.
For longer ramping times, turn potentiometers clockwise; for shorter ramping times, turn the potentiometers counter-clockwise.
Full load current: Maximum current adjustment. Adjust solenoid current so that the desired maximum value is obtained (up to 2A). Clockwise rotation increases current.
Frequency adjustment: it is possible to set the PWM frequency obtaining the desired control sensitivity. After removing the external plastic cover, turn the adjusting screw; clockwise rotation increases frequency from 100 to 500 Hz.

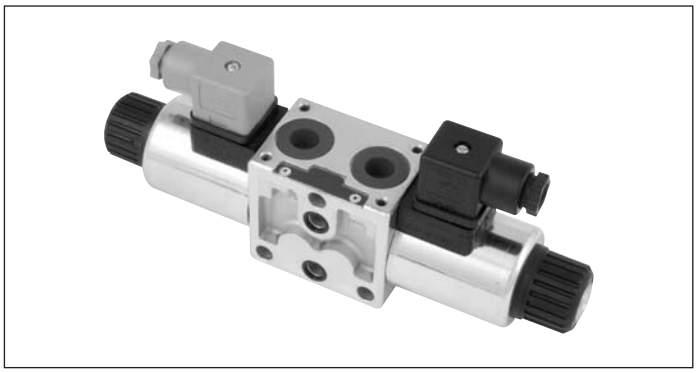
4/3 - 4/2 Directional valve elements with proportional control and with or without LS connections

L8_80... (ED4-P)

RE 18301-06
Edition: 02.2016
Replaces: 07.2015



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 40 l/min (10.5 gpm)
Port connections G 3/8 - G 1/2 - SAE6 - SAE8

General specifications

Valve element with direct proportional control of spool.
Control spool operated by solenoid with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin proportional tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Manual override (push-button or screw type) available as option.
Plug-in connectors available: EN 175301-803 (Was DIN 43650) and DT04-2P (Deutsch).

Spool variants

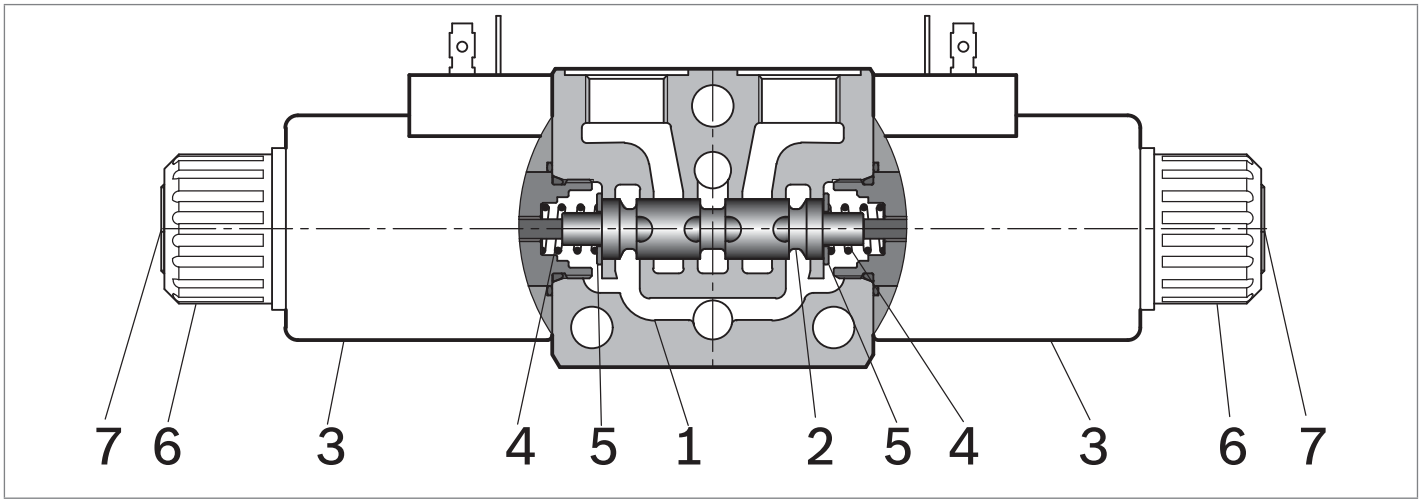
In neutal position, the valves cross section are as follows:
E_I ≥ 20% of nominal cross section.
E_S ≥ 2% of nominal cross section.

Functional description



The sandwich plate design directional valve elements L8080... are compact direct operated proportional solenoid valves which control the start, the stop, the direction and the quantity of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one or two solenoids (**3**), and one or two return springs (**4**).
Energized by an electronic feed regulator, each solenoid (**3**) displaces the control spool (**2**) from its neutral-central position “0” proportionally to the current received; a regulated oil flow P to A, or P to B, is achieved. Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**5**) back against the housing and the spool returns in its neutral-central position.
Each coil (**3**) is fastened to the solenoid tube by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General			
Valve element with 2 solenoids		kg (lbs)	2.20 (4.85)
Valve element with 1 solenoid		kg (lbs)	1.70 (3.75)
Ambient Temperature		°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic			
Maximum pressure at P		bar (psi)	310 (4500)
Maximum pressure at T		bar (psi)	210 (3050)
Maximum inlet flow		l/min (gpm)	40 (10.5)
Nominal flow with DP P>T = 10 bar (145 psi)		l/min (gpm)	10, 20, 30, 40 (2.64, 5.28, 7.9, 10.5)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:			Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.

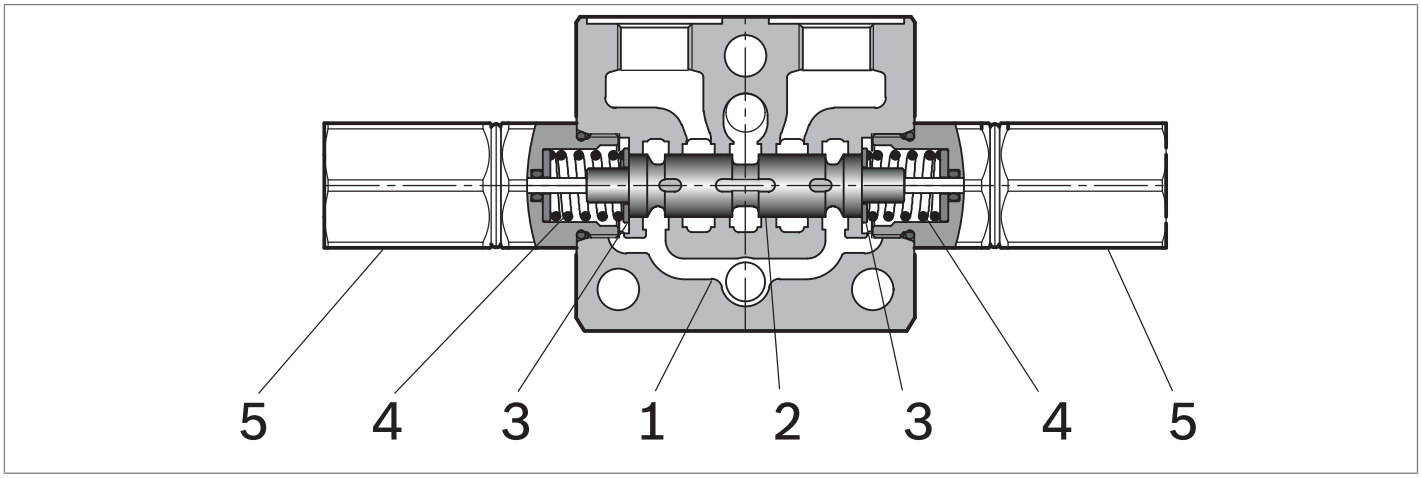
Functional description



The sandwich plate design directional valve elements L8_ P5... are compact direct hydraulic operated valves which control the start, the stop and the direction of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), two hydraulic operating blocks (**5**), and two return springs (**4**).

The hydraulic pressure in one of the blocks (**5**) pushes the control spool (**2**) from its neutral-central position “0” to the required end position “a” or “b”, and the required flow from P to A (with B to T), or P to B (with A to T) is achieved. When pressure is removed from either one of blocks (**5**), the return spring (4) pushes the spool thrust washer (**3**) back against the housing and the spool returns in its neutral-central position “0”.

Spool variants

Side with the control lever

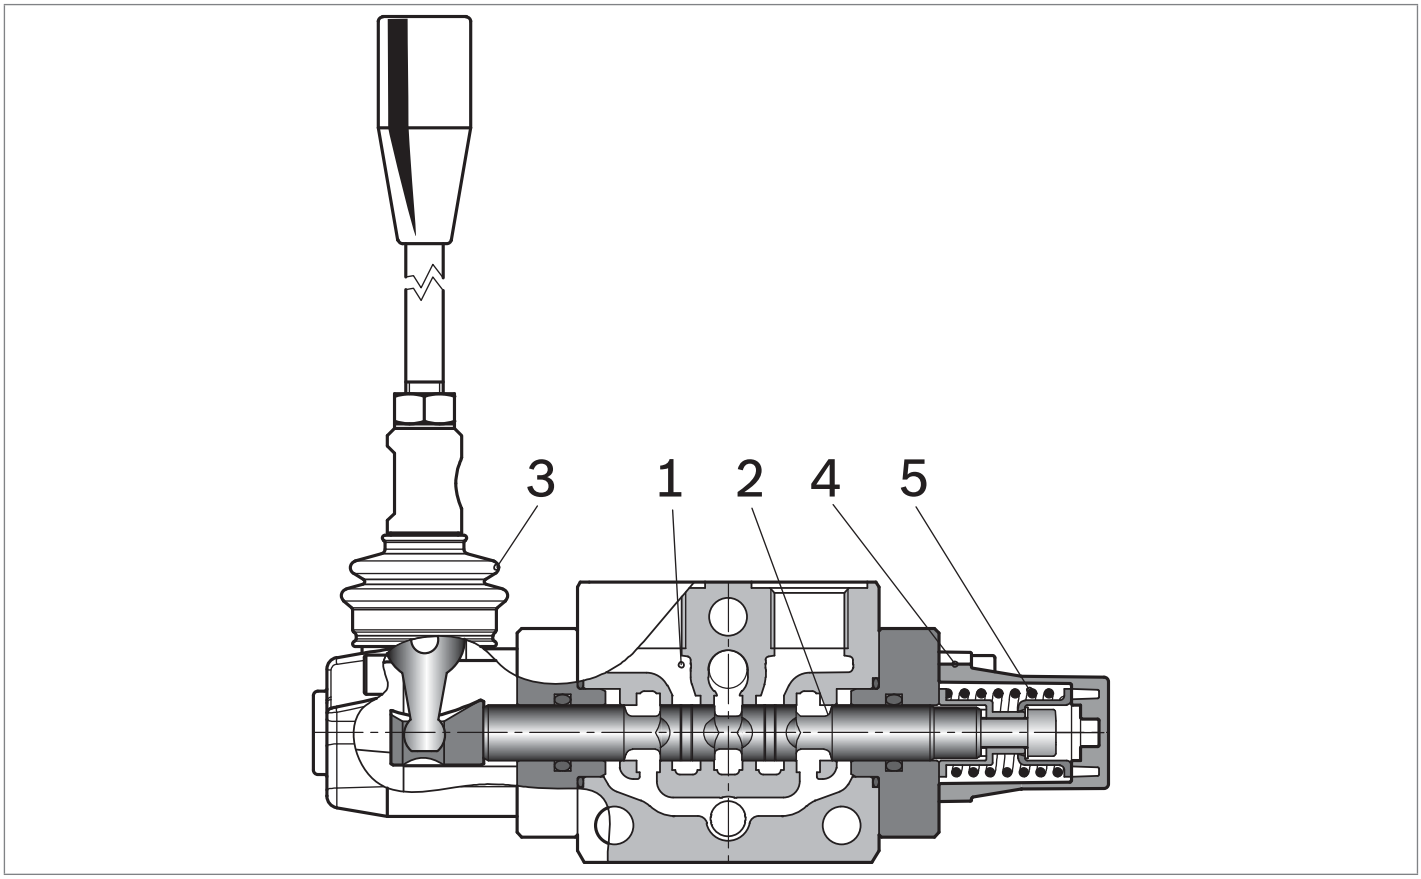
1) Only meter in for E2S8 spool variant
2) With Δp (P > T) 10 bar (145 psi), corresponding approx. to Δp P>A,B 5 bar (73 psi).
3) Available only for B_, E_ spool variants.

Functional description



The sandwich plate design directional valve elements L8_1... are compact manual operated valves which control the start, the stop and the direction of the oil flow.
These elements basically consist of a stackable housing (**1**) with a control spool (**2**), a block with the control lever (**3**), and a spring housing (**4**) with a return spring (**5**).
The hand operated lever moves the control spool (**2**) from its neutral-central position “0” to the required position “a” or “b”, and the required flow from P to A (with B to T), or P to B (with A to T) is achieved.
Type L8_L1_2S_ __M100 is the valve version in which the return spring (**5**) brings the spool back to neutral-central position “0” when the manual lever is not operated.
The valve is available with a choice of spool variants (refer to page 2).
Type L8_L1_2S_ __F100 is the valve version with mechanical detent in which the control spool (**2**) stays in anyone of the 3 achieved positions “0”, “a” or “b” when the lever is left free. With this valve, the oil delivery can continue without any action on the lever.
Also this version is available with a choice of spool variants (refer to page 2).
Special types of control are available upon request.

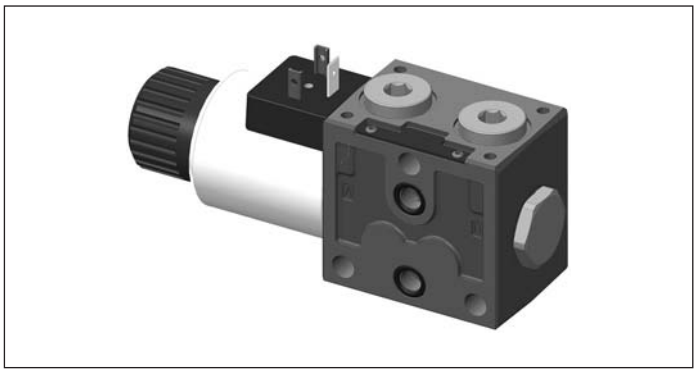
Directional valve elements with proportional control of Tank unloaded excess flow

L808103P... (ED4-PT1)

RE 18301-13
Edition: 09.2016
Replaces: 01.2016



- Size 6
- Series 00
- Maximum operating pressure 310 bar (4500 psi)
- Maximum flow 35 l/min (9.2 gpm)

General specifications

- Valve element with direct proportional control of spool.
- Proportional, non pressure compensated, valve element for partial or total unloading to Tank of P flow.
- Control spool operated by solenoids with removable coils.
- In the de-energized condition, the control spool is held in normal position by return spring.
- Wet pin proportional tubes for DC coils, with push rod for mechanical override; nickel plated surface.
- Manual override (push-button, screw or lever type) available as option.

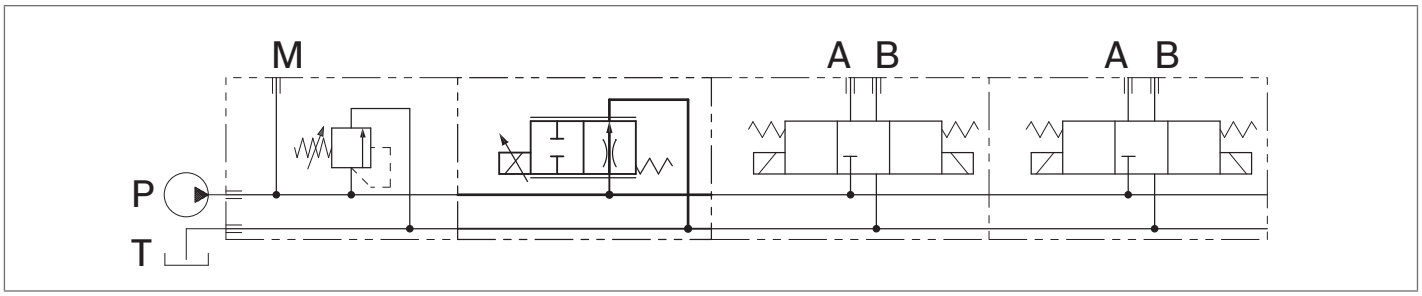
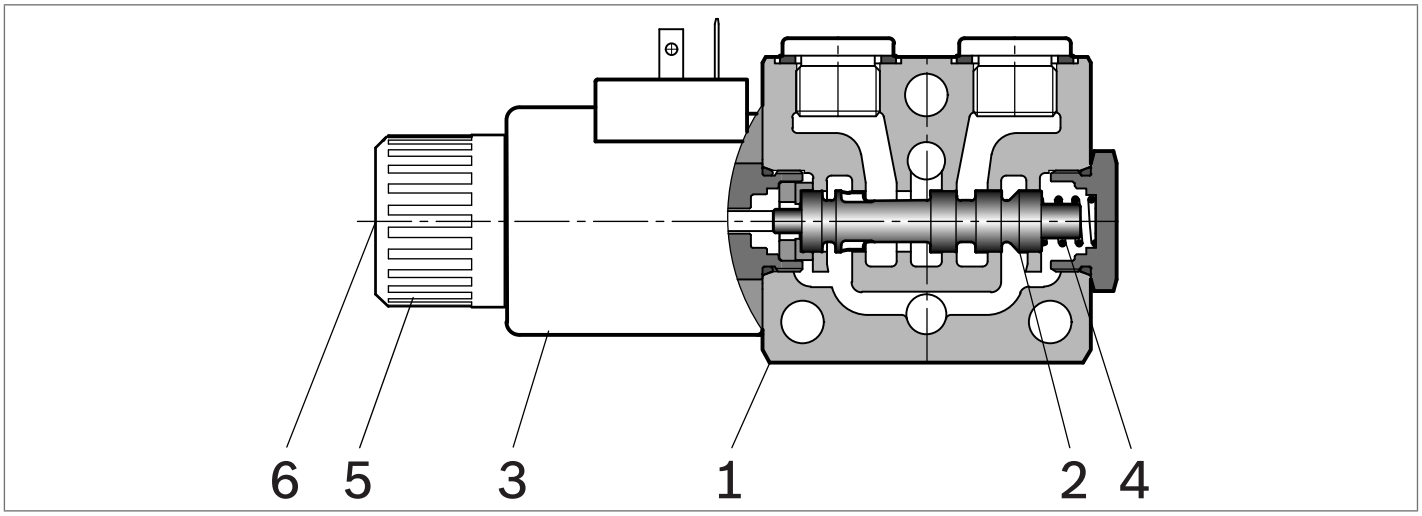
Example of application



Functional description



The sandwich plate design valve elements L808103P... are compact direct operated proportional solenoid valves which divert totally or partially the inlet P flow to Tank.
These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one solenoid (**3**), and one return spring (**4**).
With the solenoid de-energized, the return spring (**4**) keeps the spool (**2**) in its rest position “0” and all the inlet P flow passes through the valve and is unloaded to Tank. When energized by the electronic feed regulator, the solenoid (**3**) displaces the control spool (**2**) from its rest position proportionally to the current received and proportionally restricts the flow area to Tank. A regulated, non pressure compensated, oil flow is diverted from P to T and the remaining amount of inlet flow in the P line remains available for the downstream operators.
The coil (**3**) is fastened to the solenoid tube by a ring nut (**5**).
A pin (**6**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

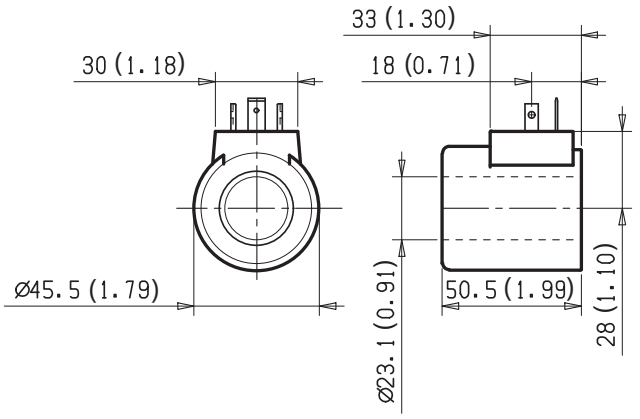
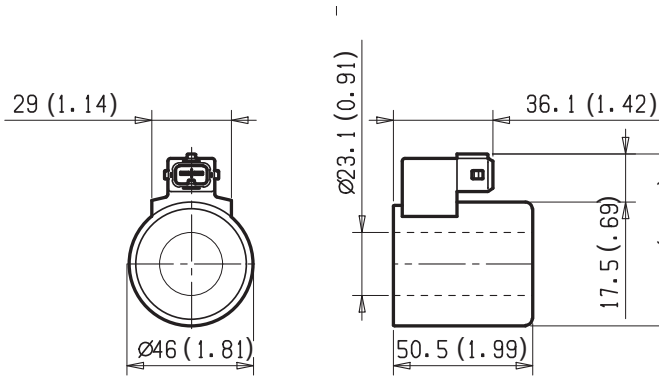
Electric connection

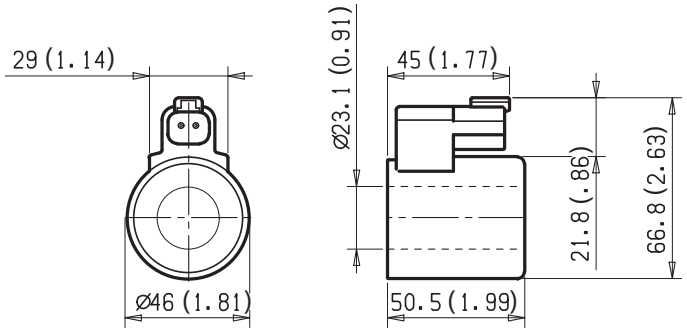
01 Protection class: IP 65 when connector with seal is properly screwed down.



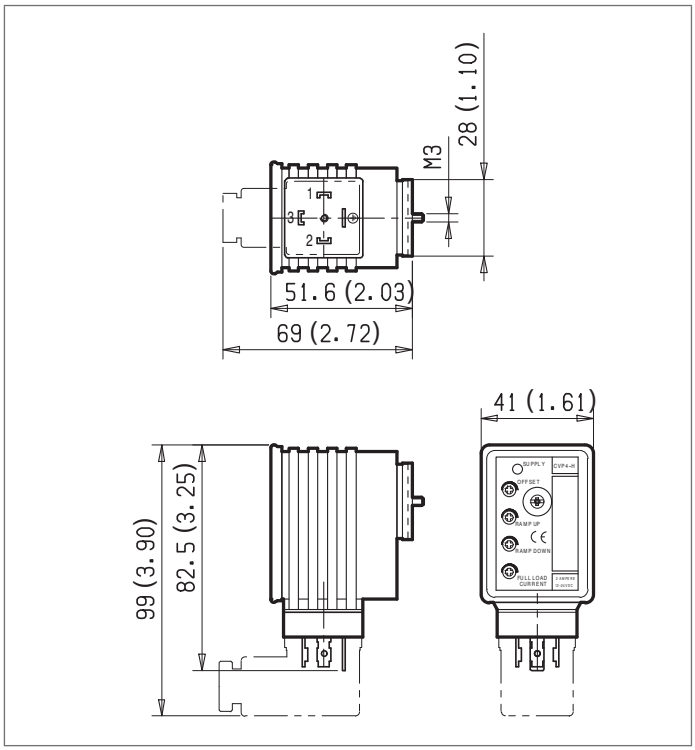
03 Protection class: IP 65 with female connector properly fitted (see drawing).



07 Protection class: IP 69 K with female connector properly fitted.



Electronic feed regulator



Supply: yellow LED, lit up with power ON.
Off Set: minimum current adjustment. Adjust solenoid current so that the desired minimum value is obtained. Clockwise rotation increases current.
Ramp up: Ramping up time adjustment.
Ramp down: Ramping down time adjustment.
For longer ramping times, turn potentiometers clockwise; for shorter ramping times, turn the potentiometers counter-clockwise.
Full load current: Maximum current adjustment. Adjust solenoid current so that the desired maximum value is obtained (up to 2A). Clockwise rotation increases current.
Frequency adjustment: it is possible to set the PWM frequency obtaining the desired control sensitivity. After removing the external plastic cover, turn the adjusting screw; clockwise rotation increases frequency from 100 to 500 Hz.

Port connections G 1/2 - SAE10 - Flangeable

General specifications

Valve elements with solenoid operated directional spool.
Control spools directly operated by solenoids with removable coils.
In the de-energized condition, the control spool is held in the central position by return springs.
Wet pin tubes for DC coils, with push rod for mechanical override; zinc plated surface.
Coils can be rotated 180° around the tube; they can be energized by AC current throught special connection with rectifier (RAC).
Manual override (push-button, screw type) available as option.
Different plug-in connectors available: see ordering details.

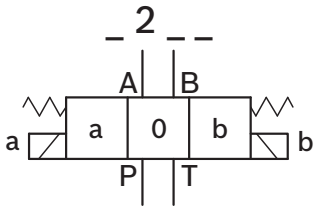
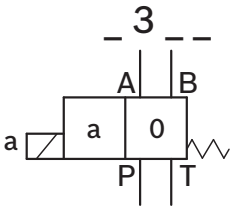
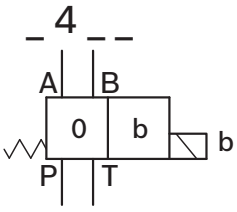
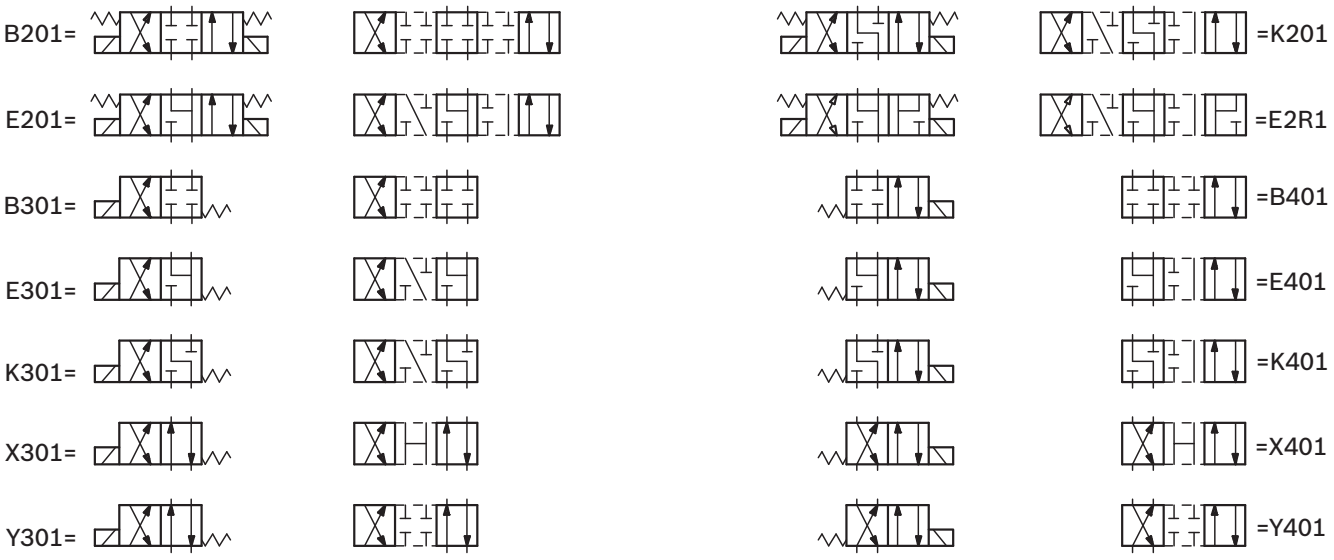
Spool variant

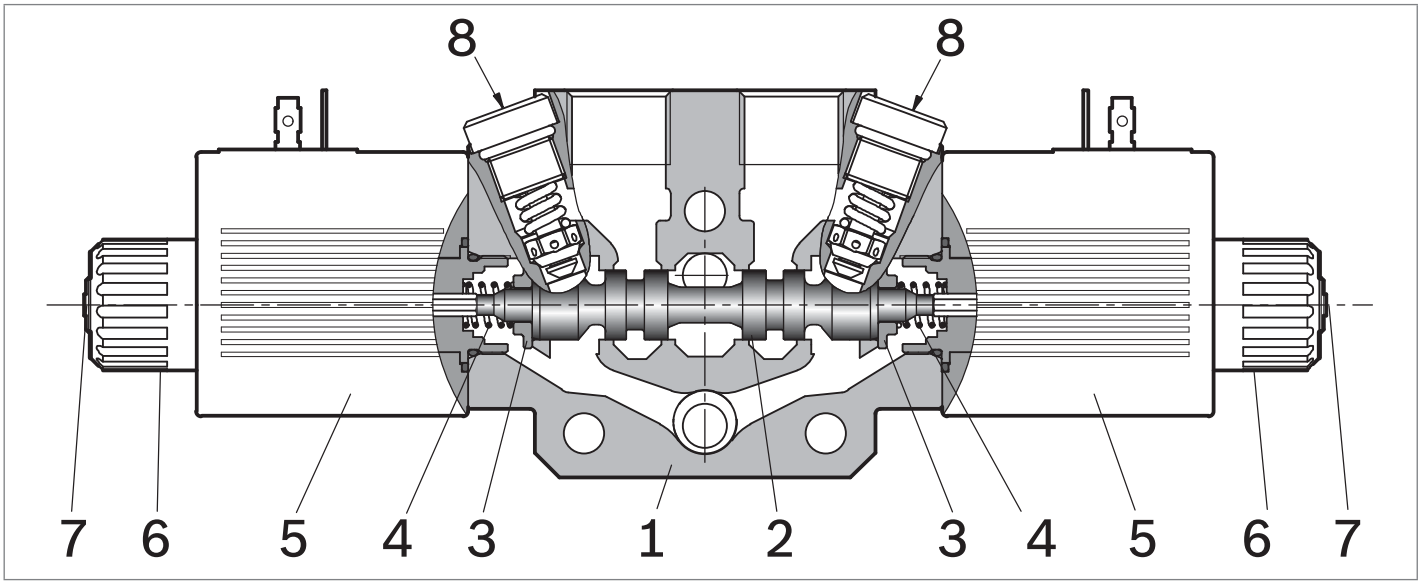








Functional description



The sandwich plate design directional valve elements D8_5 are compact direct operated solenoid valves which control the start, the stop and the direction of the oil flow. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**). The spring chambre are connected to the tank port. When the coil is energized, the spool (**2**) travels and oil is pushed to tank from one of the spring chambers: if the cross section of the orifices changes, the switching time changes as well. Three orifice sizes are available: smaller orifice results in longer switching time, even though the actual time is dependent upon pressure, flow and viscosity.When energized, the force of the solenoid (**5**) pushes the control spool (**2**) from its neutral-central position to the required position, and the required flow from P to A (with B to T), or P to B (with A to T) is achieved. Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer (**3**) back against the housing and the spool returns in its neutral-central position. Each coil is fastened to the solenoid tube by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage. The secondary cartridge valves are designed for quick response and stable pressure control (**8**); they also incorporate a reverse flow check for anti-cavitation.

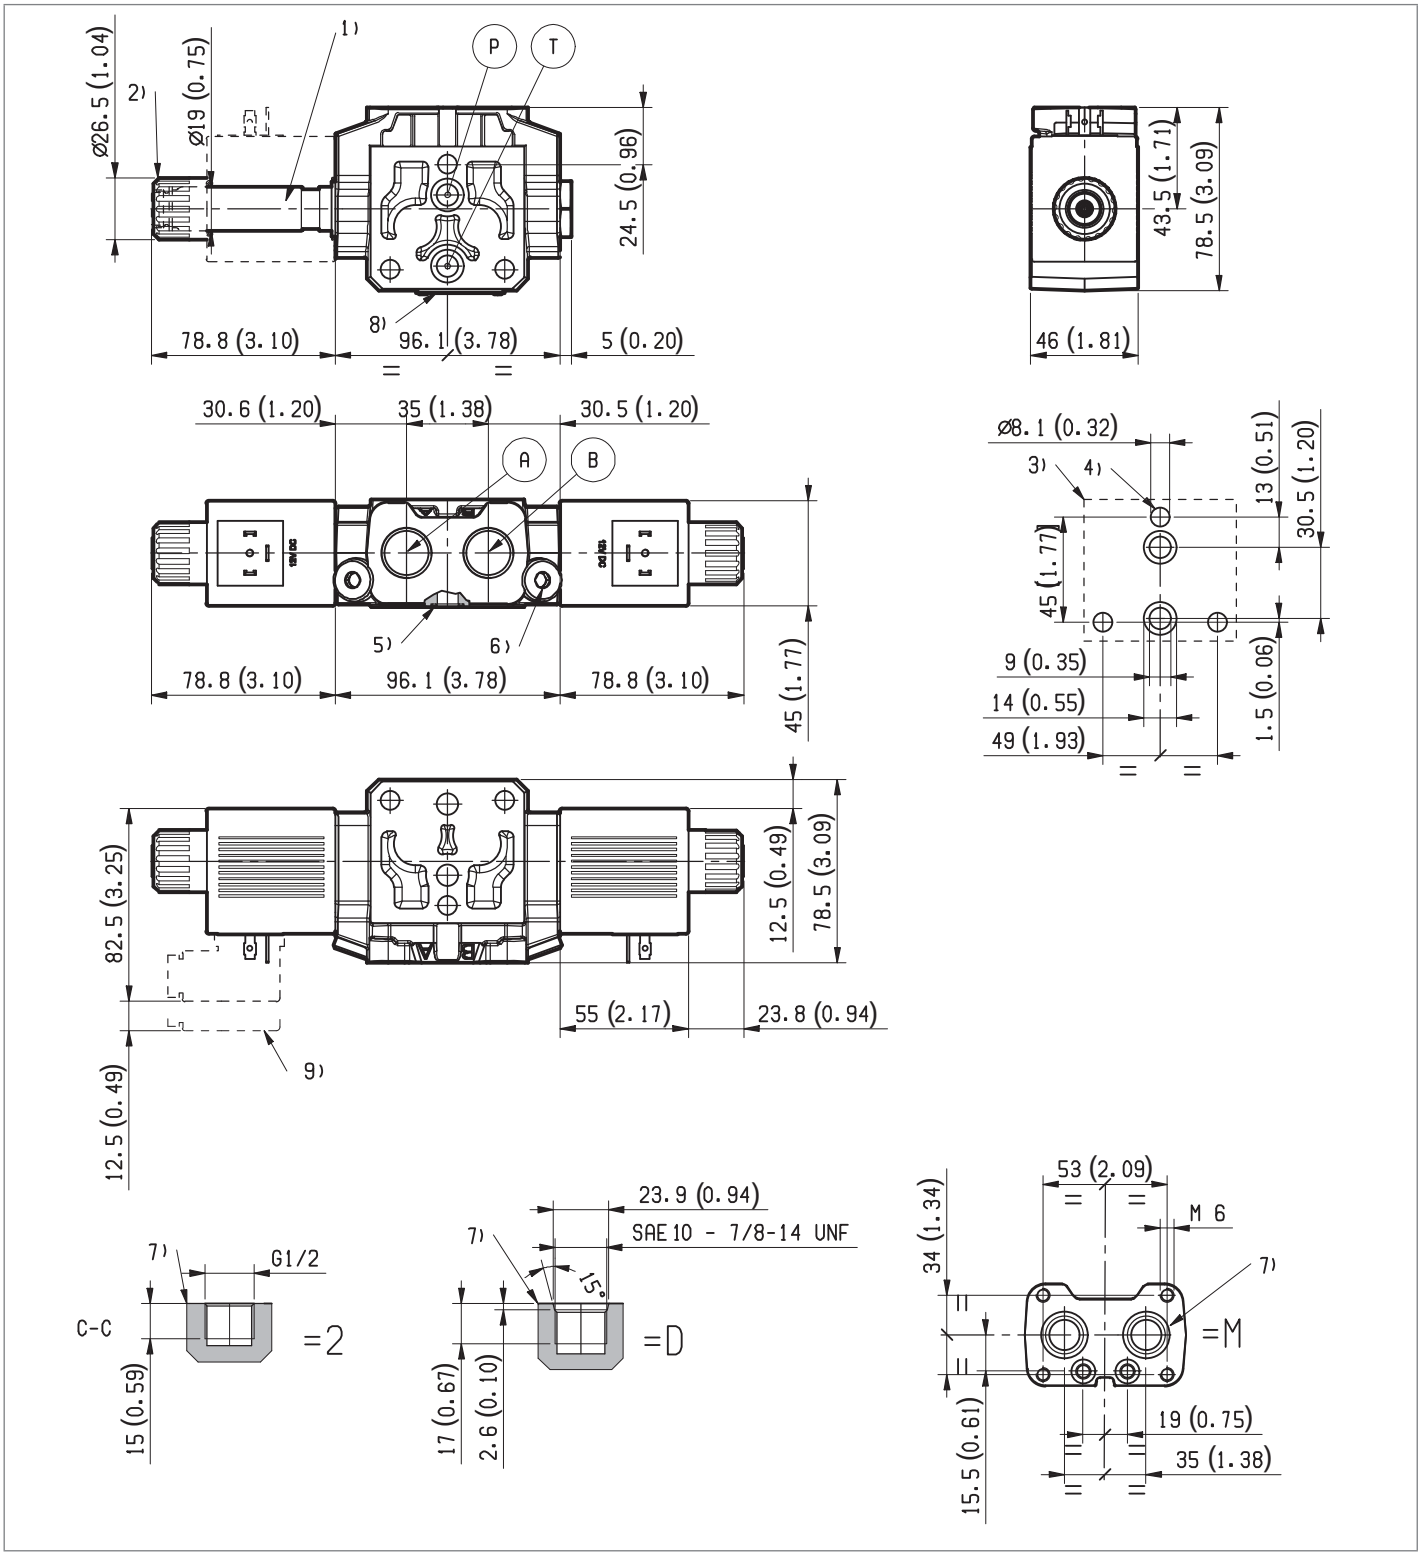
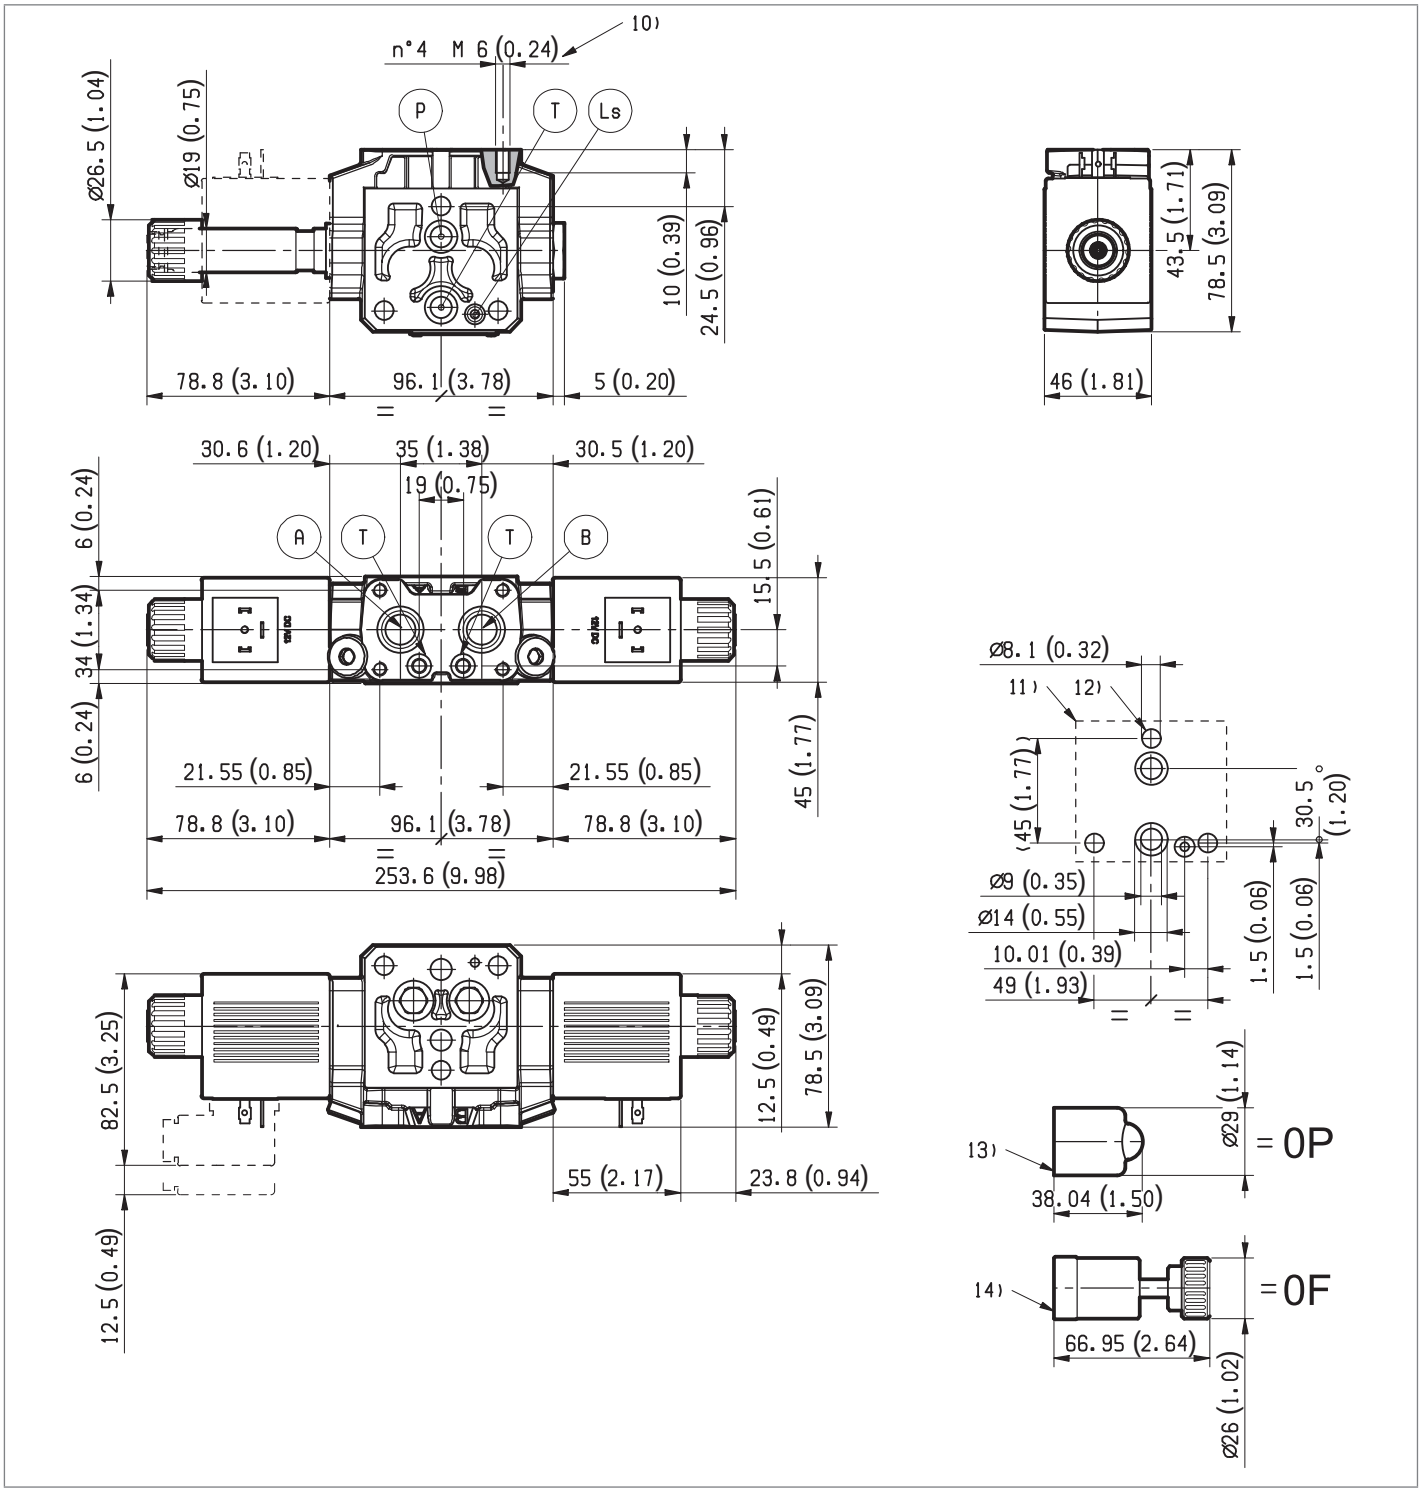
The performance curves are measured with flow going across and coming back, like P>A and B>T, with symmetrical flow areas.
In case of special circuit connections, the performance limits can change.

External dimensions and fittings



1 Solenoid tube Ø 19mm (0.75 inch).
2 Ring nut for coil locking (Ø 26,5mm); torque 5 Nm ± 10% (3.68 ± 10% ft-lb).
3 Flange specification for coupling to ED intermediate elements.
4 For tie rod and tightening torque information see data sheet RE 18301-90.
5 O-Rings for P and T ports.
6 Secondary Pressure relief valve, hex 6mm (0.236 inch), torque 25-30 Nm (19-22 ft-lb).
7 A and B ports.
8 Identification label.
9 Clearance needed for connection removal.



10 Four threaded M6 for fitting secondary flangeable elements. Bolts M6 with minimum recommended strength class DIN8.8. Torque 9-10 Nm (6.6-7.4 ft-lb).

11 Flange specification for coupling to the ED intermediate elements with LS channels.

12 For tie rod and tightening torque information see data sheet RE 18301-90.

13 Optional push-button manual override, 0P type, for spool opening: it is pressure stuck to the ring nut for coil locking. Mat no R933000043.

14 Optional screw manual override, 0F type, for spool opening: it is screwed (torque 6-7 Nm (4.4-5.2 ft-lb)) to the tube as replacement of the coils ring nut. Mat no. R933000022.

Maximum operating pressure 310 bar (4500 psi)
Maximum flow at 14 bar (203 psi) 50 l/min (13.2 gpm)
Maximum flow at 18 bar (261 psi) 58 l/min (15.3 gpm)
Ports connections planned G 3/8 - G 1/2 - SAE8 and Modular

General specifications

Valve element with direct proportional flow sharing control.
It can achieve the simultaneous activation of different actuators by distributing the available flow proportionally to the speeds selected by the operator.
All simultaneous movements go on at the same reciprocal speed also in case of flow shortage.
Each energized actuator receives a pressure compensated flow.
No shuttle valve fitted.
Wet pin proportional tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Manual override (push-button, screw type or lever) available as option.
Different plug-in connectors available: see ordering details.

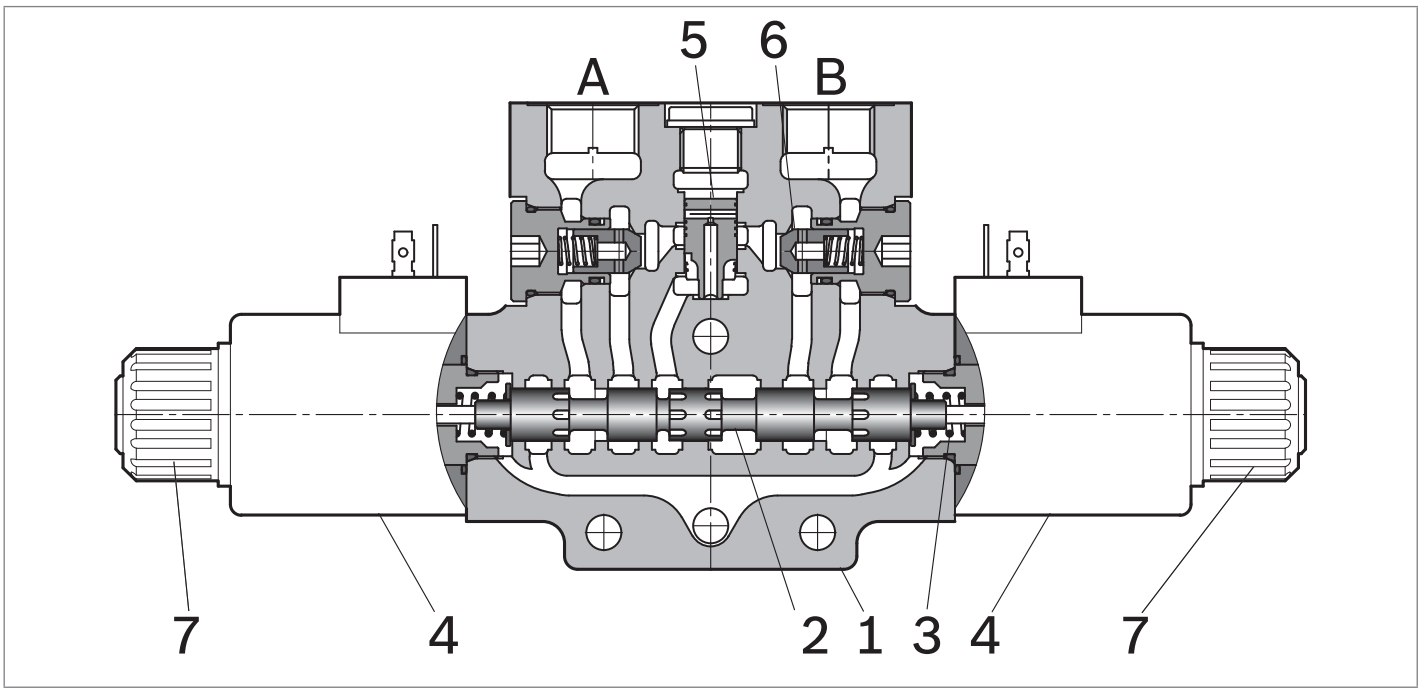
Functional description



The sandwich plate design directional valve elements L8580... are compact direct operated pressure compensated proportional solenoid valves which control the start, the stop, the direction and the quantity of the oil flow, with a FLOW SHARING principle. These elements basically consist of a stackable housing (**1**) with a control spool, two solenoids (**4**), two return springs. Energized by an electronic feed regulator, each solenoid (**4**) displaces the control spool from its neutral-central position “0” proportionally to the current received. When the spool is shifted and the metering notch is open, flow delivery starts and is controlled by a 3 way pressure compensator followed by a check valve for each port A and B. The compensator, balanced by the LS pressure at the opposite end, lifts up and unloads a regulated flow which is sent to the A (or B) port through the relevant check valve; at the same time the opposite port allows oil return to tank.
LS pressure reaches the compensator “dead end” directly from the A or B port, while the check valves lock eventual pressure oscillations which could affect the compensator function.
When the solenoid is de-energized, the return spring pushes the spool thrust washer back against the housing and the spool returns in its neutral-central position.
Each coil (**4**) is fastened to the solenoid tube by the ring nut (**7**). A pin allows to push the spool under emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General			
Valve element with 2 solenoids		kg (lbs)	3.95 (8.71)
Valve element with 1 solenoid		kg (lbs)	3.60 (7.91)
Ambient Temperature		°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic			
Maximum pressure at P, A and B ports		bar (psi)	310 (4500)
Maximum pressure at T		bar (psi)	210 (3050)
Maximum pressure with lever emergency at T		bar (psi)	140 (2030)
Max. regulated flow at 14 bar (203 psi)		l/min (gpm)	50 (13.2)
Max. regulated flow at 18 bar (261 psi)		l/min (gpm)	58 (15.3)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:			Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.
Fluid Temperature		°C (°F)	–20....+80 (-4....+176) (NBR seals)
Permissible degree of fluid contamination			ISO 4572: $\beta_x \geq 75$ X=10...12 ISO 4406: class 19/17/14 NAS 1638: class 8
Viscosity range		mm^2/s	20....380 (optimal 30....46)
Electrical			
Voltage type		PWM	120 Hz
Voltage tolerance (nominal voltage)		%	-10 .... +10
Duty			Continuous, with ambient temperature ≤ 50°C (122°F)
Coil wire temperature not to be exceeded		°C (°F)	150 (302)
Insulation class			H
Compliance with			Low Voltage Directive LVD 73/23/EC (2006/95/EC), 2004/108/EC
Coil weight		kg (lbs)	0.335 (0.739)
Voltage		V	12 24

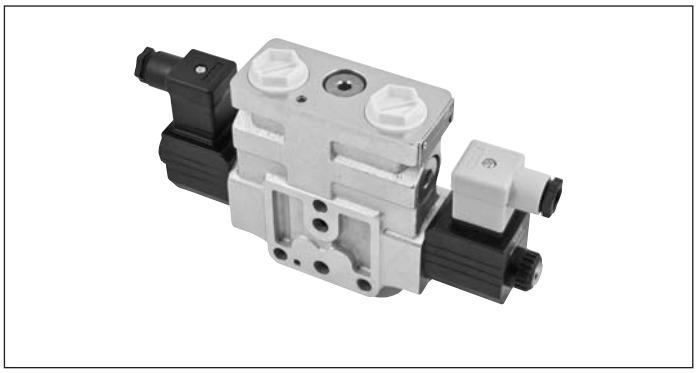
4/3 and 4/2 on-off directional valve elements with flow sharing control (LUDV concept)
PATENT PENDING

L8510... (EDC-Z)

RE 18301-10
Edition: 02.2016
Replaces: 07.2012



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow at 14 bar (203 psi) 23.5 l/min (6.2 gpm)
Maximum flow at 18 bar (261 psi) 26.5 l/min (7 gpm)
Ports connections G 3/8 - SAE8 and Modular

General specifications

Valve element with direct on-off flow sharing control.
It can achieve multiple simultaneous manoeuvres by distributing the available flow to each actuator selected by the operator, independently from the working pressure required.
All simultaneous movements go on at the same reduced speed in case of flow shortage.
Each energized actuator receives a pressure compensated flow.
No shuttle valve fitted.
Control spools directly operated by screwed-in solenoids with removable coils.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Manual override (push-button, screw type or lever) available as option.
Different plug-in connectors available: see ordering details.

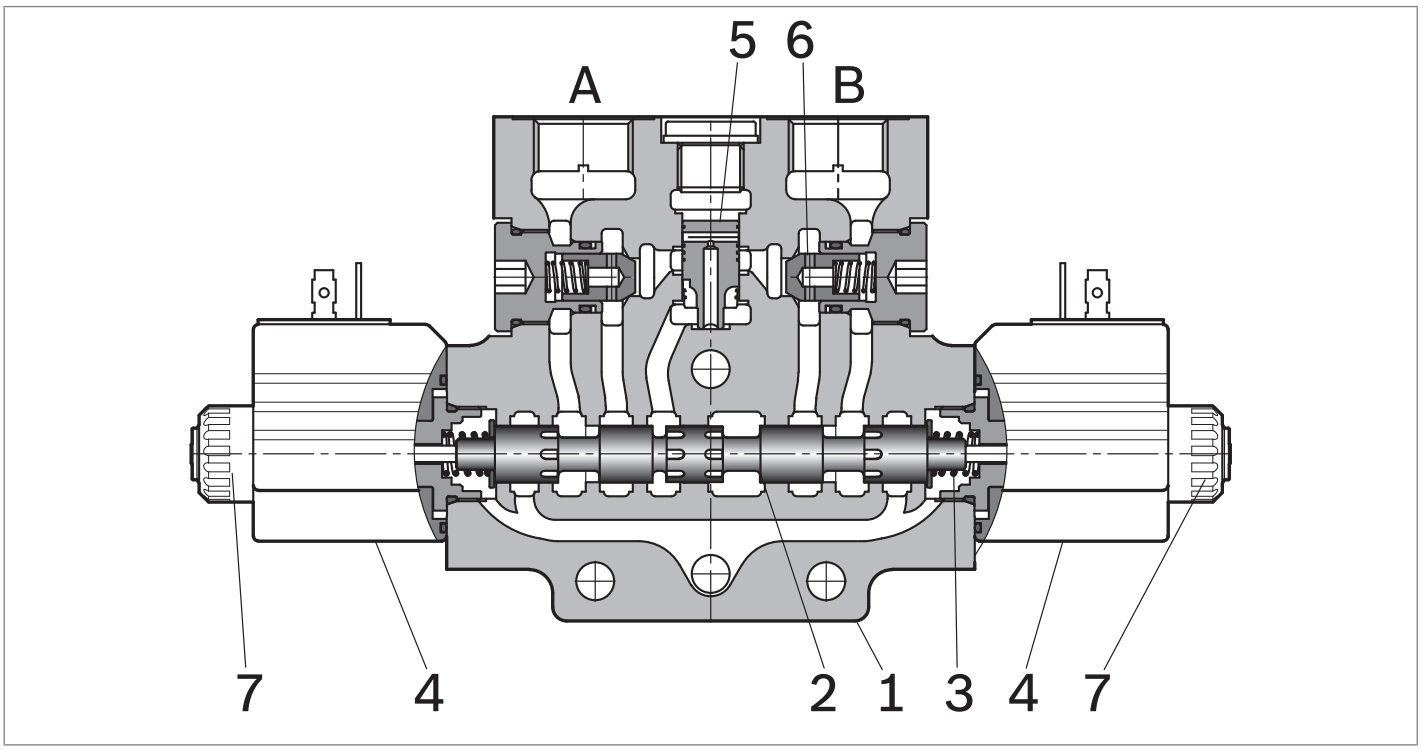
Functional description



The sandwich plate design directional valve elements L8510... are compact direct operated pressure compensated solenoid valves which control the start, the stop, the direction and the quantity of the oil flow, with a FLOW SHARING principle. These elements basically consist of a stackable housing (**1**) with a control spool, two solenoids (**4**), two return springs. When energized, each solenoid (**4**) displaces the control spool from its neutral-central position “0” and the metering notches are open; flow is delivered to the 3 way pressure compensator followed by a check valve for each port A and B. The compensator, balanced by the LS pressure at the opposite end, lifts up and unloads a pressure compensated flow which is sent to the A (or B) port through the relevant check valve; at the same time the opposite port allows oil return to tank.

LS pressure reaches the compensator “dead end” directly from the A or B port, while the check valves lock eventual pressure oscillations which could affect the compensator function.

When the solenoid is de-energized, the return spring pushes the spool thrust washer back against the housing and the spool returns in its neutral-central position.

Each coil (**4**) is fastened to the solenoid tube by a ring nut (**7**). A pin allows to push the spool under emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

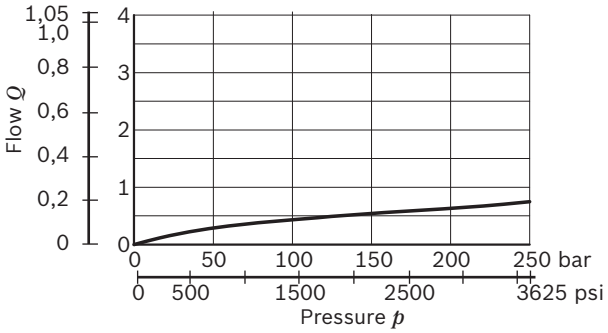
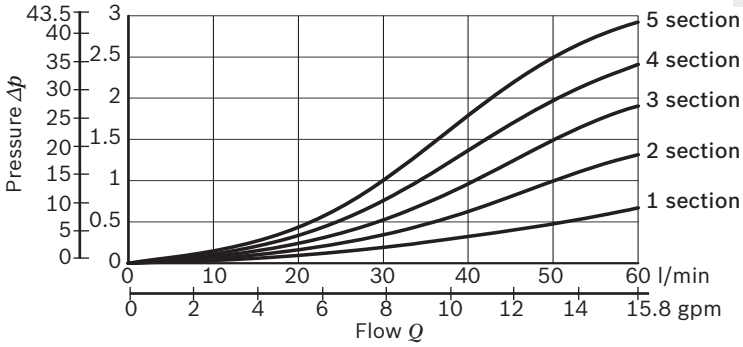
The performance curves are measured with flow going across and coming back, like P>A and B>T. With “lever type” emergency control, the performance limits are slightly lower.

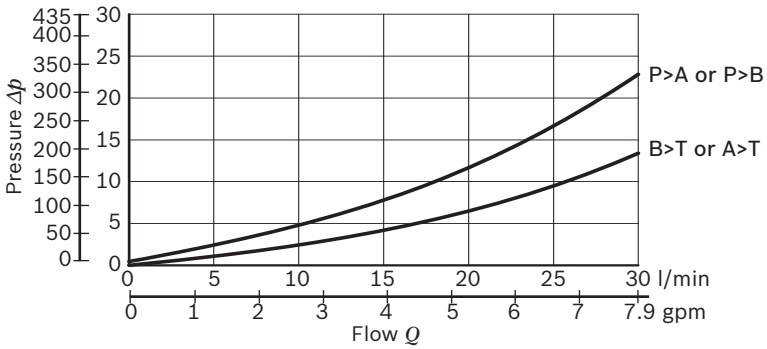
LS drain



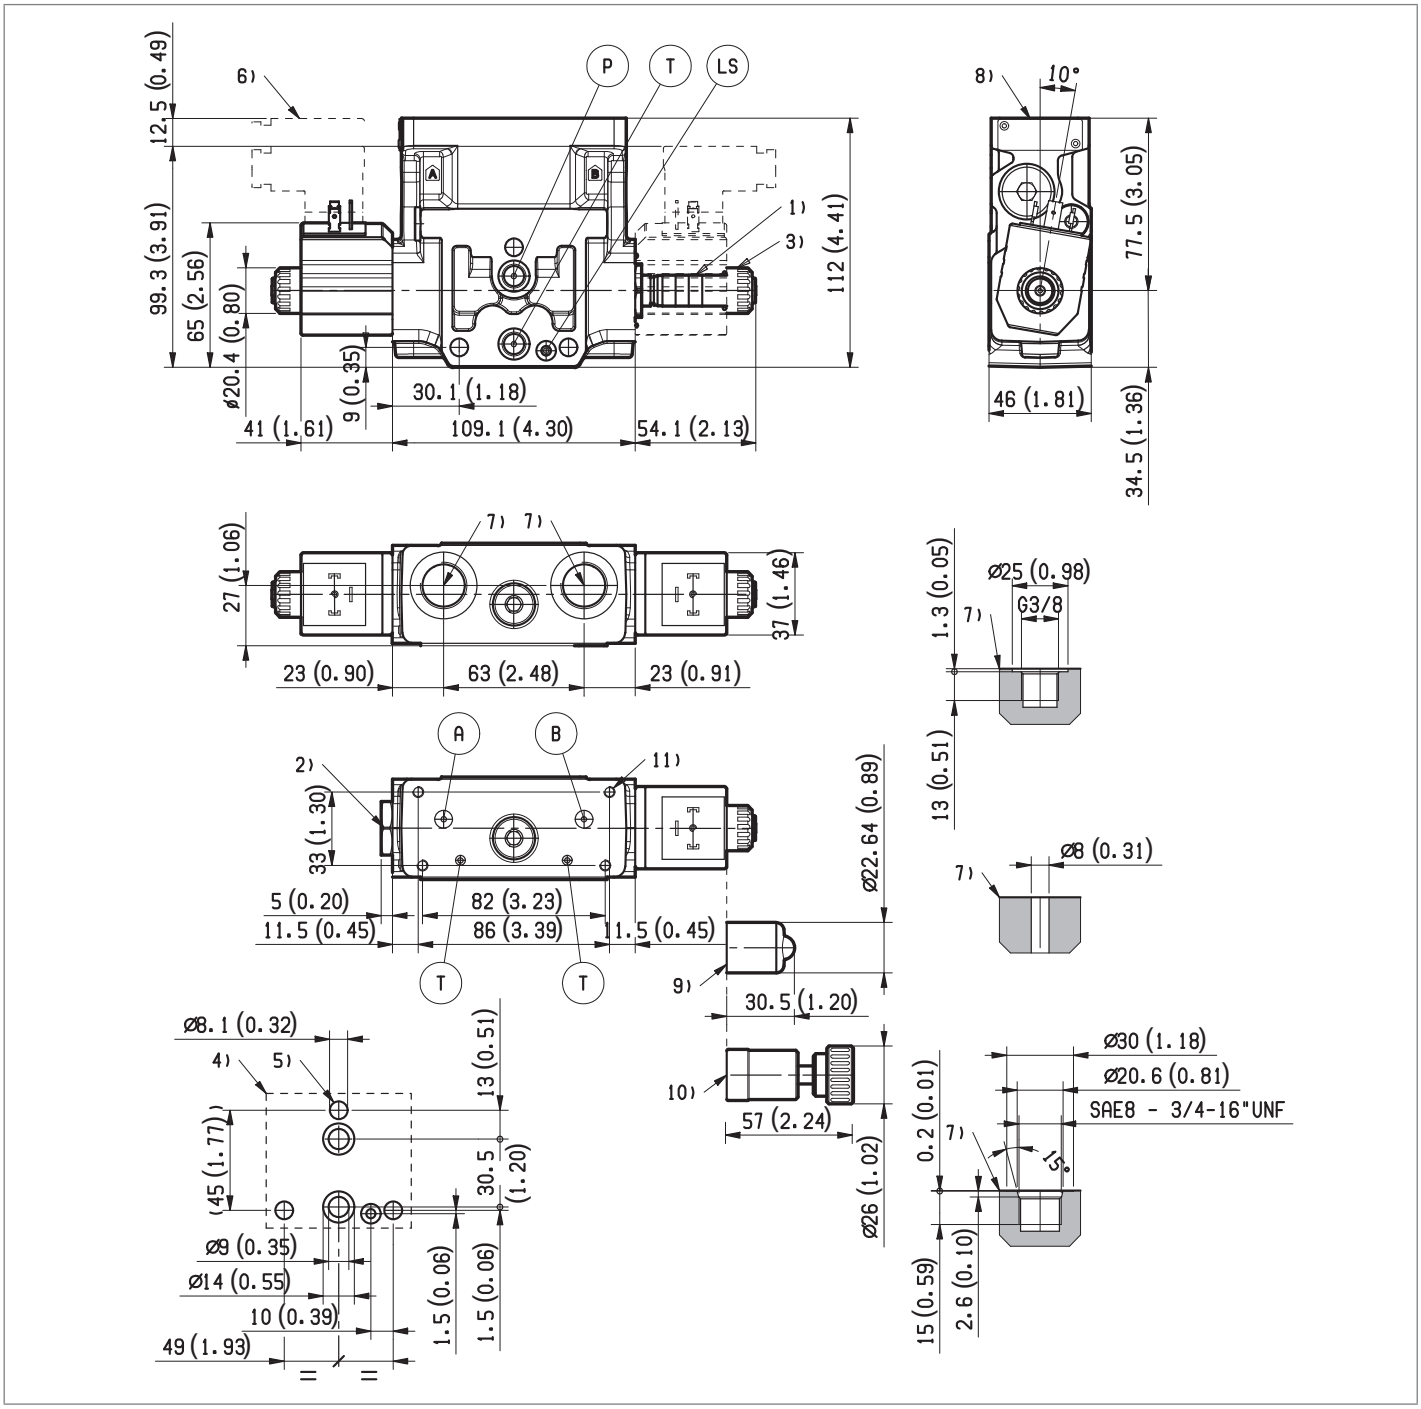
Version: pressure drop Δp = Δp(Q) (P_{IN}- P_{OUT}) to the next section



Pressure drop Δp = Δp(Q) with spool B2S4



External dimensions and fittings



1 Solenoid tube Ø 14 mm (0.55 inch).
2 Plug for 2 positions versions (4/2).
3 Ring nut for coil locking (Ø 20.4 mm). Torque 5-6Nm (3.6-4 4 ft-lb).
4 Flange specifications for coupling to ED intermediate elements.
5 For tie rod and tightening torque information see data sheet RE 18301-90.
6 Clearance needed for connector removal.
7 A and B ports.
8 Identification label.
9 Optional push-button manual override, 0P type, for spool opening: it is pressure stuck to the ring nut for coil locking.Mat no. R933000042.
10 Optional screw type manual override, 0F type, for spool opening: it is screwed (torque 6-7 Nm (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat no. R933000021.
11 Four threaded holes M5 deepth 12mm (0.47 inch) for fitting a secondary flangeable element. Bolts M5 with recommended strength class DIN8.8: torque 5-6 Nm (3.6-4.4 ft-lb) (only for version with modular secondary valves).

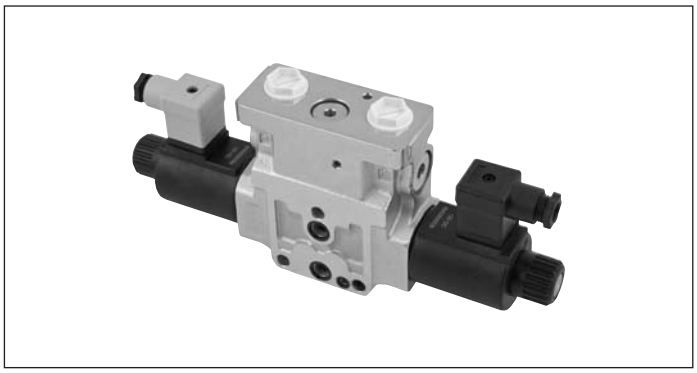
4/3 and 4/2 on-off directional valve elements with flow sharing control (LUDV concept)

L8511... (EDC-DZ)

RE 18301-11
Edition: 02.2016
Replaces: 07.2012



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow at 14 bar (206psi) 48 l/min (12.7 gpm)
Maximum flow at 18 bar (261psi) 54 l/min (15.3 gpm)
Ports connections G 1/2 - SAE8 and Modular

General specifications

Valve element with direct on-off flow sharing control.
It can achieve multiple simultaneous manoeuvres by distributing the available flow to each actuator selected by the operator, independently from the working pressure required.
All simultaneous movements go on at the same reduced speed in case of flow shortage.
Each energized actuator receives a pressure compensated flow.
No shuttle valve fitted.
Control spools directly operated by screwed-in solenoids with extractable coils.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Manual override (push-button, screw type or lever) available upon request.
Different plug-in connectors available: see ordering details.

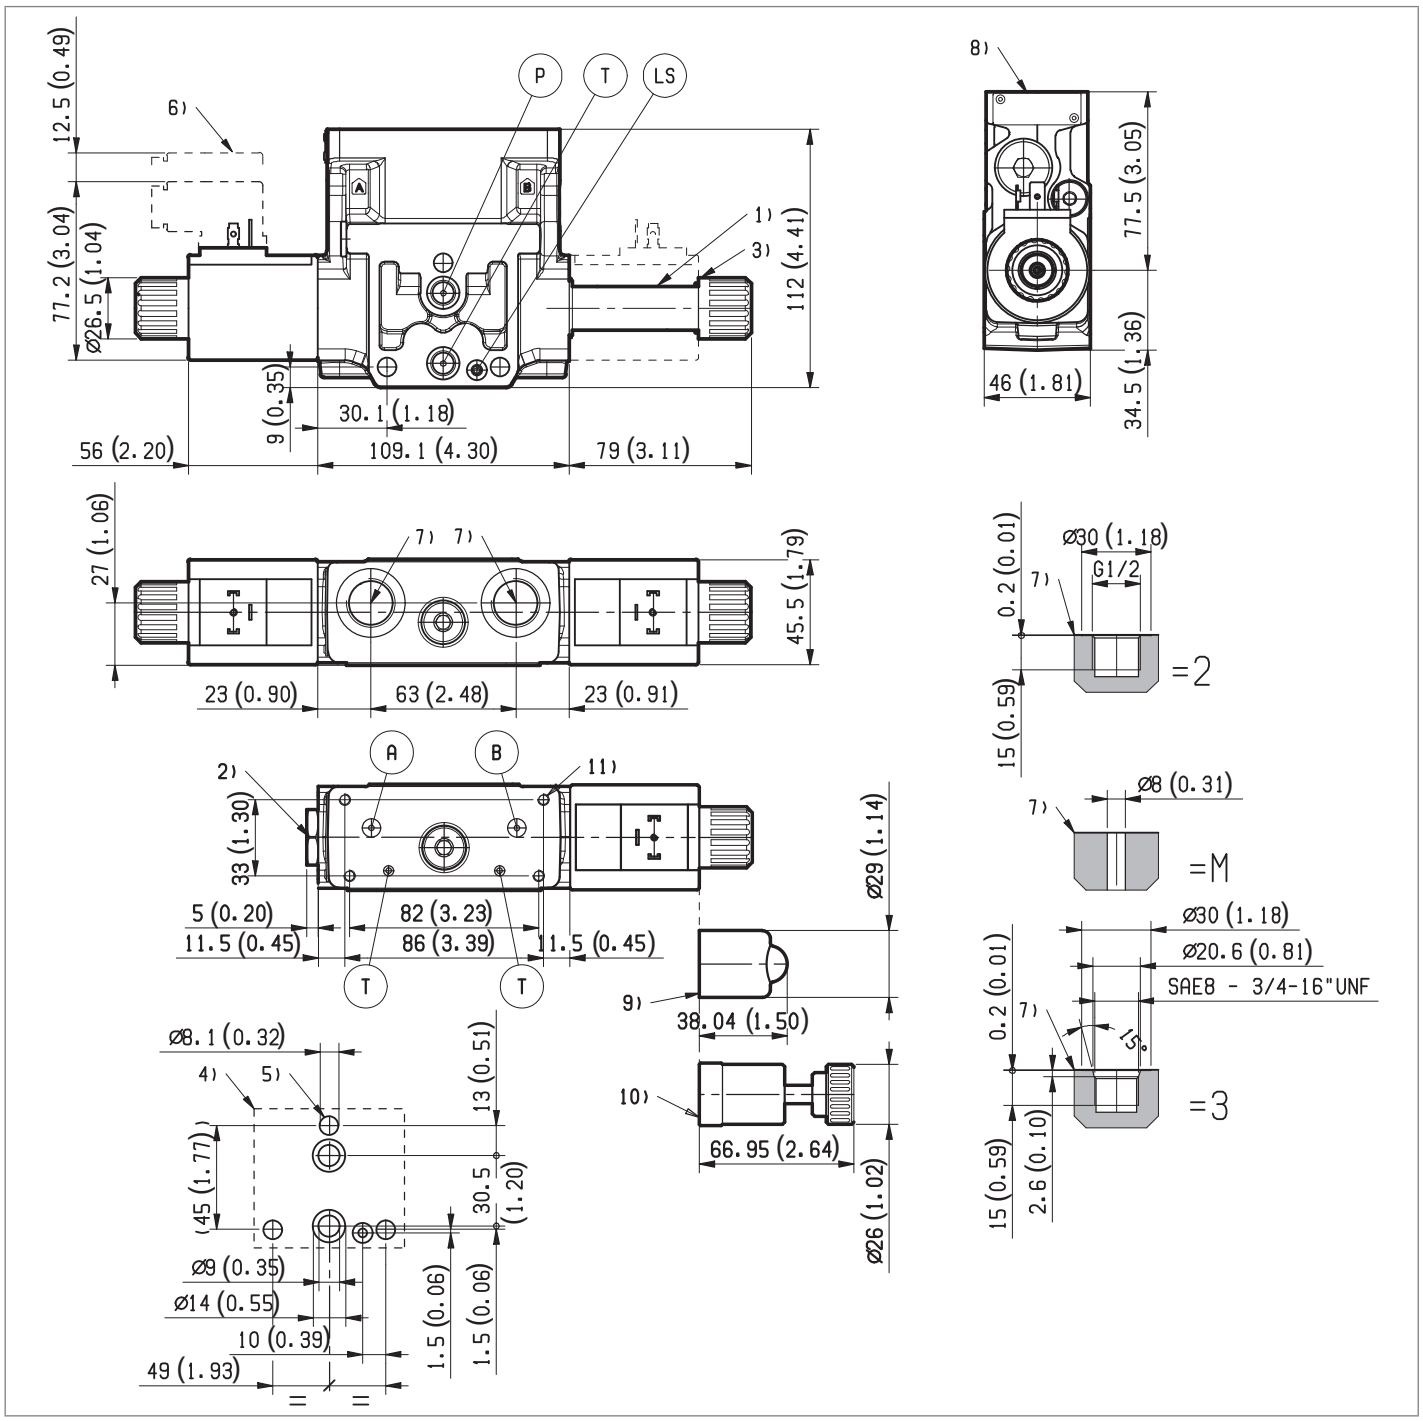
External dimensions and fittings



1 Solenoid tube Ø19mm (0.75 inch).
2 Plug for 2position version (4/2).
3 Ring nut for coil locking (Ø26.5mm).
Torque 6-7 Nm (4.4-5.2 ft-lb).
4 Flange specifications for coupling to ED intermediate elements.
5 For tie road and tightening torque information see data sheet RE 18301-90.
6 Clearance needed for connector removal.
7 A and B ports.
8 Identification label.
9 Optional push-button manual override, 0P type, for spool opening: it is pressure stuck to the ring nut for coil locking.
Mat no. R933000043.
10 Optional screw type manual override, 0F type, for spool opening: it is screwed (torque 6-7 Nm (4.4-5.2ft-lb) to the tube as replacement of the coil ring nut. Mat no. R933007215.
11 Four threaded holes M5 deepth 12mm (0.47 inch) for fitting a secondary flangeable element. Bolts M5 with recommended strength class DIN8.8: torque 5-6 Nm (3.6-4.4 ft-lb) (only for version with modular secondary valves).

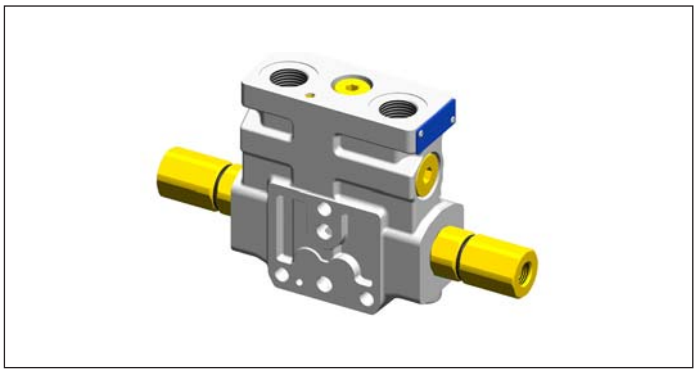
4/3 Proportional directional valve elements with proportional hydraulic control and flow sharing control (LUDV concept)

PATENT PENDING

L85P5... (EDC-IP)

RE 18301-14
Edition: 04.2016



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow at 14 bar (203 psi) 50 l/min (13.2 gpm)
Maximum flow at 18 bar (261 psi) 58 l/min (15.3 gpm)
Ports connections planned G 3/8 - G 1/2 - SAE8 and Modular

General specifications

Valve element with direct proportional flow sharing control.
It can achieve the simultaneous activation of different actuators by distributing the available flow proportionally to the speeds selected by the operator.
All simultaneous movements go on at the same reciprocal speed also in case of flow shortage.
Hydraulically direct operated spool.
Hydraulic operating element bolted on.
Hydraulic operating element available with inlet port: G1/4 DIN3852; 9/16-18 UNF 2-B.
The control spool is held in the central position by return springs.

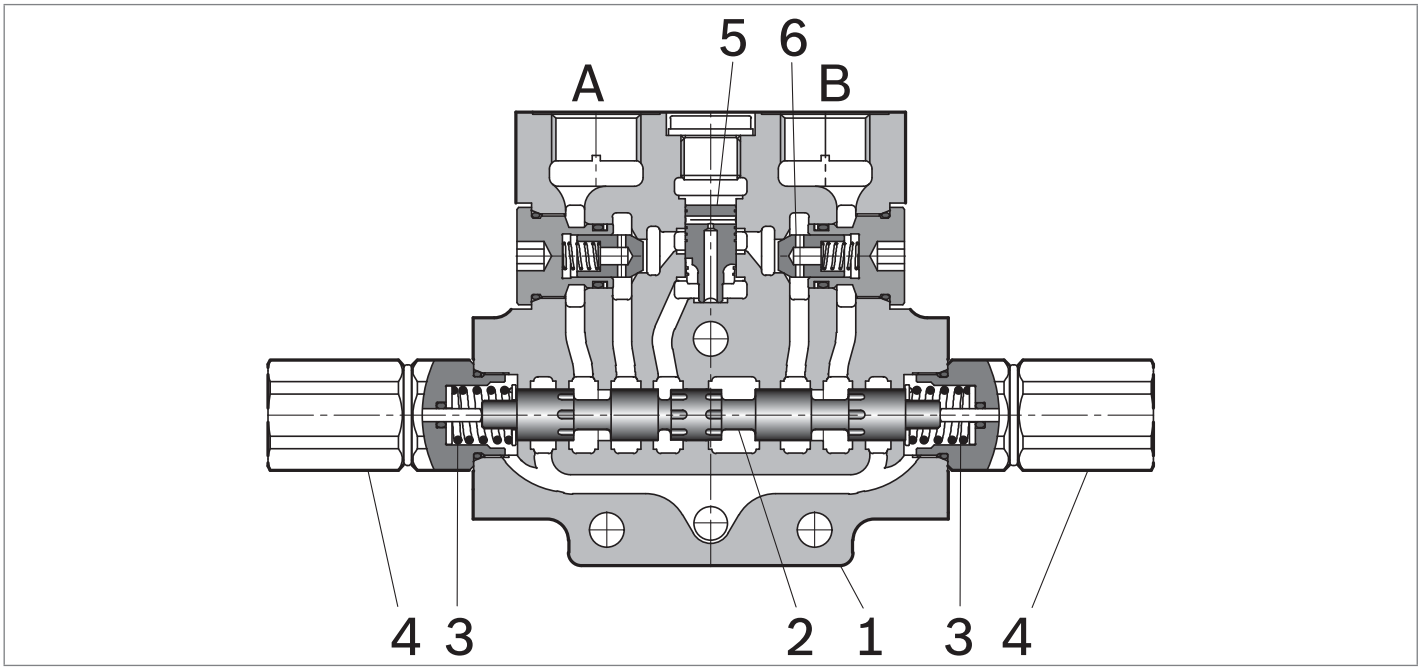
Functional description



The sandwich plate design directional valve elements L85P5... are compact direct hydraulic operated pressure compensated proportional valves which control the start, the stop, the direction and the quantity of the oil flow, with FLOW SHARING principle. These elements basically consist of a stackable housing (**1**) with a control spool (**2**), two hydraulic operating blocks (**4**), and two return spring return (**3**).
The hydraulic pressure in one of the blocks (**4**) pushes the control spool (**2**) from its neutral-central position "0" to the required end position "a" or "b". When the spool is shifted and the metering notch is open, flow delivery starts and is controlled by a 3 way pressure compensator followed by a check valve for each port A and B.

The compensator, balanced by the LS pressure at the opposite end, lifts up and unloads a regulated flow which is sent to the A (or B) port through the relevant check valve; at the same time the opposite port allows oil return to tank. LS pressure reaches the compensator “dead end” directly from the A or B port, while the check valves lock eventual pressure oscillations which could affect the compensator function.
When the pressure decrease in one of the block (**4**), the return spring (**3**) pushes the spool thrust washer back against the housing and the spool returns in its neutral-central position.

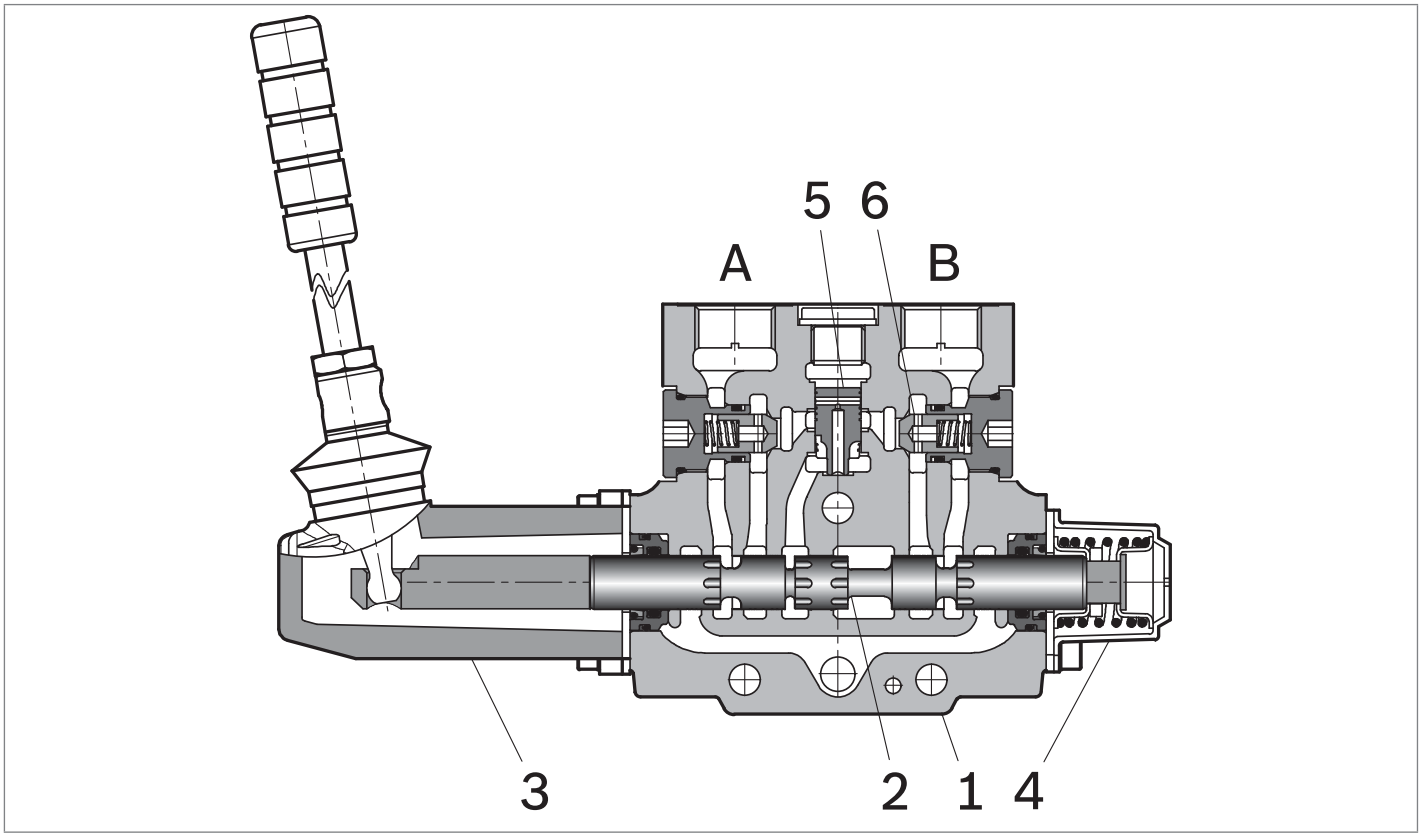
Functional description



The sandwich plate design directional valve elements L85L1... are compact direct operated pressure compensated manual operated valves which control the start, the stop, the direction and the quantity of the flow, with a FLOW SHARING principle.
These elements basically consist of a stackable housing (**1**) with the control spool (**2**), a block with the control lever (**3**), and a spring housing (**4**) with a return spring.
When the hand operated lever moves the control spool (**2**) from its neutral-central position "0" and the metering notches are open; flow is delivered to the 3 way pressure compensator (**5**) followed by a check valve (**6**) for each port A or B.

The compensator, balanced by the LS pressure at the opposite and, lifts up and unloads a pressure compensated flow which is sent to the A (or B) port through the relevant check valve; at the same time the opposite port allows oil return to tank.
LS pressure reaches the compensator "dead end" directly from the A or B port, while the check valves lock eventual pressure oscillations which could affect the compensator function.
Type L85L1_2___M1_000 is the valve version in which the spring return brings the spool back to neutral-central position "0"when the manual lever is not operated.

TI-00-__-

RE 18301-25
Edition: 02.2016
Replaces: 07.2012

Description

The intermediate elements TI-00-__- are designed to be fitted between two directional valve elements. They are available with check valve in (P) line, or in (T) line , or in both (P) and (T) line.

With the check valve on (P) line, they are normally fitted to allow free flow from (P) to (P1) and prevent reverse flow from (P1) to (P).

With the check valve on (T) line, they are normally fitted to allow free flow from (T1) to (T), and to prevent reverse flow (T) to (T1).

Bosch Rexroth AG, RE 18301-25/02.2016

Intermediate elements with pressure reducer, and relieving

TI-03-__-

RE 18301-26
Edition: 02.2016
Replaces: 07.2012

Description

The intermediate elements TI-03-__- are designed to be fitted between two directional valve elements. They have a pressure reducing and relieving cartridge which supplies a flow with constant reduced pressure to the downstream operators.

The same cartridge relieves to Tank directly any excessive pressure surge in the downstream line.

These elements basically consist of a stackable aluminium housing, with a VRPX-10A type pressure reducing cartridge.

Technical data

General		
Weight Intermediate element without cartridge TI-03-00-00-AL	kg (lbs)	0.42 (0.93)
Weight Intermediate element with cartridge TI-03-00-_ _-AL	kg (lbs)	0.62 (1.37)
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)

Bosch Rexroth AG, RE 18301-27/02.2016

Intermediate Elements with 2 way compensator, and with LS connections

TI-C2-__-__

RE 18301-28
Edition: 02.2016
Replaces: 07.2012

Description

The sandwich plate design directional valve elements TI-C2-__-... basically consist of a stackable housing with a 2 way compensator controlled by the LS pressure signal. The normally open compensator maintains a constant pressure difference between the P1 (outlet) line and the LS pressure; the result is a constant oil flow to the P1 port for the downstream operators, independently from the working pressure.

The excess oil must be unloaded to tank through a relief valve.

The stackable housing is made of Yellow Zinc plated (Cr+3) Cast Iron.

Technical data

General		
Valve element TI-C2-__-	kg (lbs)	1.7 (3.75)

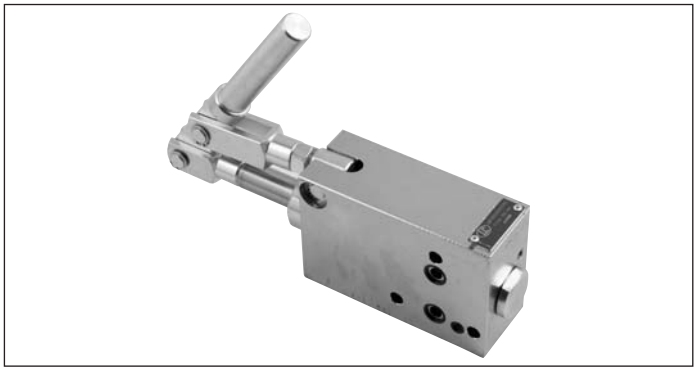
Intermediate Elements
Intermediate elements with double acting hand pump

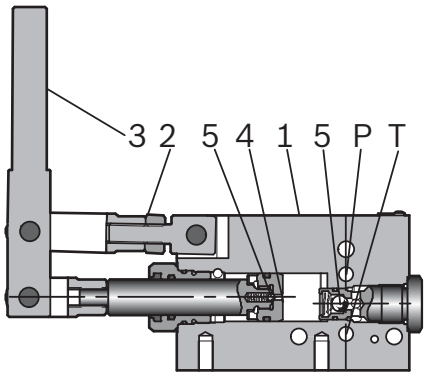
EPM-DE-18

RE 18301-30
Edition: 02.2016
Replaces: 07.2012



Description

It is reccomended to install this intermediate plate with auxiliary hand pump between the inlet plate and the ED modular directional valves.
It is also reccomended that the intermediate plate with auxiliary hand pump is under head.
When used with LS directional valve, please provide a mean to close the LS signal going to the pump.
When used with open center compensator (e.g. TE-06) select a compensator that can be locked in closed position.



Technical data

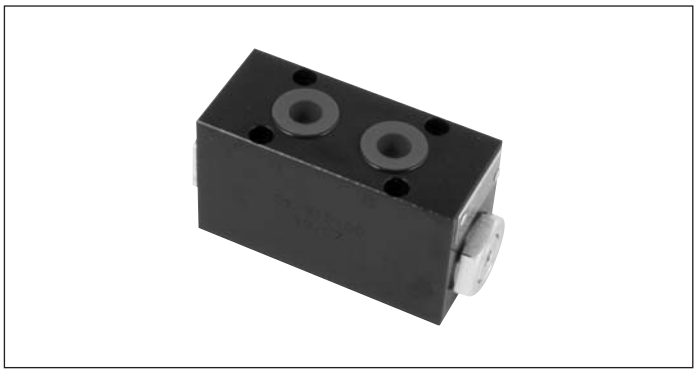
Flangeable elements with single or double acting Cross Piloted Check Valves

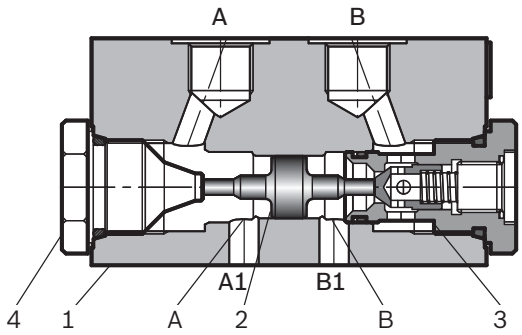
EDM-VR

RE 18301-40
Edition: 02.2016
Replaces: 07.2012



Description

The secondary flangeable elements EDM-VR-__ can be interfaced and bolted on top of the A and B ports of the ED elements of the Directional Valve Assembly.
They incorporate two Cross Piloted Check Valves which allow free flow toward the A and B outlet ports, and lock in a leak free mode the flow returning from the actuator, until sufficient pilot pressure is built up in the opposite line and the check valve is opened.
Depending on the version selected (AB, or 0A, or 0B), the PO Check Valve is in both A and B ports, or in A port only, or in B port only (see hydraulic symbols).
The Pilot Ratio is 4:1, consequently, the pilot pressure needs to be at least 1/4, or 25% of the load induced pressure in the actuator before the Check Valve opens, and oil can return to tank.
The body of the EDM-VR- elements is made of Black Anodized Aluminium (AL). Hydraulic Ports A2 and B2 are size G 3/8.



Technical data

General		
Weight EDM-VR AB and A/B	kg (lbs)	0.8 (1.76)

Description

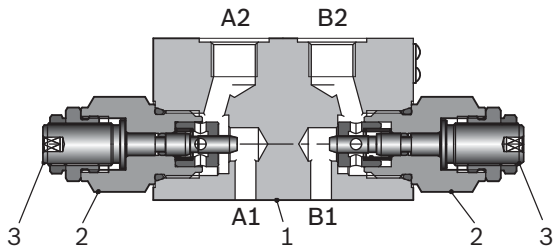
The secondary flangeable elements EDM-VF-__ can be interfaced and bolted on top of the A and B ports of the ED elements of the Directional Valve Assembly.
They incorporate two unidirectional flow restrictors, and, depending on the version selected (01 AB, or 02 AB), they allow free flow A1>A2 and B1>B2, with and controlled/ restricted flow in the reverse directions A2>A1 and B2>B1, or vice-versa.
Also the single acting versions are available, with only one flow restrictor fitted either in side A or in side B.
The restrictors are adjustable through the adjuster screw 3.
The body of the EDM-VF- elements is made of Black Anodized Aluminium (AL). Hydraulic Ports A2 and B2 are size G 3/8.



Technical data

General

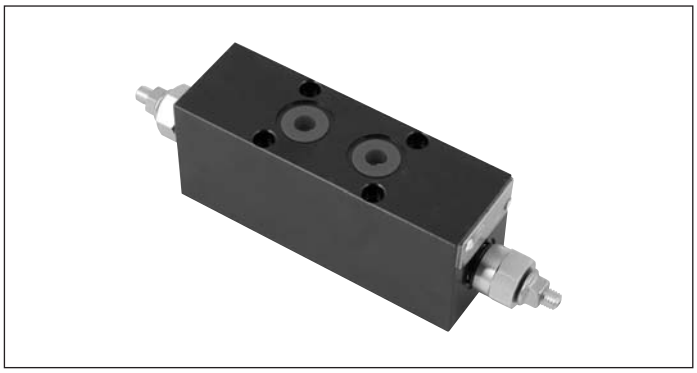
Flangeable elements with Cross Piloted Counterbalance Valves

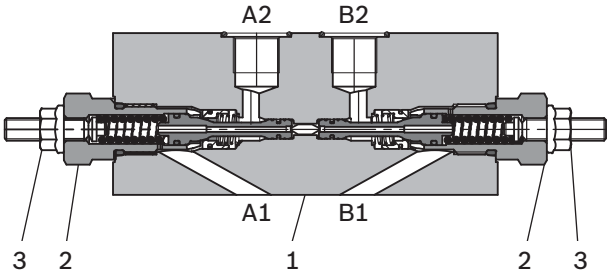
EDM-VB

RE 18301-43
Edition: 02.2016
Replaces: 07.2012



Description

The secondary flangeable elements EDM-VB-__ can be interfaced and bolted on top of the A and B ports of the ED elements of the Directional Valve Assembly.
They incorporate one or two Cross Piloted Counterbalance Valves which allow free flow toward the A and B outlet ports, and lock in a leak free mode the flow returning from the actuator. Pilot pressure in the opposite line reduces the pressure setting of the counterbalance valve in proportion to the pilot ratio (4:1) until opening and allowing the flow return from the actuator.
The pressure setting should be at least 1,3 times the highest expected load.
Depending on the version selected (02AB, 020A or 020B), the counterbalance function can be double-acting or single-acting, upstream or downstream, in both A and B ports, or in A port only, or in B port only (see hydraulic symbols).
The body of the EDM-VB elements is made of Black Anodized Aluminium. Hydraulic Ports A and B are size G 3/8.



Technical data

General		
Weight of manifold, with two counterbalance valves EDM-VB-AB	kg (lbs)	1.2 (2.65)
Weight of manifold, with one counterbalance valve EDM-VB-0A	kg (lbs)	1.02 (2.24)

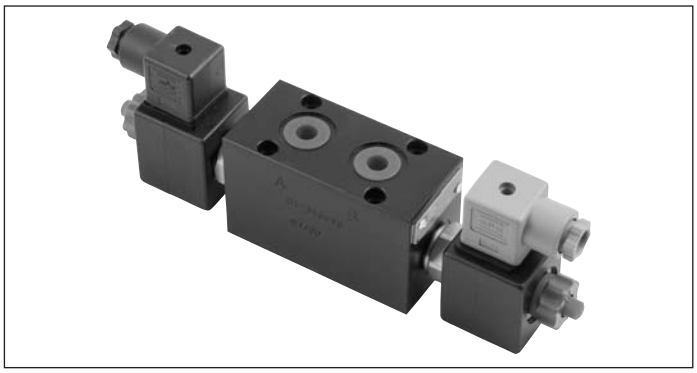
Flangeable elements with 2/2 solenoid cartridges valves

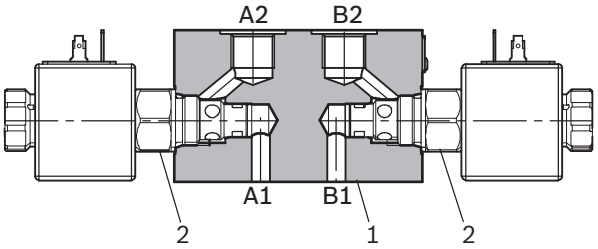
EDM-VEI

RE 18301-44
Edition: 02.2016
Replaces: 07.2012



Description

The secondary flangeable elements EDM-VEI-__ can be interfaced and bolted on top of the A and B ports of the ED elements of the Directional Valve Assembly.
They incorporate one or two solenoid operated cartridges (VEI), and they can create a variety of hydraulic circuits, depending on the cartridges fitted.
The body of the EDM-VEI elements is made of Black Anodized Aluminium. Hydraulic Ports A2 and B2 are size G 3/8.



Technical data

Bosch Rexroth AG, RE 18301-44/02.2016

Flangeable elements with single or double secondary pressure relief valves and anti-cavitation function

EDCM/EDCMF-VM

RE 18301-45
Edition: 02.2016
Replaces: 07.2012

Description

These modular secondary elements can be flange mounted on top of the EDC elements machined with the interfacing surface.

They let through free flow to the A (or B) port until pressure increases and reaches the selected pressure setting; then they release flow into the Tank channels.

The direct acting relief cartridges are designed for quick response and stable pressure control; they also incorporate a reverse flow check for anti-cavitation.

With a body made of zinc plated cast iron, these elements combine secondary pressure relief and dual cross-over, with anti-cavitation function.

Pressure relief valves and anti-cavitation function

Bosch Rexroth AG, RE 18301-45/02.2016

Flangeable elements with single or double acting Cross Piloted Check Valves

EDCM/EDCMF-VR

RE 18301-46
Edition: 02.2016
Replaces: 07.2012

Description

These secondary flangeable elements can be interfaced and bolted on top of the A and B ports of the ED elements of the directional valve assembly.

They incorporate two cross piloted check valve which allow free flow toward the A and B outlet ports, and lock in a leak free mode the flow returning from the actuator, until sufficient pilot pressure is built up in the opposite line and the check valve in opened.

Depending on the version selected (AB, or 0A, or 0B), the PO check valve is in both A and B ports, or in A port only, or in B port only (see hydraulic symbols).

The pilot ratio in 3:1, consequently, the pilot pressure needs to be at least 1/3, or 33% of the load induced pressure in the actuator before Check Valve opens, and oil can return to tank.

The body of these elements in made of Yellow Zinc Plated (Cr+3) Cast Iron (CI). Hydraulic Ports A2 and B2 are size G3/8 or G1/2 or ¾-16 UNF 2-B (SAE8).

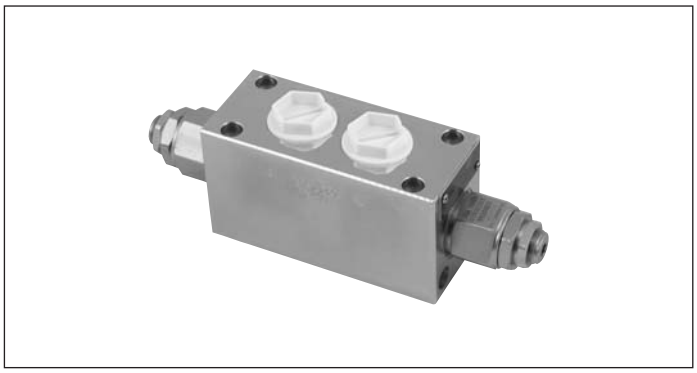
Bosch Rexroth AG, RE 18301-46/02.2016

Flangeable elements with secondary pressure relief valves single or double

EDCM/EDCMF-VM5

RE 18301-47
Edition: 02.2016
Replaces: 07.2012



Description

These modular secondary elements can be flange mounted on top of the EDC elements machined with the interfacing surface.

They let through free flow to the A (or B) port until pressure increases and reaches the pressure setting; then they release flow into the Tank channels (T).

The maximum secondary pressure in line A, or B, can be adjusted through the adjuster screw (2).

The body (1) is made of Yellow Zinc Plated (Cr+3) Cast Iron (CI). Hydraulic Ports A2 and B2 are size G3/8 and G1/2; with the modular version (M) is possible to flange the others type of EDCM-modular-elements avaible..

End Elements basic

TC-00-__-

RE 18301-60
Edition: 02.2016
Replaces: 07.2012

Description

The outlet elements TC-00-__ are available in two versions:
- Body made of Black Anodized Aluminium (Al).
- Body made of Yellow Zinc plated (Cr+3) Cast Iron (CI).

They are employed as end plates to plug the P and T channels of the ED elements of the Directional Valve Assembly, when there are no downstream operators.

Technical data

Bosch Rexroth AG, RE 18301-63/02.2016

Outlet Elements
with Pressure Relief Valve
and with P, T and M ports for downstream operators

TC-04-__-

RE 18301-64
Edition: 02.2016
Replaces: 07.2012

Description

The outlet elements TC-04-__ are employed to connect the P and T channels of the ED elements of the Directional Valve Assembly to the P1 and T1 ports for downstream operators. They incorporate a pressure relief cartridge which controls the maximum pressure in the P1 line. The relief setting can be checked through the Test Point port M. The TC-04-__ elements are available with body made of Black Anodized Aluminium (Al).
Hydraulic Ports P1 and T1 are size G 3/8, and Test Point port (M) is G 1/4.

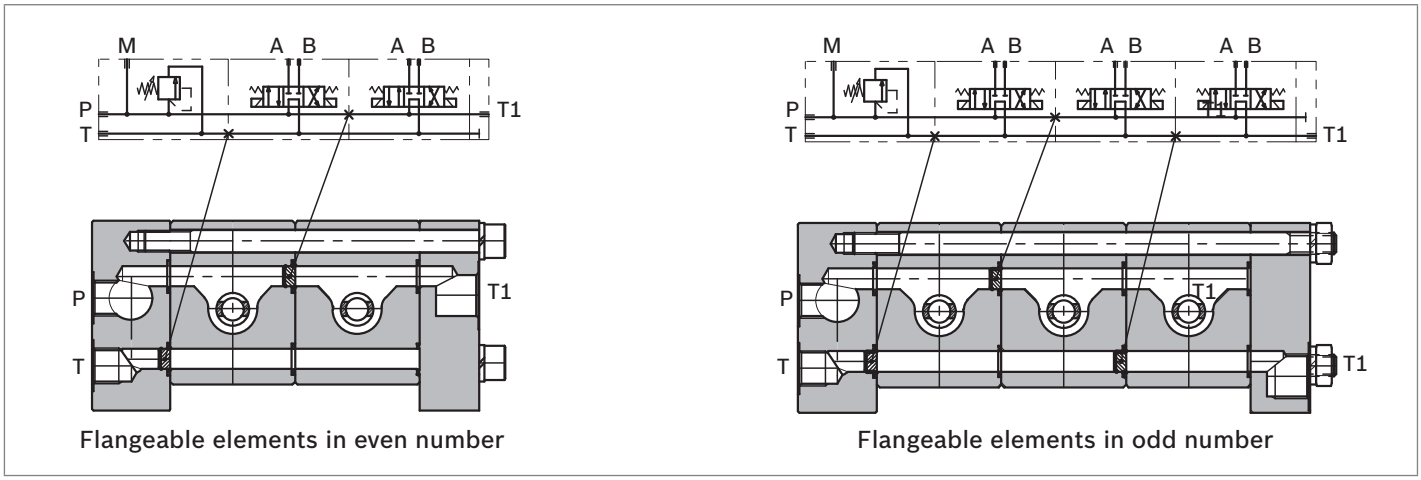
Series circuits



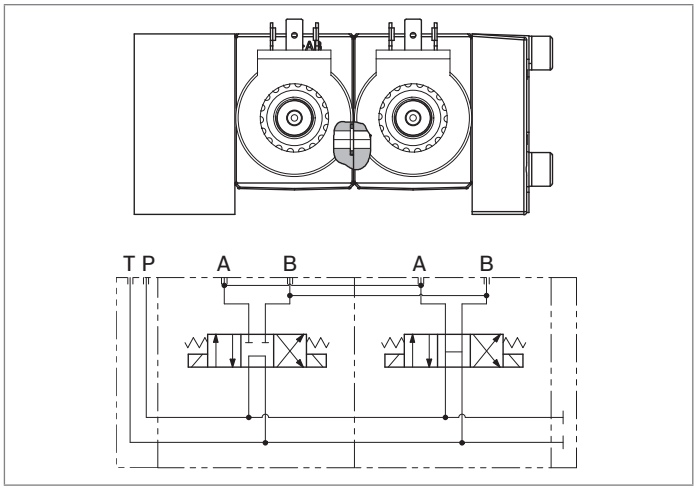
Flangeable elements in even number

Flangeable elements in odd number

To have information about the pressure drops on elements, see the (DELTA P-Q) curves of P>T of A201 circuit of ED1 (RE 18301-01) or ED2 (RE 18301-02) modular elements.

Hydraulic Symbol with intermediate element between A and B lines

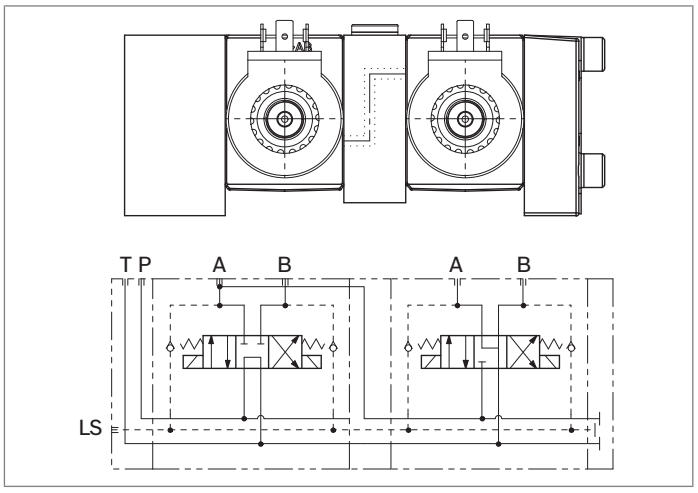
Flangeable elements with A and B ports in one side



scheme 1

Also available flangeable elements with A and B ports in one side, oriented either toward the inlet (TE) side, or toward the outlet (TC) side (see Hydraulic symobol 1).

Flangeable elements with A and B ports in one side, and with an intermediate body for connection of A and P



scheme 2

For flangeable elements with A and B ports in one side there is also a flangeable body to connect the A port of one element to the P port of the following element (see Hydraulic symobol 2).

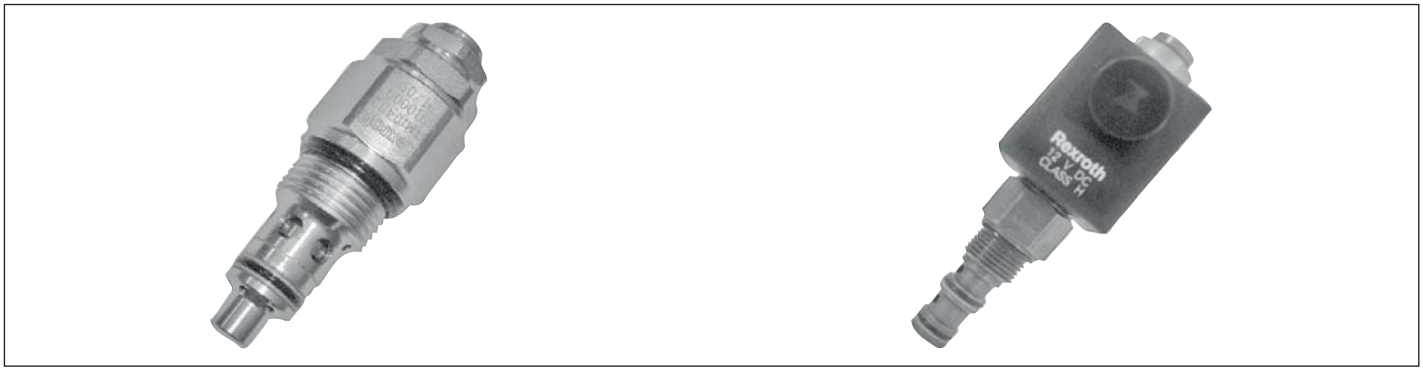
Bosch Rexroth AG, RE 18301-90/05.2016

Nominal sizes 08 to 10, special cavities

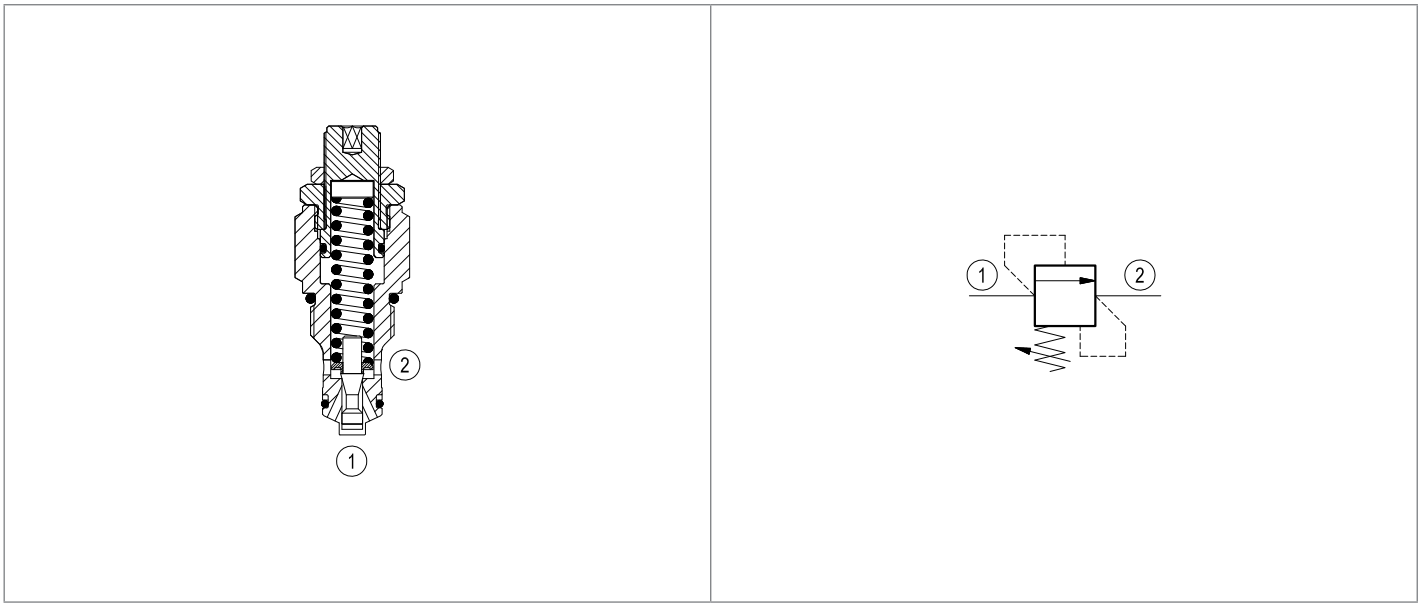
RE 18301-91
Edition: 05.2016
Replaces: 07.2012



Contents

Relief, direct acting guided poppet type Common cavity, Size 10

VMD1.040 0T.M1.03 - X - 99 - Z



Description

Flow is blocked from 1 to 2 until pressure increases to meet the selected valve setting, lifting the poppet from its seat and allowing relief flow through port 2 to tank. Pressure at port 2 is additive to the relief setting of the valve. The unique Bosch Rexroth Oil Control poppet design provides enhanced stability at all flows and pressures.

Performance

Size 4
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 20 l/min (5.3 gpm)
Ports G 1/4

General specifications

3 way 2 position valve.
Directional spool valve with direct solenoid control.
Hydraulic / pneumatic pilot , or manual push and twist control available as option.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage.
Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Optional manual override (push-button or screw type).
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

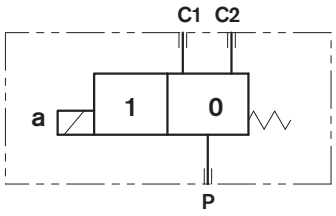
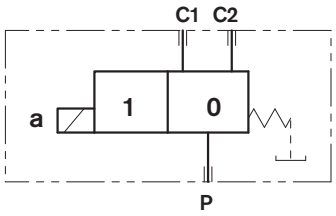
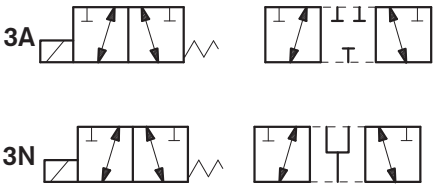
Drain type I



Drain type E



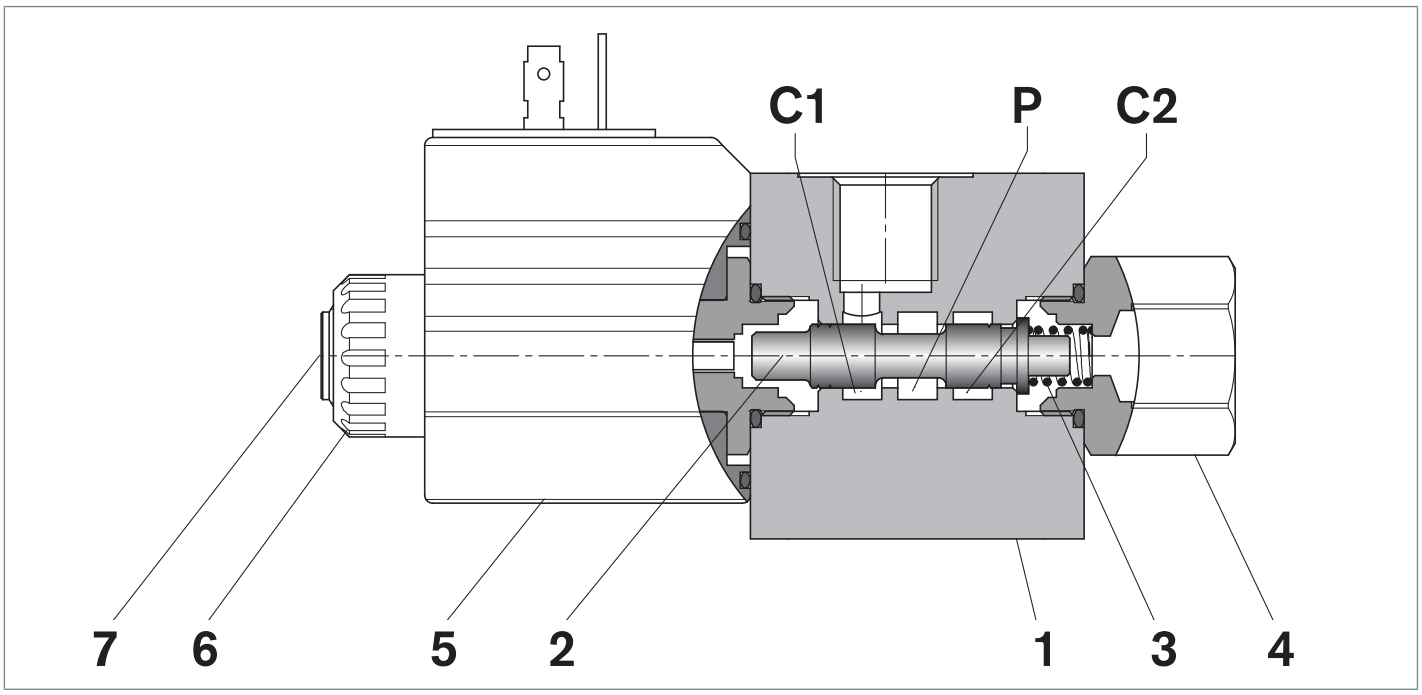
Spool variants



1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Functional description



A valve basically consists of a housing **(1)**, a control spool **(2)**, a return spring **(3)** and a solenoid **(5)**. It is designed to select which one of two circuits **(C1 or C2)** is to be supplied with the oil delivered from one single hose **(P)**: with spool in position **“0”**, when the solenoid is de-energized, the flow goes from **P** to **C1**, with spool in position **“1”**, when the solenoid is energized the flow goes from **P** to **C2**.
With the coil de-energized, the return spring **(3)** pushes back the spool **(2)** and holds it in position **“0”**.
The coil **(5)** is fastened to the tube by the ring nut **(6)**.
The manual override **(7)** allows to shift the spool **(2)** also in case of voltage shortage.
An external drain **(4)**, to be connected to tank, ensures shifting operations also at higher working pressure.
Hydraulic / pneumatic pilot control for spool shifting is available upon request.

Technical data

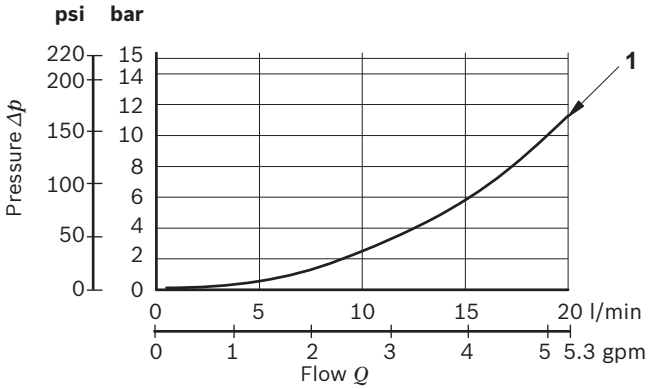
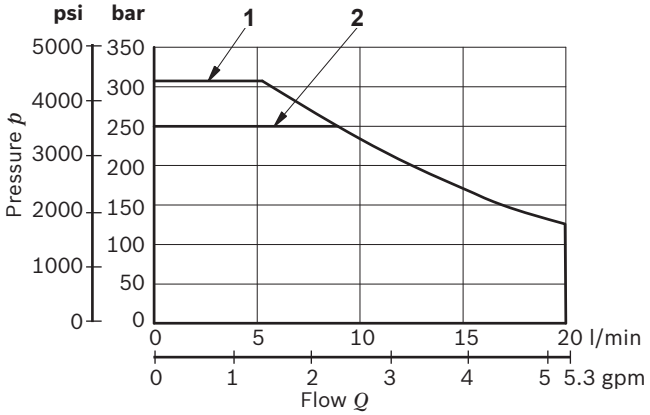
Characteristic curves



Flow path	Curve no.
P1 > C1	1
P1 > C2	1

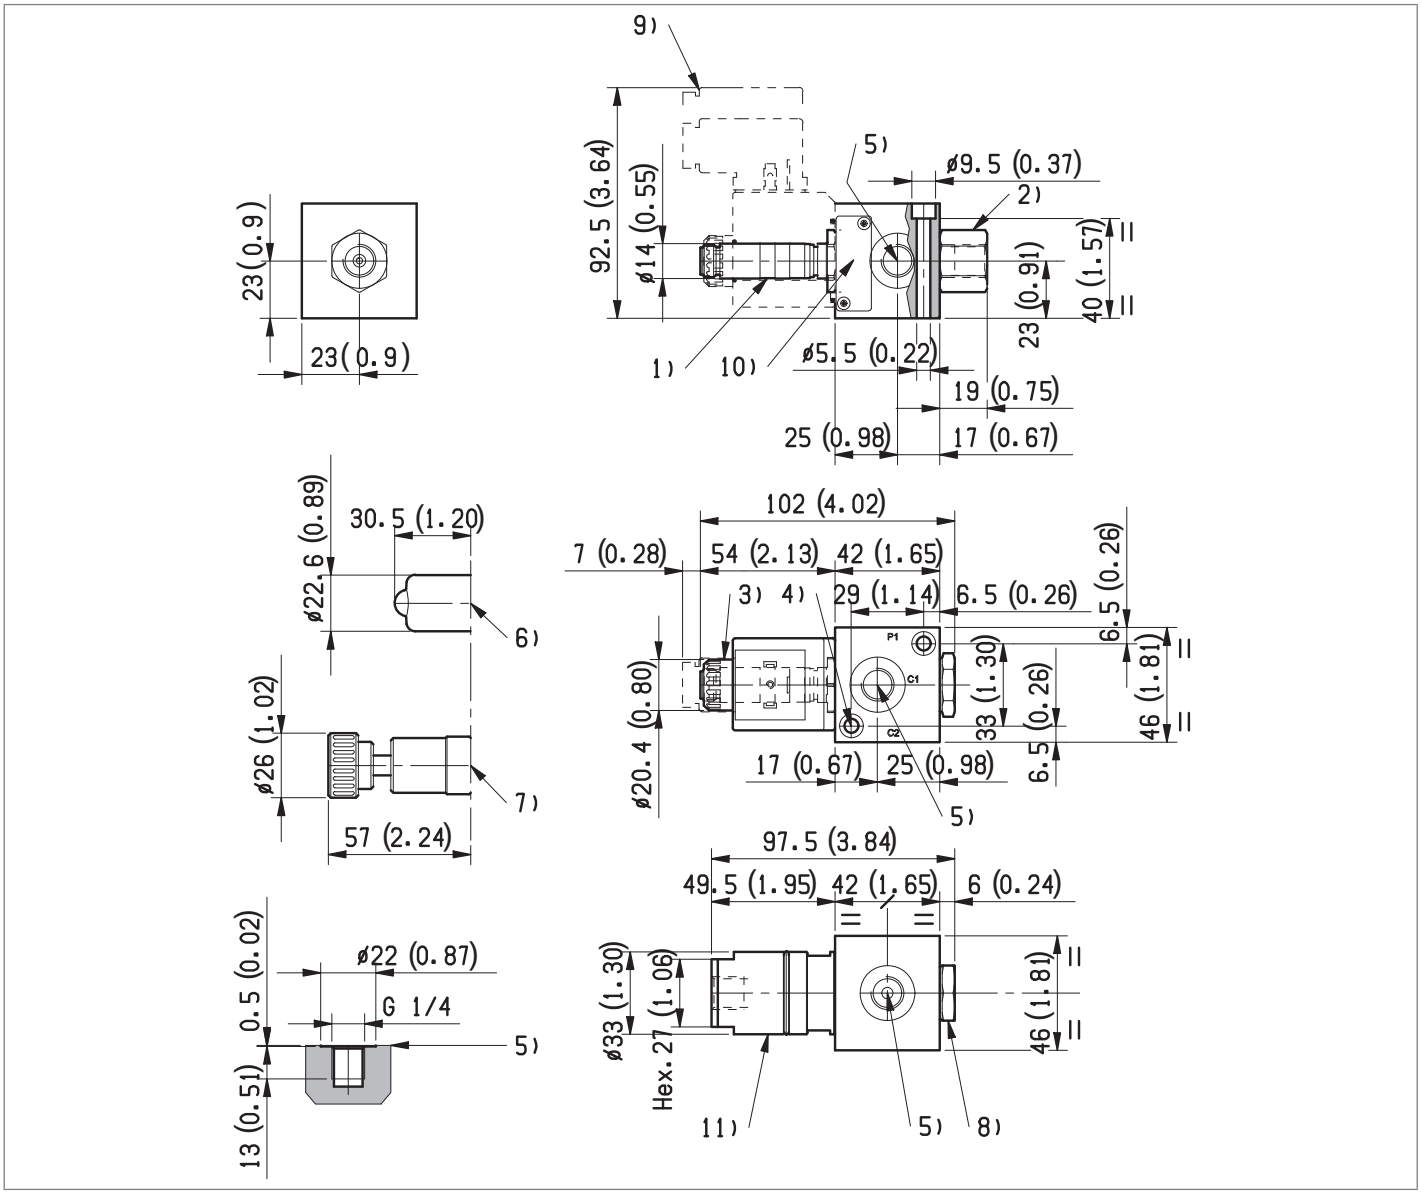
Measured with hydraulic fluid ISO-VG32 at 45° ±5 °C (113° ±9 °F); ambient temperature 20 °C (68 °F).

Performance limits



Drain type	Curve No.
External (-E-)	1
Internal (-I-)	2

External dimensions and fittings



1 Solenoid tube Ø 14 mm (0.55 inch).
2 Plug for version with external drain.
3 Ring nut for coil locking Ø 20,4 mm (8 inch).
Torque 3 – 4 Nm (2.2 – 3.0 ft-lb).
4 Two through holes for installation. Recommended screws M5 with strength class DIN 8.8. Torque 5-6Nm(3.6-4.4 ft-lb).
5 Ports P, C1, C2, External drain, hydraulic/pneumatic pilot port G 1/4.
6 Optional push-button type manual override for spool opening: it is pressure stuck to the ring nut 5-6Nm (3.7-4.4 ft-lb) for coil locking. Mat no. R933000042.
7 Optional screw type manual override for spool opening: it is screwed torque 6-7Nm (4.4-5.2 ft-lb) to the tube as replacement of the coil ring nut. Mat no. R933000021.
8 Plug for version with internal drain.
9 Minimum clearance needed for connector removal.
10 Identification label.
11 Hydraulic, or pneumatic pilot connector.

3/2 ways/positions flow diverters L705... (VS81-VS82-VS85)

RE 18302-02
Edition: 02.2016
Replaces: 05.2014

Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 60 l/min (15.85 gpm)
Ports G 3/8 - G 1/2 - SAE8

General specifications

3 way 2 position valve.
Directional spool valve with direct solenoid control.
Hydraulic / pneumatic pilot, or manual push and twist control available as option.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage.
Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Optional manual override (push-button or screw type).
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

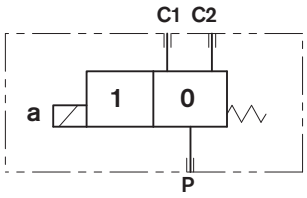
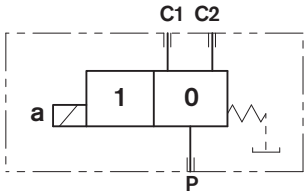
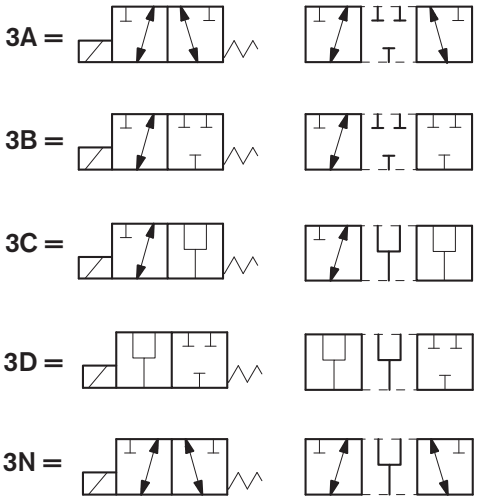
Drain type I



Drain type E



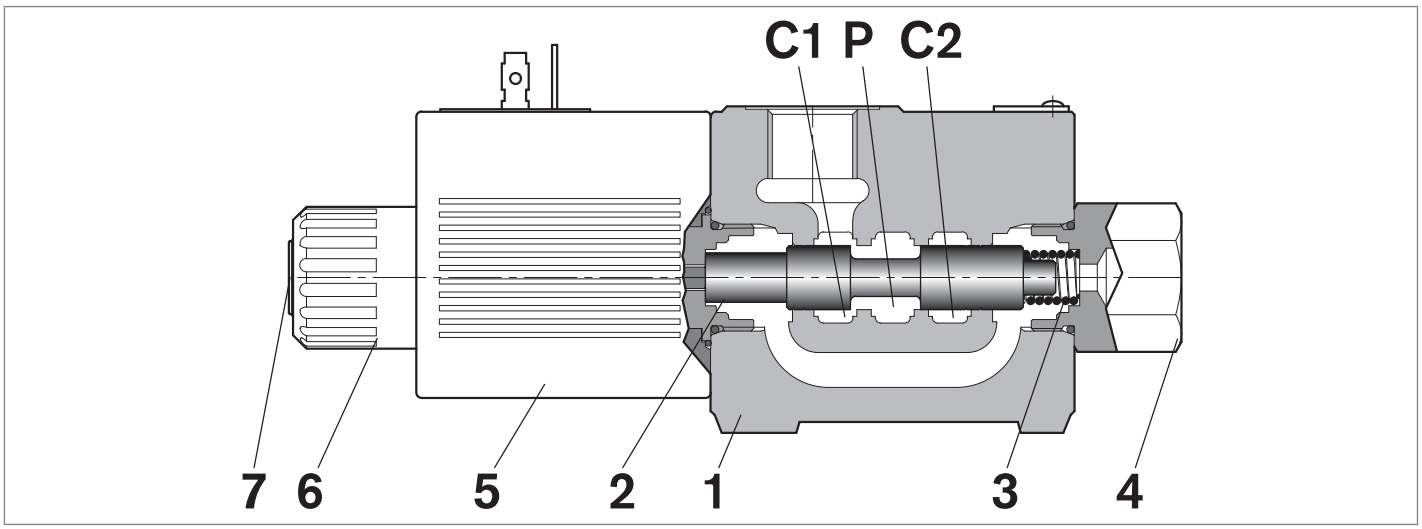
Spool variants



1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Functional description



A valve basically consists of a housing (**1**), a control spool (**2**), a return spring (**3**) and a solenoid (**5**). It is designed to select which one of two circuits (**C1** or **C2**) is to be supplied with the oil delivered from one single hose (**P**): with spool in position "**0**", when the solenoid is de-energized, the flow goes from **P** to **C1**, with spool in position "**1**", when the solenoid is energized the flow goes from **P** to **C2**.
With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position "**0**".
The coil (**5**) is fastened to the tube by the ring nut (**6**).
The manual override (**7**) allows to shift the spool (**2**) also in case of voltage shortage.
An external drain, to be connected to tank, ensures shifting operations also at higher working pressure.
Hydraulic / pneumatic pilot control, or manual push and twist control for spool shifting are available upon request.

6/2 ways/positions

Designation	Description	Ports/Size	Code	Data sheet	Page
6/2 ways/positions flow diverters	VS120, VS125, VS129	G 1/4, SAE 4, JIS B 1/4 / Size 4	L710_	18302-04	799
6/2 ways/positions flow diverters	VS151, VS152, VS155	G 3/8, G 1/2, SAE 8 / Size 6	L721_	18302-05	807
6/2 ways/positions flow diverters with ports C1, C2, C3 and C4 single side	VS161, VS165	G 3/8, SAE 8 / Size 6	L725_	18302-06	815
6/2 ways/positions flow diverters	VS311, VS312, VS315	G 1/2, G 3/4, SAE 12 / Size 10	L753_	18302-07	823
6/2 ways/positions piloted flow diverters – Size 16	VS400	G 1 / Size 16	L755	18302-11	831

6/2 ways/positions flow diverters L710... (VS120-VS125-VS129)

RE 18302-04
Edition: 02.2016
Replaces: 05.2014

Size 4
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 25 l/min (6.6 gpm)
Ports G 1/4 - SAE4 - JIS B 1/4

General specifications

6 way 2 position valve.
Directional spool valve with direct solenoid control.
Hydraulic / pneumatic pilot available as option.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage.
Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Optional manual override (push-button or screw type).
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

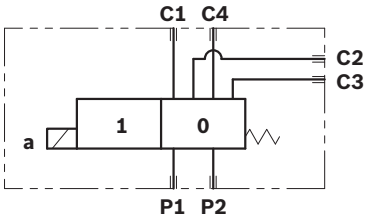
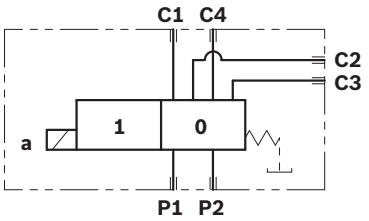
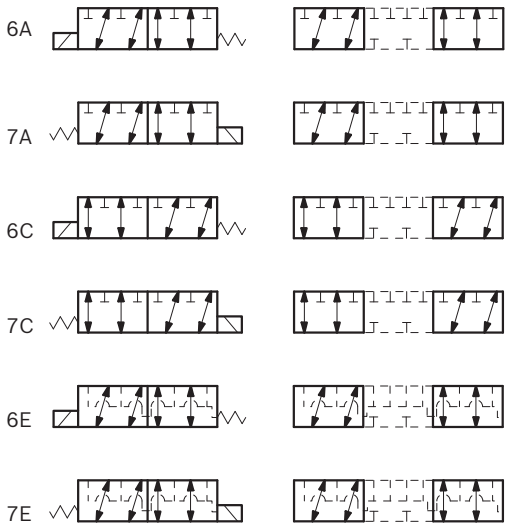
Drain type I



Drain type E



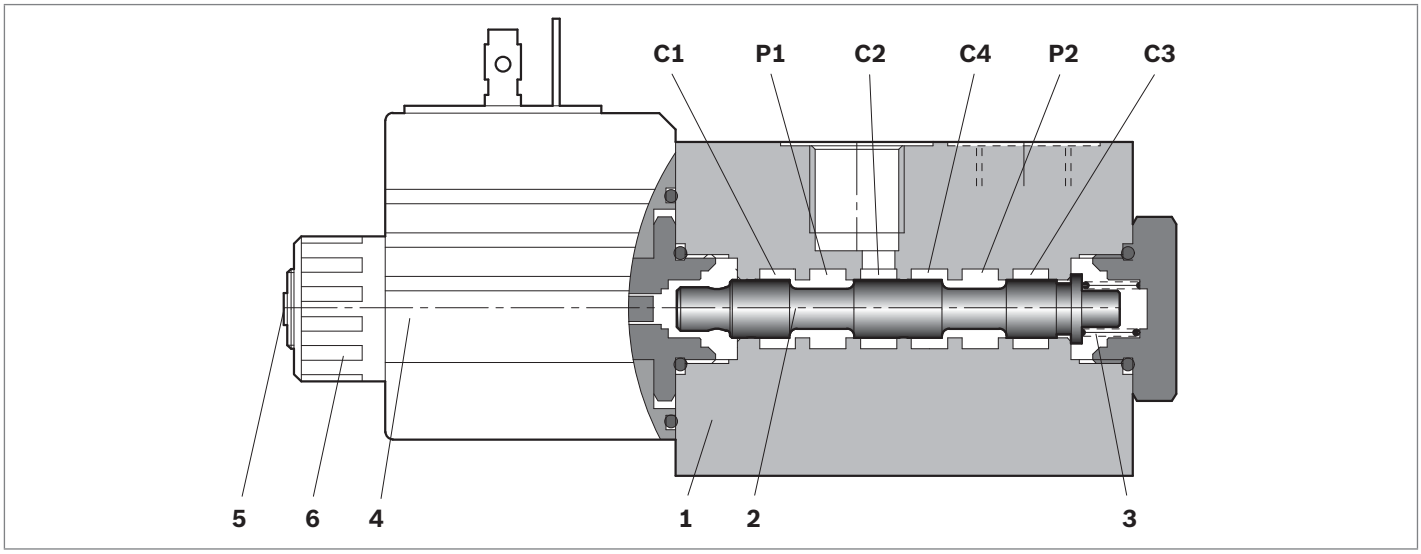
Spool variants



1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Functional description



A valve basically consists of a housing (**1**), a control spool (2), a return spring (3) and a solenoid (**4**). It is designed to connect two inlet lines **P1** – **P2** (normally a set of hoses) and divert them to either the outlet ports (**C1** – **C4**) with spool in position “0”, when the solenoid is de-energized, or to the outlet ports (**C2** – **C3**) with spool in position “1”, when the solenoid is energized.

With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position “0”.
The coil (**4**) is fastened to the tube by the ring nut (**6**).
The manual override (**6**) allows to shift the spool (**2**) also in case of voltage shortage.
Hydraulic / pneumatic pilot control for spool shifting is available upon request.

Bosch Rexroth AG, RE 18302-05/02.2016

6/2 ways/positions flow diverters with ports C1, C2, C3 and C4 single side L725.... (VS161-VS165)

RE 18302-06
Edition: 02.2016
Replaces: 05.2014

Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 60 l/min (15.85 gpm)
Ports G 3/8 - SAE8

General specifications

6 way 2 position valve.
Directional spool valve with direct solenoid control.
Hydraulic / pneumatic pilot, or manual push and twist control available as option.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage.
Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Optional manual override (push-button or screw type).
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

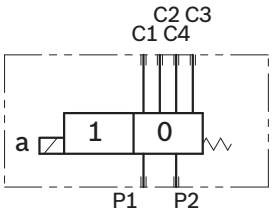
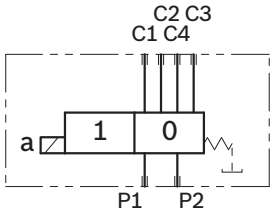
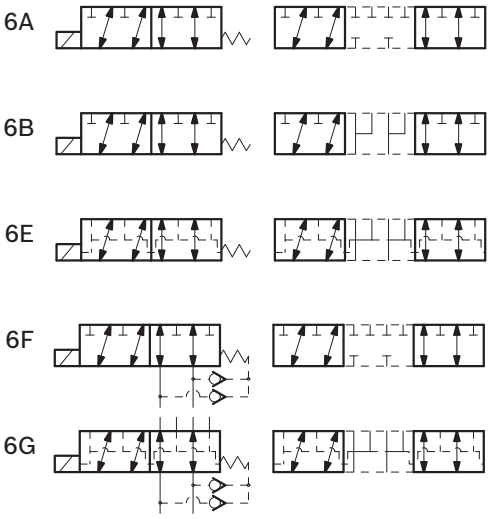
Drain type I



Drain type E



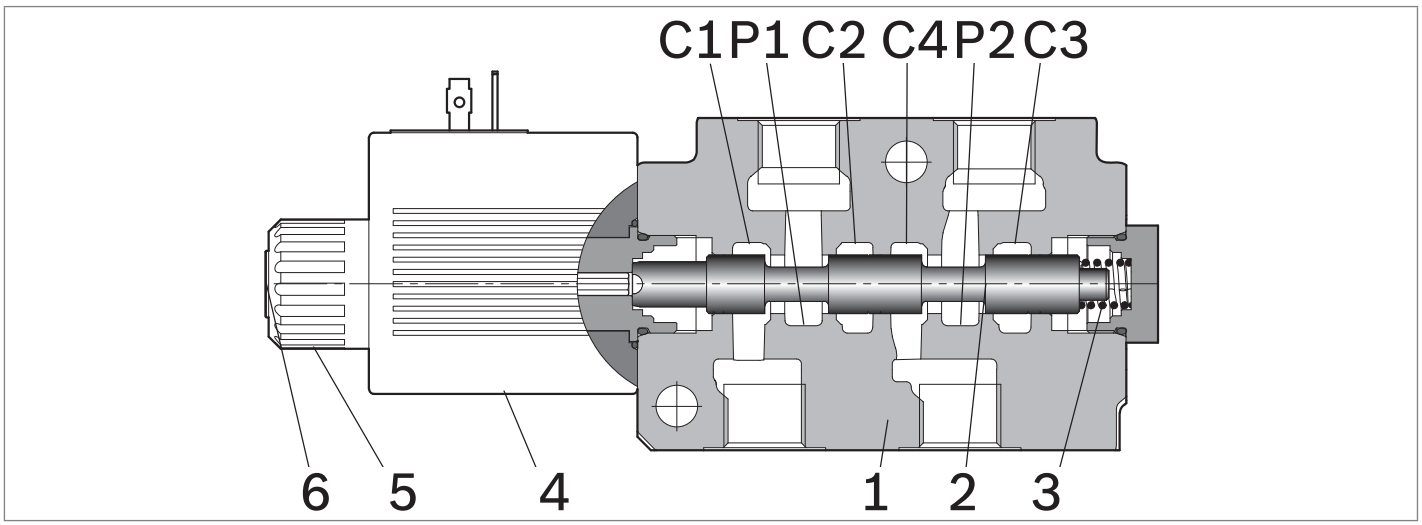
Spool variants



1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Functional description



A valve basically consists of a housing (**1**), a control spool (**2**), a return spring (**3**) and a solenoid (**5**). It is designed to connect two inlet lines **P1** – **P2** (normally a set of hoses) and divert them to either the outlet ports (**C1** – **C4**) with spool in position "**0**", when the solenoid is de-energized, or to the outlet ports (**C2** – **C3**) with spool in position "**1**", when the solenoid is energized.
With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position "**0**"
The coil (**4**) is fastened to the tube by the ring nut (**5**).
The manual override (**6**) allows to shift the spool (**2**) also in case of voltage shortage.
An external drain, to be connected to tank, ensures shifting operations also at higher working pressure.
Hydraulic / pneumatic pilot control, or manual push and twist control for spool shifting are available upon request.

Technical data

General		
Valve weight	kg (lbs)	3.0 (6.6)
Mounting position		unrestricted
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic		
Maximum pressure with external drain ("E" type)	bar (psi)	310 (4500)
Maximum pressure with internal drain ("I" type)	bar (psi)	250 (3625)
Maximum pressure with internal drain and 6F or 6G scheme	bar (psi)	310 (4500)
Maximum inlet flow	l/min (gpm)	60 (15.85)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.

Functional description

A valve basically consists of a housing (**1**), a control spool (**2**), a return spring (**4**), a 4/2 solenoid valve (**3**), a face mounted plate for optional drain and/or external hydraulic pilot.
The valve is designed to connect two inlet lines **P1** – **P2** (normally a set of hoses) and divert them to either the outlet ports (**C1** – **C4**) with spool in position "**0**", when the solenoid is de-energized, or to the outlet ports (**C2** – **C3**) with spool in position "**1**", when the solenoid is energized.
In fact, energizing the solenoid valve (**3**), the pilot pressure, after exceeding the 18 bar (261 psi) threshold, pushes the control spool (**2**) from position "**0**" into position "**1**".
With the solenoid de-energized, the return spring (**4**) pushes back the spool (**2**) and holds it in position "**0**".
The coil of the solenoid valve is fastened to the tube by a ring nut.

Technical data

General		
Valve weight	kg (lbs)	15.2 (33.5)
Mounting position		unrestricted
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)

General specifications

6 way 2 position valve.
Directional spool valve with direct solenoid control.
Hydraulic / pneumatic pilot availabe as option.
Usable as stand-alone, or as multiple stackable units.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage.
Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Optional manual override (push-button or screw type).
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

Spool variants

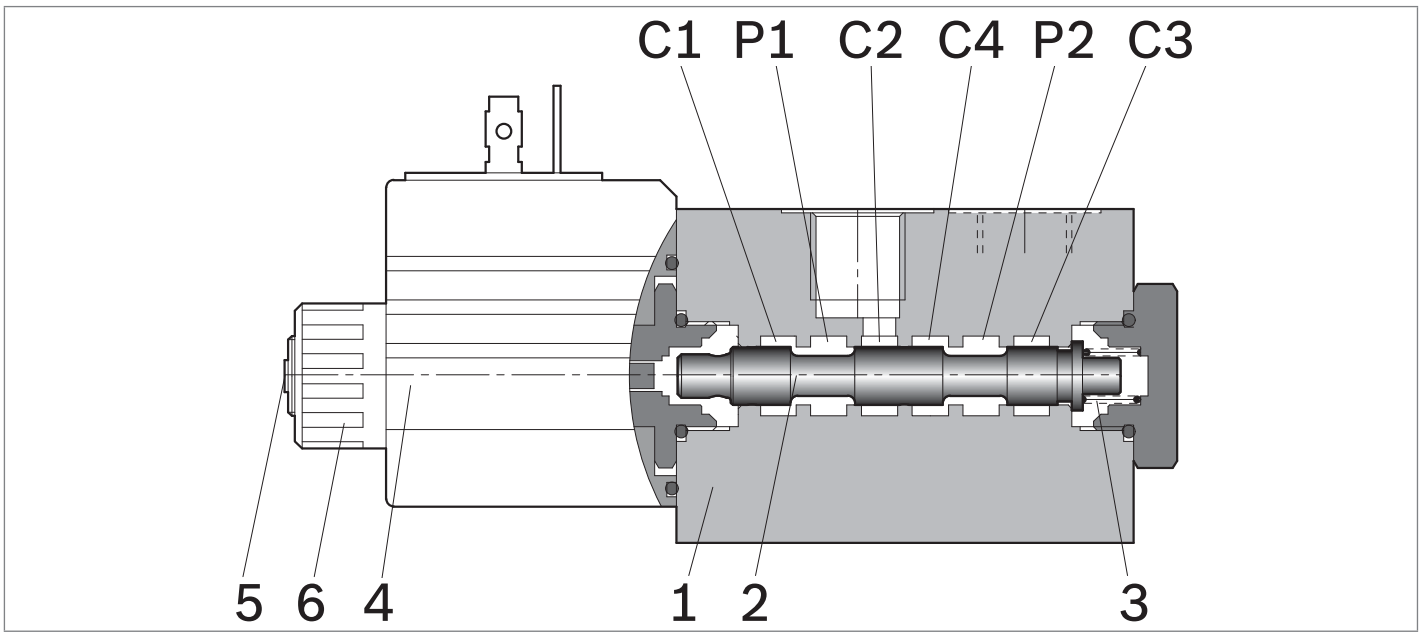
1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Bosch Rexroth AG, RE 18302-08/05.2014

Functional description



A valve basically consists of a housing (**1**), a control spool (**2**), a return spring (**3**) and a solenoid (**4**). It is designed to connect two inlet lines **P1** – **P2** (normally a set of hoses) and divert them to either the outlet ports (**C1** – **C4**) with spool in position "**0**", when the solenoid is de-energized, or to the outlet ports (**C2** – **C3**) with spool in position "**1**", when the solenoid is energized.

With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position "**0**".
The coil (**4**) is fastened to the tube by the ring nut (**6**).
The manual override (**5**) allows to shift the spool (**2**) also in case of voltage shortage.
Hydraulic / pneumatic pilot control for spool shifting is available upon request.

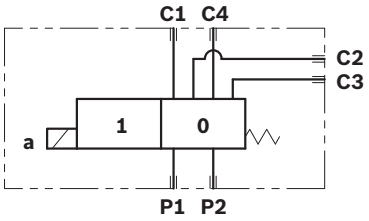
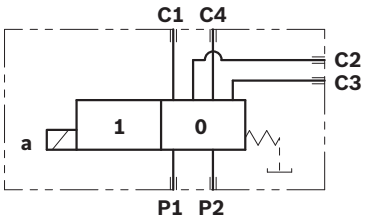
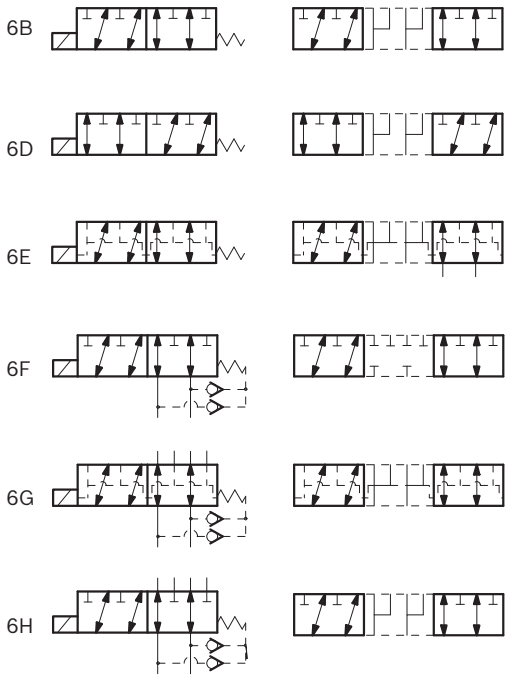
Drain type I



Drain type E



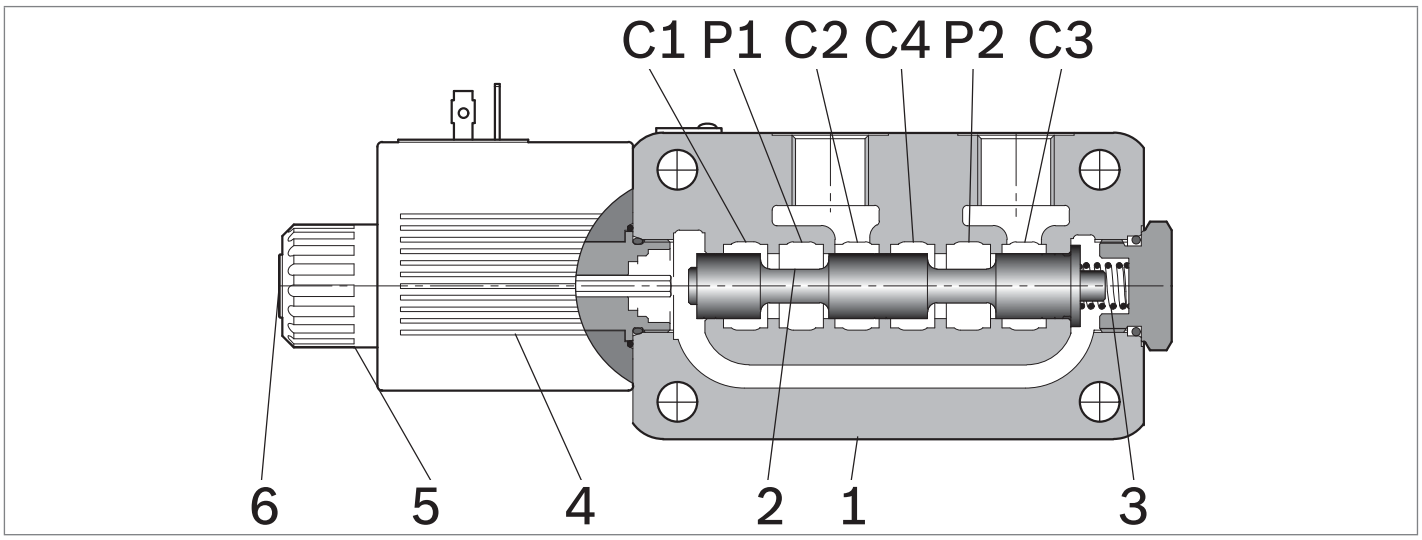
Spool variants



1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Functional description



A valve basically consists of a housing (**1**), a control spool (**2**), a return spring (**3**) and a solenoid (**5**). It is designed to connect two inlet lines **P1** – **P2** (normally a set of hoses) and divert them to either the outlet ports (**C1** – **C4**) with spool in position "**0**", when the solenoid is de-energized, or to the outlet ports (**C2** – **C3**) with spool in position "**1**", when the solenoid is energized.
With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position "**0**"
The coil (**5**) is fastened to the tube by the ring nut (**6**).
The manual override (**6**) allows to shift the spool (**2**) also in case of voltage shortage.
An external drain, to be connected to tank, ensures shifting operations also at higher working pressure.
Hydraulic / pneumatic pilot control, or manual push and twist control for spool shifting are available upon request.

Maximum flow 80 l/min (21.1 gpm)
Ports G 3/8 - G 1/2 - SAE10

General specifications

6 way 2 position valve.
Directional spool valve with direct solenoid control.
Hydraulic / pneumatic pilot, or manual push and twist control available as option.
Usable as stand-alone, or as multiple stackable units.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage.
Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Optional manual override (push-button or screw type).
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

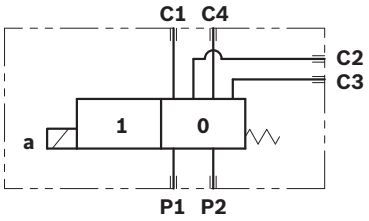
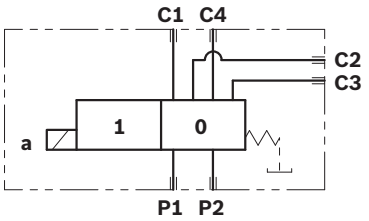
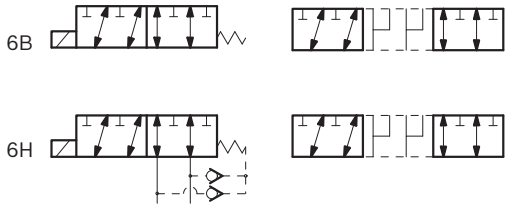
Drain type I



Drain type E



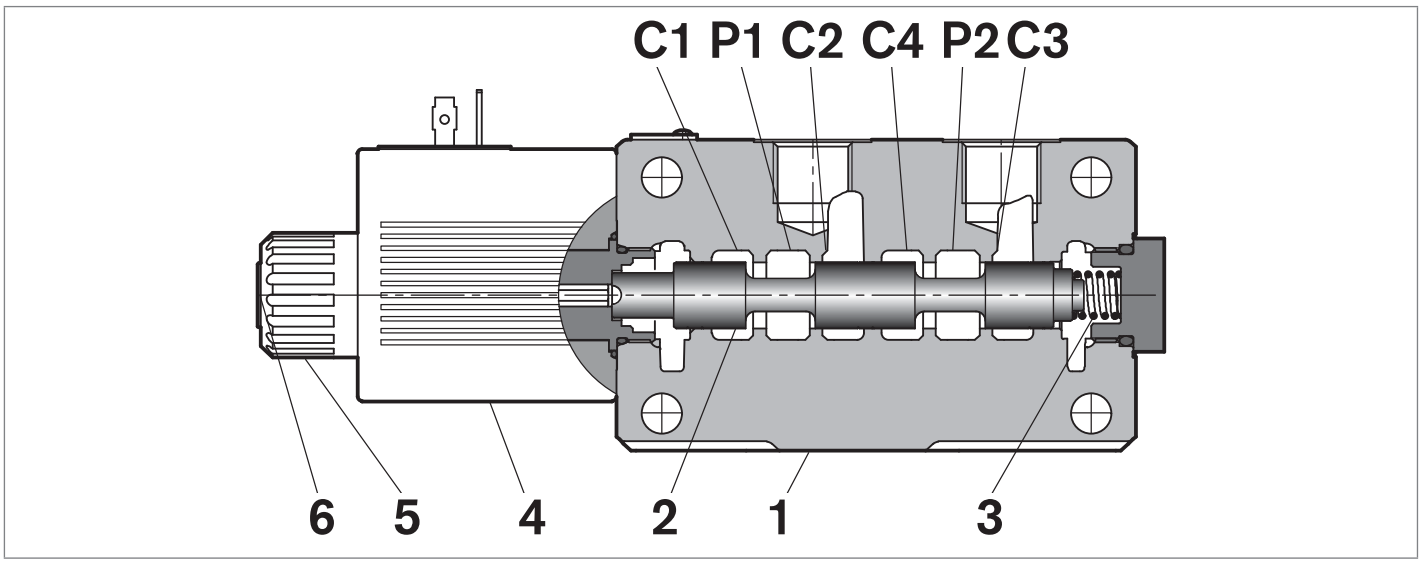
Spool variants



1) Minimum pressure 4 bar (58psi) with external drain (E), maximum pressure 200 bar (2901psi). With internal drain (I), at the minimum pressure (4 bar - 58psi), add the working pressure with ratio of 6,5:1. Example: With working pressure 100 bar (1450psi), minimum pilot pressure is 19.38 bar (281psi) ((100:6,5) + 4 bar (58psi)).

2) For connectors ordering code see data sheet RE 18325-90.

Functional description



A valve basically consists of a housing (**1**), a control spool (**2**), a return spring (**3**) and a solenoid (**5**). It is designed to connect two inlet lines **P1** – **P2** (normally a set of hoses) and divert them to either the outlet ports (**C1** – **C4**) with spool in position "**0**", when the solenoid is de-energized, or to the outlet ports (**C2** – **C3**) with spool in position "**1**", when the solenoid is energized.
With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position "**0**".
The coil (**5**) is fastened to the tube by the ring nut (**6**).
The manual override (**7**) allows to shift the spool (**2**) also in case of voltage shortage.
An external drain, to be connected to tank, ensures shifting operations also at higher working pressure.
Hydraulic / pneumatic pilot control, or manual push and twist control for spool shifting are available upon request.

Maximum operating pressure 210 bar (3045 psi)
Maximum flow 10 l/min (2.6 gpm)
Ports G 1/4 - SAE 4

General specifications

8 way 2 position valve.
Directional spool valve with direct solenoid control.
Normally used to set up the remote control (ISO – SAE) in the earth moving machine.
Control spool operated by solenoid, with easily removable coil fastened by a ring nut.
Wet pin tube for DC coil, with push rod for mechanical override in case of voltage shortage- Unrestricted 360° orientation of DC coil.
Control spool held in normal position by return spring.
Connectors available: DIN 43650 – ISO 4400, AMP Junior, DT04-2P (Deutsch), Free leads.

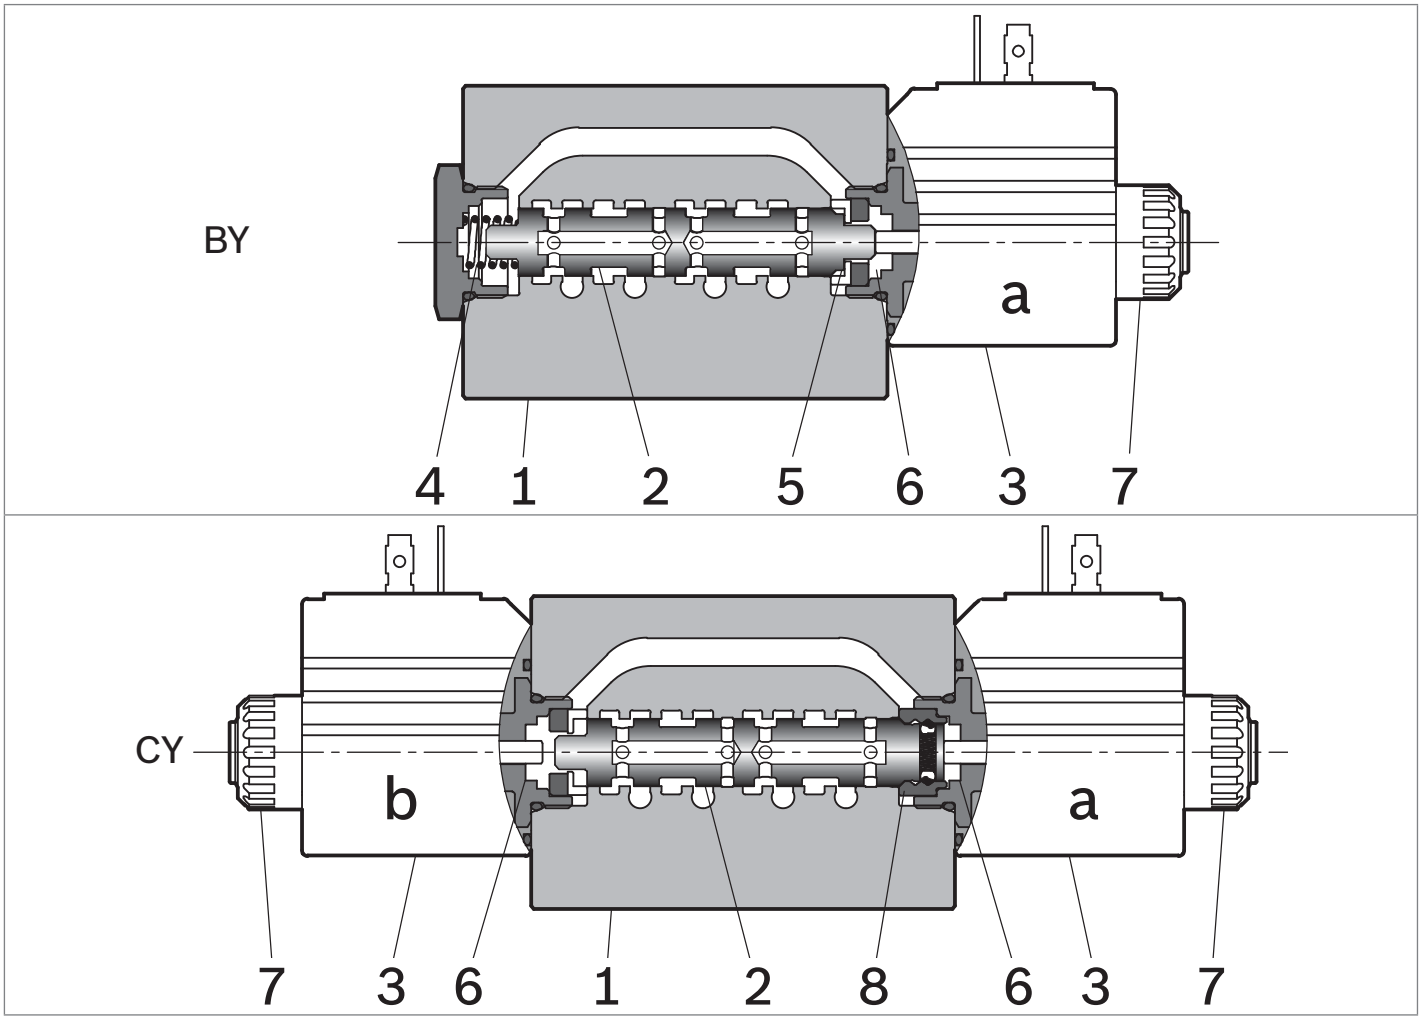
Functional description



A valve basically consists of a housing (**1**), a control spool (**2**), one or two solenoid (**3**), and a return spring (**4**).

L76510BY..
If the solenoid is energized, the spool goes from position "**0**" to position "**b**".
With the coil de-energized, the return spring (**3**) pushes back the spool (**2**) and holds it in position "**0**".
The coil (**6**) is fastened to the tube by the ring nut (**7**).

L76510CY..
If the solenoid "**a**" is energized, the spool goes from position "**a**" to position "**b**". The position "**b**" is held by the detent (**8**).
The return to position "**a**" is obtained energising the solenoid "**b**".
The coil (**6**) is fastened to the tube by the ring nut (**7**).

General specifications

4 way, 2 or 3 position spool type solenoid operated directional valves.
Stand-alone valve body intended for “in-line” application. Available with a choice of threaded ports; mounting surface with installation holes for direct fitting on the machine structure.
Zinc plated body with yellow trivalent chrome treatment.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube; they can be energized by AC current through special connectors with rectifier (RAC).
Plug-in connectors available: EN 175301-803 (was DIN 43650); AMP Junior; DT04-2P (Deutsch), free leads.
Coils removable.
Manual override (push button or lever type) available as option.
Spool variants (for different hydraulic schemes) are available for both 2 and 3 position versions.

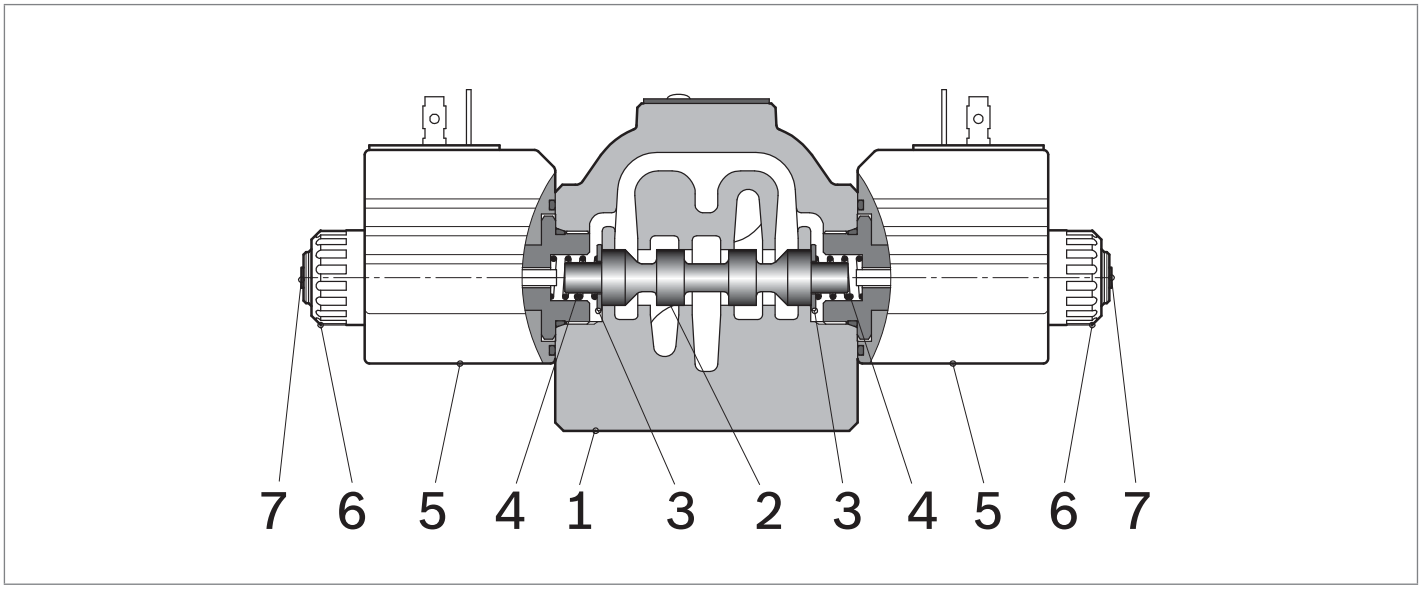
Functional description



The directional valves LC1F_Z...are compact direct operated solenoid valves which control the start, the stop, the direction of the oil flow. They basically consist of a housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**).
When energized, each solenoid (**5**) displaces the control spool (**2**) from its neutral-central position to the “a” or “b” position and the oil flow P is diverted to A, or to B. Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer back against the housing and the spool (**2**) returns in its neutral-central position “0”.
Each coil is fastened to the solenoid tube (**5**) by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General		
Valve weight with 2 solenoids	kg (lbs)	1.85 (4.01)
Valve weight with 1 solenoid	kg (lbs)	1.55 (3.42)
Mounting position		Unrestricted
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic		
Maximum pressure at P, A and B ports	bar (psi)	310 (4500)
Maximum pressure at T	bar (psi)	250 (3625)
Maximum inlet flow	l/min (gpm)	35 (9.25)
Maximum flow when using spool type A201-A301-A401	l/min (gpm)	30 (7.9)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.
Fluid Temperature	°C (°F)	–20....+80 (-4....+176) (NBR seals)

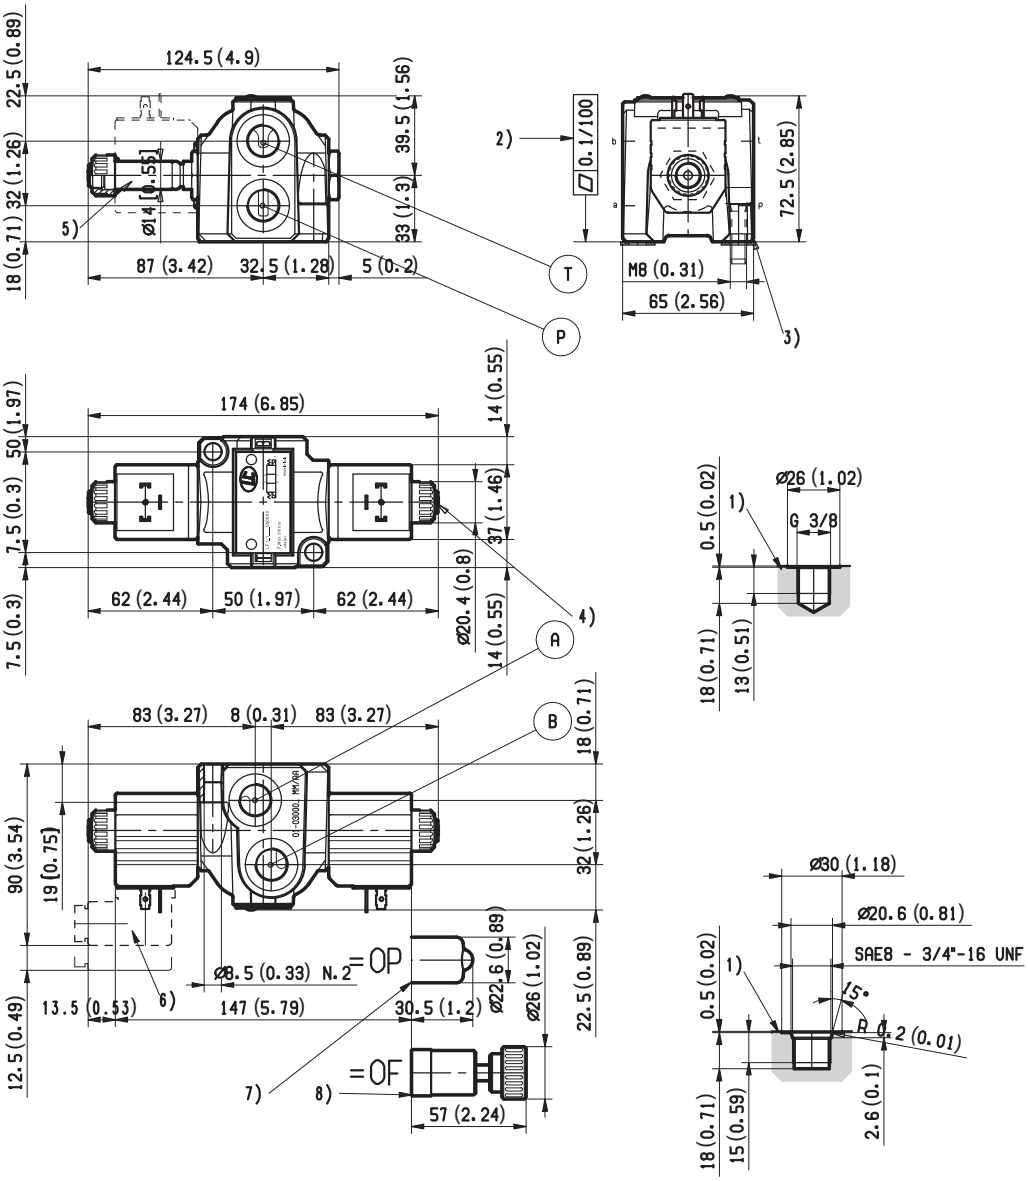
The performance curves are measured with flow going across and coming back, like P>A and B>T. With unequal IN and OUT flow, the actual total Δp can be considerably lower.

4

External dimensions and fittings



1 Work ports A, B, P, and T.
2 Flatness needed for mounting surface.
3 Two through installation holes reccomended screws M8x30 DIN 8.8: torque 20-22 Nm (14.7-16.2 ft-lb).
Must be ordered separately.
4 Ring nut for coil locking. Torque 3-4 Nm (2.2-3.0 ft-lb).
5 Solenoid tube Ø 14 mm (0.55 inch).
6 Clearance needed for connector removal.
7 Optional push-button manual override, 0P type, for spool opening: it is pressure stuck to the ring nut for coil locking.
Mat no. R933000042.
8 Optional screw manual override, 0F type, for spool opening: it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat no. R933000021.

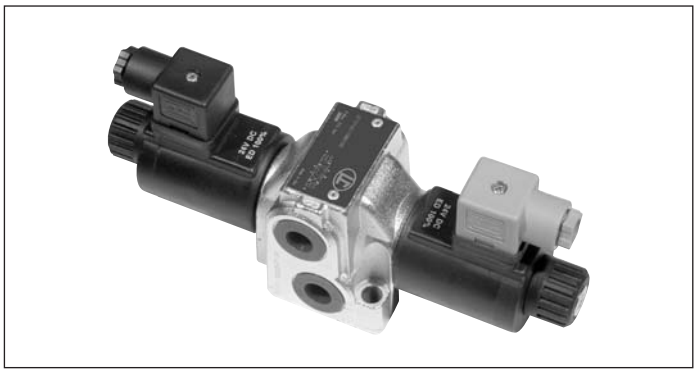
Bosch Rexroth AG, RE 18305-01/02.2016

Stand alone 4/3, 4/2 direct acting directional valve LF1_2... (LC1F-DZ)

RE 18305-02
Edition: 02.2016
Replaces: 10.2014



Size 6
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 70 l/min (18.5 gpm)
Port connections G 3/8 - G 1/2 - SAE8

General specifications

4 way, 2 or 3 position spool type solenoid operated directional valves.
Stand-alone valve body intended for “in-line” application. Available with a choice of threaded ports; mounting surface with installation holes for direct fitting on the machine structure.
Zinc plated body with yellow trivalent chrome treatment.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube; they can be energized by AC current through special connectors with rectifier (RAC).
Plug-in connectors available: EN 175301-803 (was DIN 43650); AMP Junior; DT04-2P (Deutsch), free leads.
Coils removable.
Manual override (push button or lever type) available as option.
Spool variants (for different hydraulic schemes) are available for both 2 and 3 position versions.

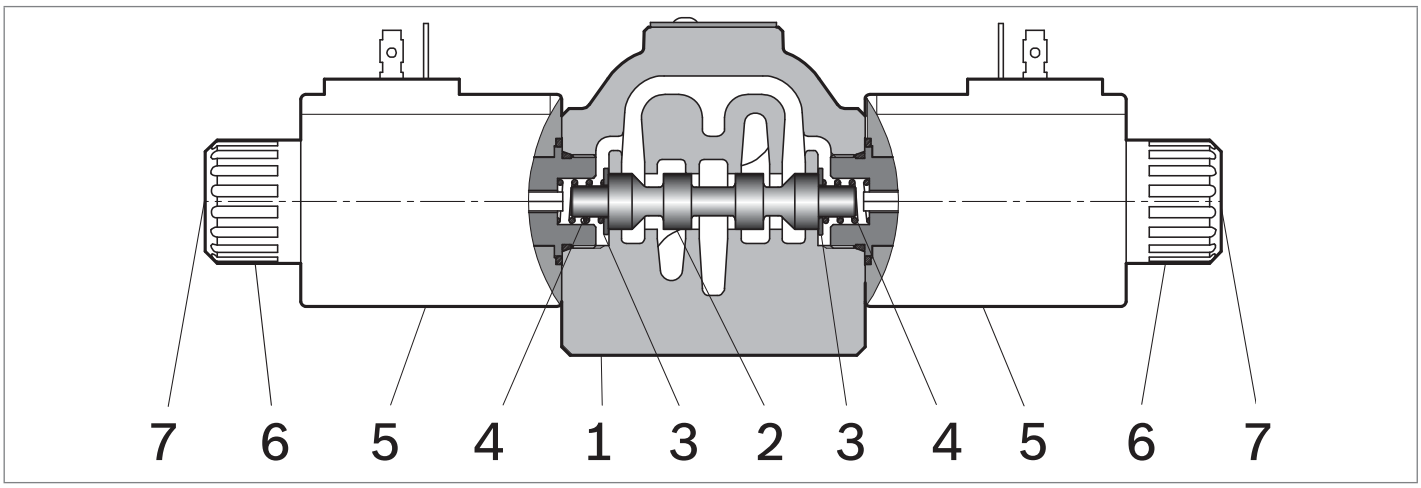
Functional description



The directional valves LC1F_DZ are compact direct operated solenoid valves which control the start, the stop, the direction of the oil flow. They basically consist of a housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**).
When energized, each solenoid (**5**) displaces the control spool (**2**) from its neutral-central position to the “a” or “b” position and the oil flow P is diverted to A, or to B.

Once the solenoid is de-energized, the return spring (**4**) pushes the spool thrust washer back against the housing and the spool (**2**) returns in its neutral-central position “0”. Each coil is fastened to the solenoid tube (**5**) by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General		
Valve element with 2 solenoids	kg (lbs)	2.23 (4.92)
Valve element with 1 solenoid	kg (lbs)	1.75 (3.86)
Valve element with 2 solenoids, with lever type emergency	kg (lbs)	2.53 (5.58)
Valve element with 1 solenoid, with lever type emergency	kg (lbs)	2.00 (4.41)
Mounting position		Unrestricted. Horizontal with spool type _5__
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic		
Maximum pressure at P, A and B ports	bar (psi)	310 (4500)
Maximum pressure at T [1)]	bar (psi)	250 (3625)
Maximum pressure on T when using spool type A211, A311, A411	bar (psi)	150 (2175)
Max pressure, with lever type emergency at T	bar (psi)	100 (1450)
Maximum inlet flow	l/min (gpm)	70 (18.5)
Maximum flow when using spool type A201, A301, A361, A401, A471, A2EA, G201, G209	l/min (gpm)	50 (13.2)
Maximum flow when using spool type A211, A311, A411 l/min (gpm)	l/min (gpm)	40 (10.6)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.

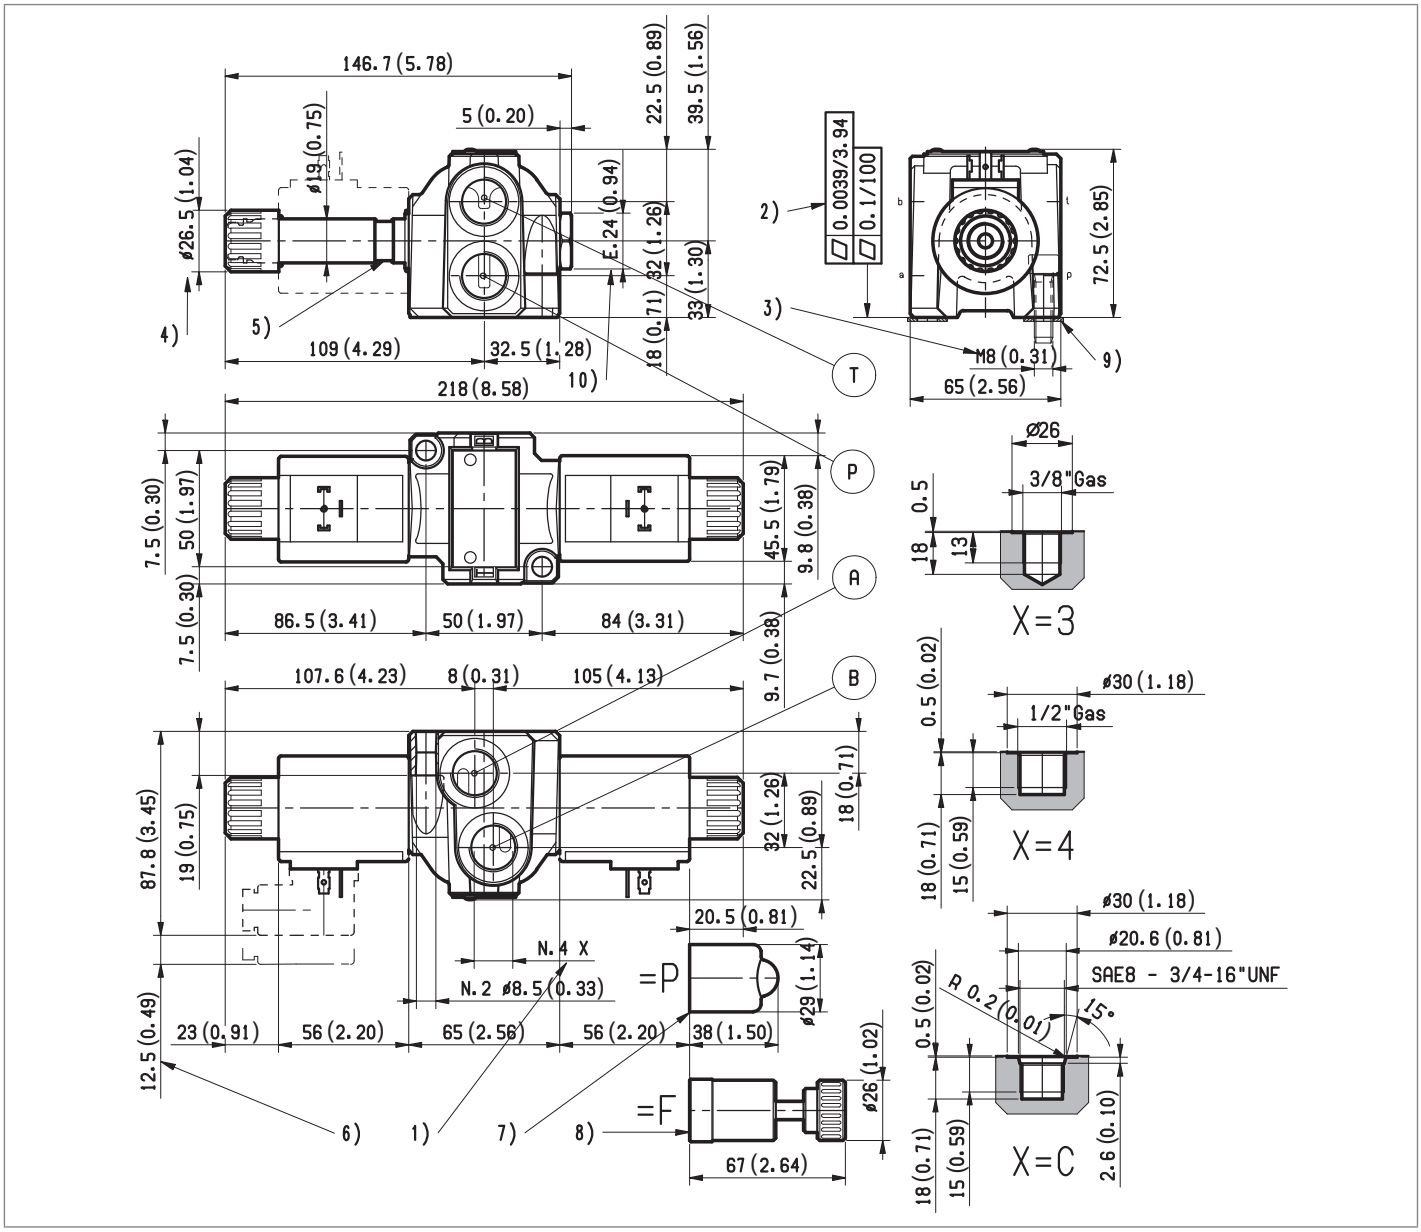
B201, B301, B401, B361, B471, B2EA, C201. C301, C401, C361, C471, C2EA, D201, D301, D401, D361, D471, E201, E301, E401, E361, E471, E2R1, F201, F2EA, G201,G209, K201, K209, K301, K401, U201, U369, T301, T361, T409, T479, N201, N501, M201, M501, L201, L501	4
X301,X401, Y301, Y401	5

The performance curves are measured with flow going across and coming back, like P>A and B>T. With “lever type” emergency control, the performance limits are slightly lower.

External dimensions and fittings



1 Work ports A, B, P, and T.
2 Flatness needed for mounting surface.
3 Two through installation holes reccomended screws M8x30 DIN 8.8.
Must be ordered separately.
4 Ring nut for coil locking. Torque 3-4 Nm (2.2-3 ft-lb).
5 Solenoid tube Ø 19 mm (0.75 inch).
6 Clearance needed for connector removal.
7 Optional push-button manual override for spool opening: it is pressure stuck to the ring nut for coil locking.
Code R933000043.
8 Optional screw type manual override for spool opening: it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat. no R933007215.
9 Kit ring nut for coil locking with seals.
Mat no. R933003529.
10 Plug for 2 positions versions (4/2).

Bosch Rexroth AG, RE 18305-02/02.2016

Stand alone 4/3, 4/2 direct acting directional valve LF2_1... (LC2F-DZ)

RE 18305-03
Edition: 04.2016
Replaces: 02.2016

Size 10
Series 00
Maximum operating pressure 250 bar (3600 psi)
Maximum flow 90 l/min (23.8 gpm)
Port connections G 1/2 – SAE10

General specifications

4 way, 2 or 3 position spool type solenoid operated directional valves.
Stand-alone valve body intended for “in-line” application. Available with a choice of threaded ports; mounting surface with installation holes for direct fitting on the machine structure.
Zinc plated body with yellow trivalent chrome treatment.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube; they can be energized by AC current through special connectors with rectifier (RAC).
Plug-in connectors available: EN 175301-803 (was DIN 43650); AMP Junior; DT04-2P (Deutsch), free leads.
Coils removable.
Manual override (push button or lever type) available as option.
Spool variants (for different hydraulic schemes) are available for both 2 and 3 position versions.

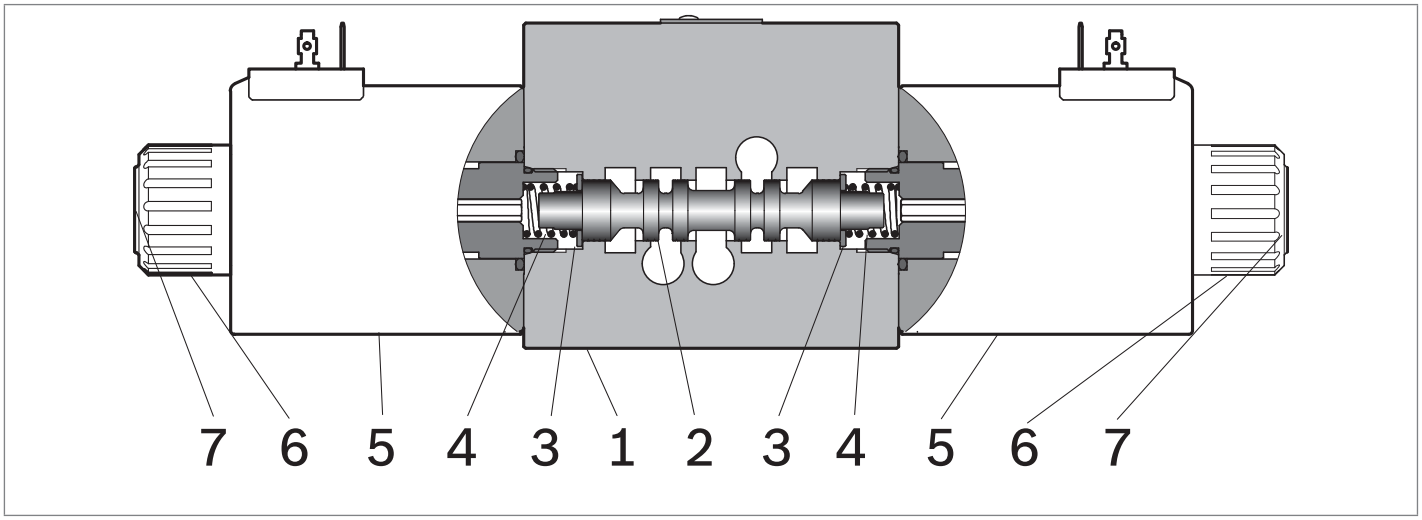
Functional description



The directional valves LC2F_DZ are compact direct operated solenoid valves which control the start, the stop, the direction of the oil flow. They basically consist of a housing (**1**) with a control spool (**2**), one or two solenoids (**5**), and one or two return springs (**4**).
When energized, each solenoid (**5**) displaces the control spool (**2**) from its neutral-central position to the “a” or “b” position and the oil flow P is diverted to A, or to B. Once the solenoid is de-energized, the return spring (4) pushes the spool thrust washer back against the housing and the spool (**2**) returns in its neutral-central position “0”.
Each coil is fastened to the solenoid tube (**5**) by a ring nut (**6**). A pin (**7**) allows to push the spool (**2**) in emergency conditions, when the solenoid cannot be energized, like in case of voltage shortage.

Technical data

General		
Valve weight with 2 solenoids	kg (lbs)	7.45 (16.42)
Valve weight with 1 solenoid	kg (lbs)	5.85 (12.9)
Ambient Temperature	°C (°F)	–20....+50 (-4....+122) (NBR seals)
Hydraulic		
Maximum pressure at P, A and B ports	bar (psi)	250 (3626)
Maximum pressure at T	bar (psi)	210 (3045)
Maximum inlet flow	l/min (gpm)	90 (23.8)
Maximum flow when using spool type **A201-A301-A401**	l/min (gpm)	80 (21.1)
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems such as, for example:		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.
Fluid Temperature	°C (°F)	–20....+80 (-4....+176) (NBR seals)
Permissible degree of fluid contamination		ISO 4572: $\beta_x \geq 75$ X=12...15 ISO 4406: class 20/18/15 NAS 1638: class 9
Viscosity range	mm^2/s	5....420

Electrical					
Voltage type		DC			
Voltage tolerance (nominal voltage)	%	-10 .... +10			
Duty		Continuous, with ambient temperature ≤ 50°C (122°F)			
Coil wire temperature not to be exceeded	°C (°F)	150 (302)			
Maximum frequency	Hz	2			
Insulation class		H			
Compliance with		Low Voltage Directive LVD 73/23/EC (2006/95/EC), 2004/108/EC			
Coil weight with connection EN 175301-803	kg (lbs)	1.05 (2.3)			
Voltage	V	12	13	24	27
Voltage type		DC	DC	DC	DC

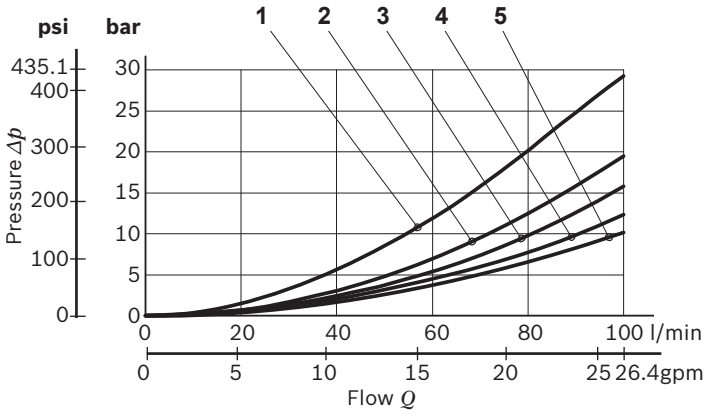
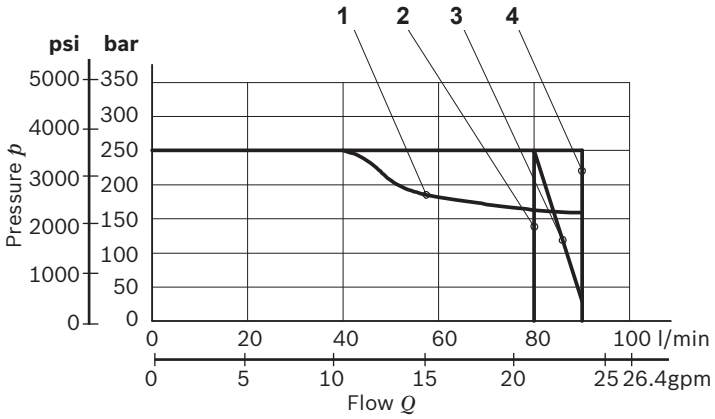
Characteristic curves



Spool Variant	Curve no.				
	P>T	P>A	P>B	A>T	B>T
A201,A301,A401	2	1	1	1	1
B201,B301,B401		4	4	3	3
C201,C301,C401	5	5	5	3	3
B201, B301, B401, B361, E201,E301,E401		4	4	3	3
X301,Y301,X401,Y401		5	4	4	3

Measured with hydraulic fluid ISO-VG32 at 45° ±5 °C (113° ±9 °F); ambient temperature 20 °C (68 °F).

Performance limits

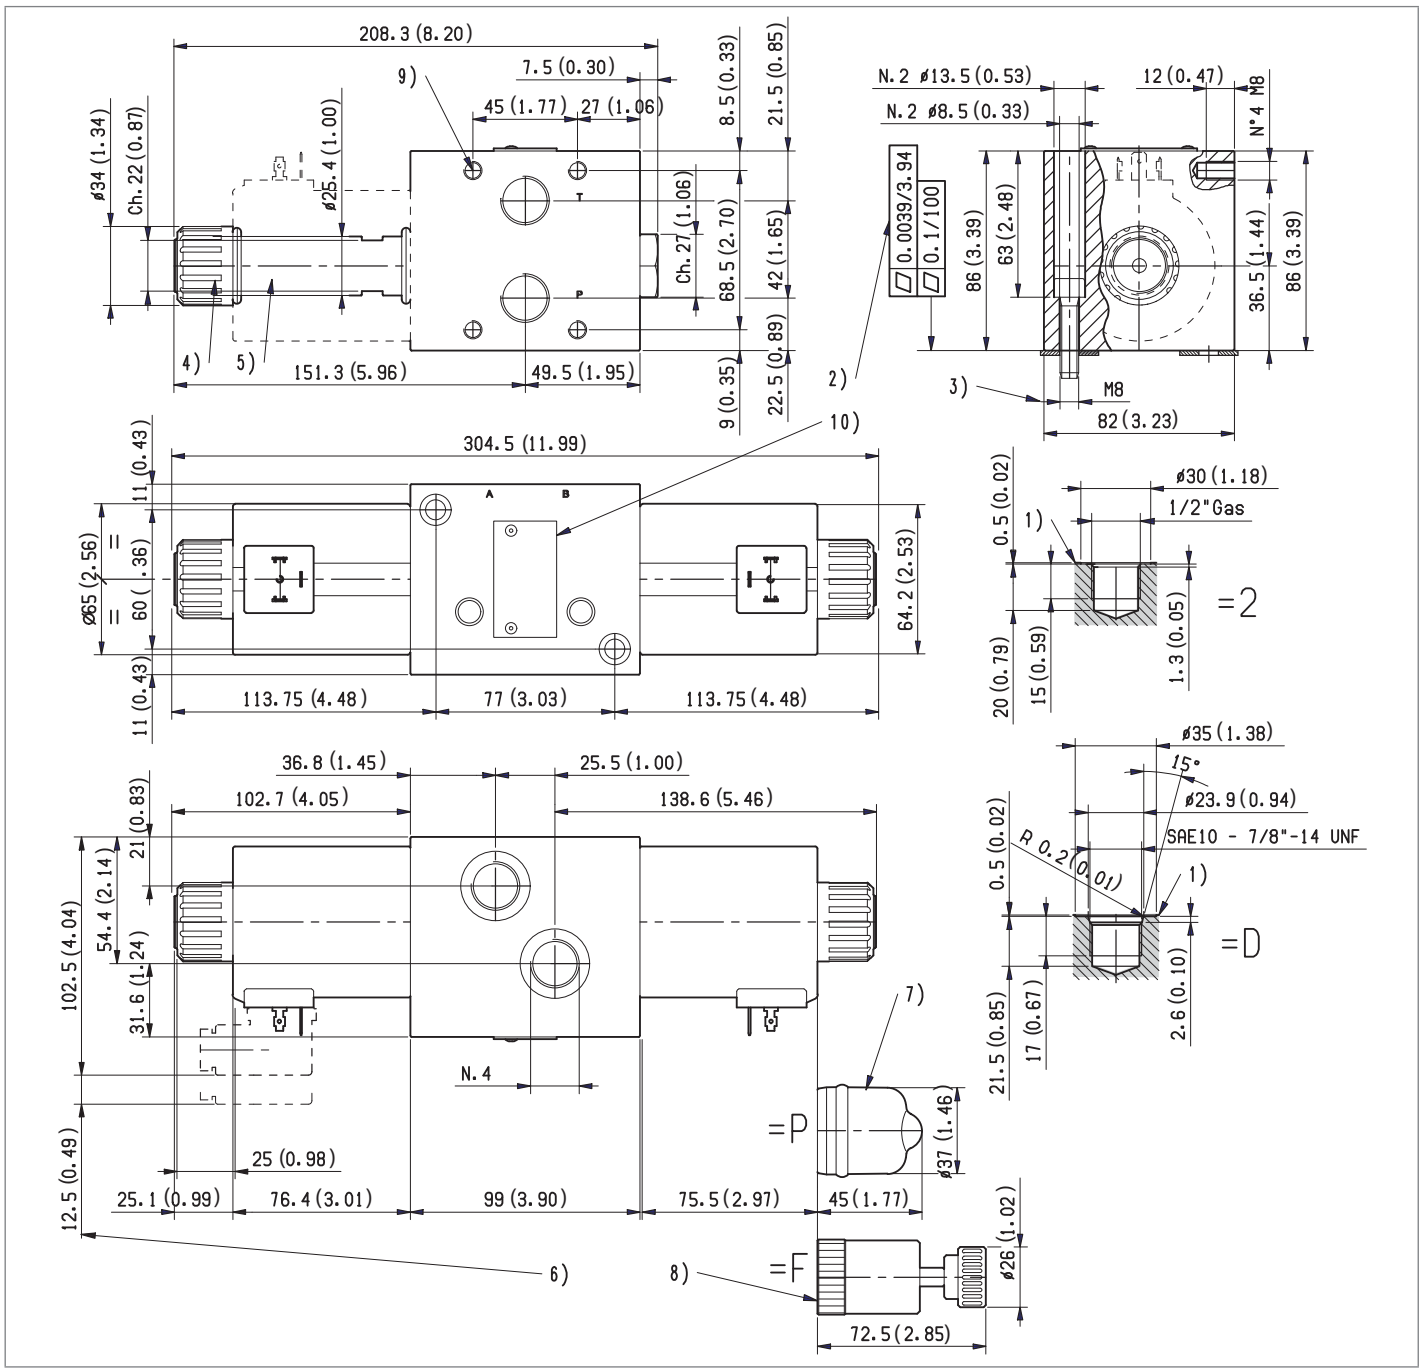


Spool Variant	Curve no.
E201, E301, E401	1
A201, A301, A401	2
X301, Y301, X401, Y401	3
B201, B301, B401, C201, C301, C401	4

The performance curves are measured with flow going across and coming back, like P>A and B>T. With unequal IN and OUT flow, the actual total Δp can be considerably lower.

4

External dimensions and fittings



1 Work ports A, B, P, and T.
2 Flatness needed for mounting surface.
3 Two through installation holes reccomended screws M8 DIN 8.8: torque 20-22 Nm (14.7-16.2 ft-lb).
Must be ordered separately.
4 Ring nut for coil locking 34 mm dia.
Torque 7-8 Nm (5.2-5.9 ft-lb).
5 Solenoid tube Ø 25,4 mm (1 inch).
6 Clearance needed for connector removal.
7 Optional push-button manual override for spool opening: it is pressure stuck to the ring nut for coil locking.
Code R933003424.
8 Optional screw type manual override for spool opening: it is screwed (torque 6-7 (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Code R933003713.
9 Four threaded holes M8 for fitting a secondary flangeable element on port A and B. Screws M8 with recommended strength class DIN 8.8: torque 20-22 Nm (14.7-16.2 ft-lb).
10 Identification label.

Bosch Rexroth AG, RE 18305-03/04.2016

Stand alone 4/3, 4/2 solenoid operated directional valve FAN DRIVE

(LF...)

RE 18305-04
Edition: 04.2016
Replaces: 02.2016

LF1 Size 6
LF2 Size 10
Series 00
LF1 Maximum operating pressure 310 bar (4500 psi)
LF2 Maximum operating pressure 250 bar (3600 psi)
LF1 Maximum flow 60 l/min (15.9 gpm)
LF2 Maximum flow 90 l/min (23.8 gpm)
Ports G 3/8 - G1/2 - SAE 8 - SAE10

General specifications

4 way, 3 position spool type solenoid operated directional valves which control or reverse the direction of the oil flow.
Stand-alone valve body intended for “in-line” application. Available with a choice of threaded ports; mounting surface with installation holes for direct fitting on the machine structure.
Zinc plated high strength cast iron body, with yellow trivalent chrome treatment.
Wet pin tubes for DC coils, with push rod for mechanical override; nickel plated surface.
Coils can be rotated 360° around the tube.
Plug-in connectors available: EN 175301-803 (was DIN 43650); AMP Junior; DT04-2P (Deutsch), free leads.
Coils fastened by ring nut: they are easily removable.
Manual override (push button or lever type) available as option.

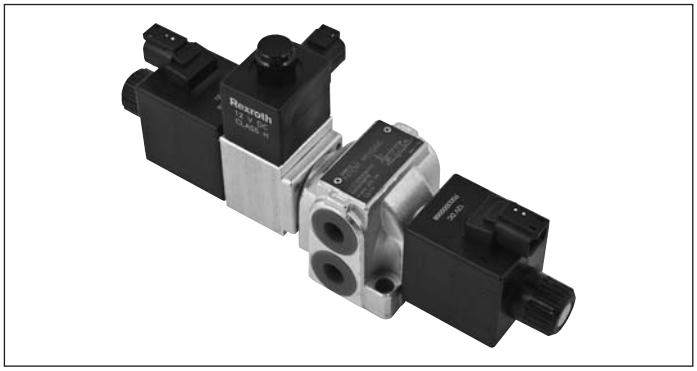
Bosch Rexroth AG, RE 18305-04/04.2016

Steering mode selection valve with electromechanical detent LF1_1STR3... (SMV2.0)

PATENT PENDING

RE 18305-10
Edition: 05.2015
Replaces: 09.14



Size 6
Series 00
Maximum operating pressure 210 bar (3046 psi)
Maximum peak pressure 230 bar (3336 psi)
Maximum flow 50 l/min (13.2 gpm)
Ports G 3/8 - G1/2 - SAE 8

General specifications

4/3 direct operated solenoid controlled directional valve with an electromagnetic mechanical detent on the control spool, specifically designed for steering mode selection.
Zero power consumption during two wheel steering mode.
Control spool with positive overlapping to reduce leakage and switching shocks.
Stand-alone zinc plated valve housing with threaded ports and fixing holes for direct line mounting.
Wet pin solenoid tubes for DC coils, with inherent push rod for mechanical override on the control spool; zinc plated.
Standard coil connections available in DIN and DEUTSCH (additional connections on request).

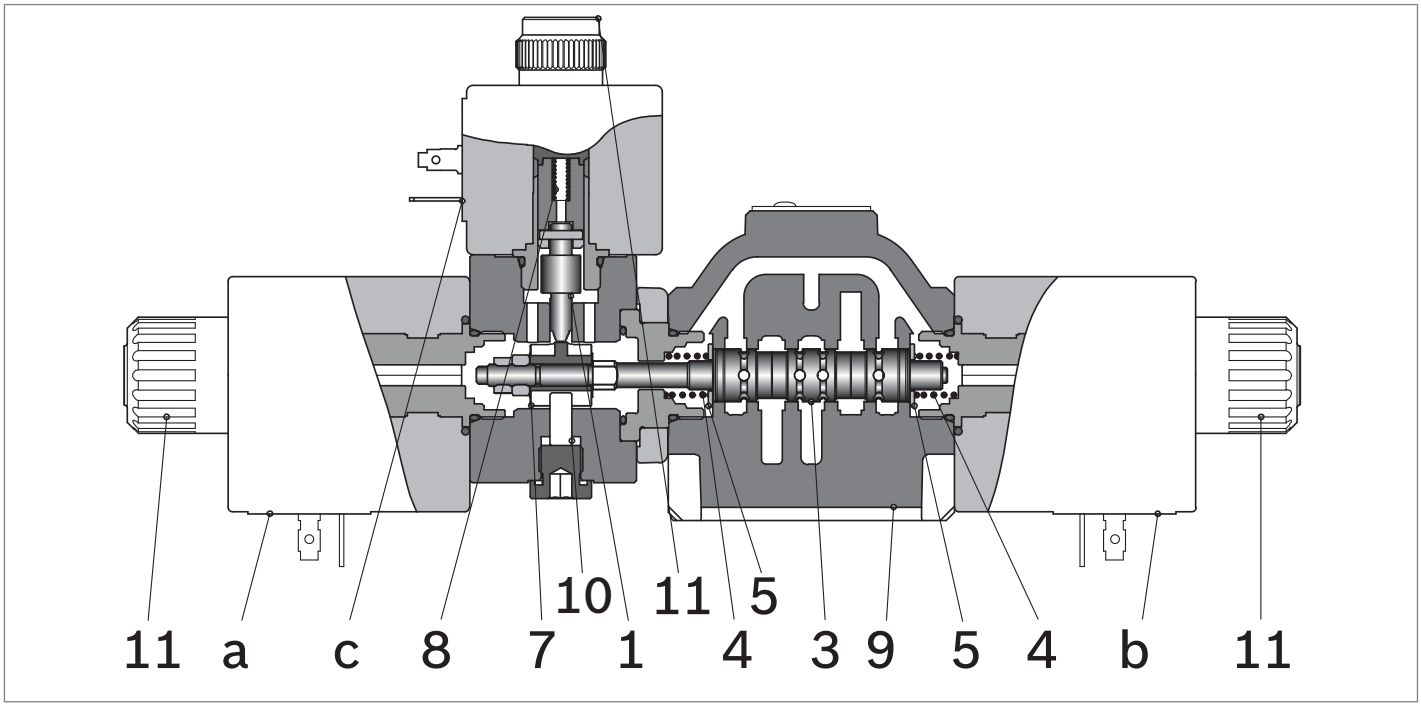
1) Choosing the nominal voltage of the coils "a" and "b" the nominal voltage of the coil "c" is automatically defined. For customization contact factory.
2) For "a" and "b" coils 13VDC coil "c"= 14VDC (see data sheet RE18325-90).
3) For "a" and "b" coils 27VDC coil "c"= 26VDC (see data sheet RE18325-90)

Functional description



The SMV2.0 directional control valves with electromagnetically actuated mechanical detent are used for selecting between three steering modes.
In the de-energized condition, the control spool (**3**) is held in the center position by return springs (**4**); the spring (**8**) pushes the detent pin(**1**) against the bushing (**7**). In this condition the valve is in the front steering configuration (2WS) as all of the coils are de-energized.
In order to switch the steering mode (see pictures below), it is necessary to first actuate the mechanical detent by energizing the coil "**c**" in order to allow the control spool to move.
Then, by energizing one of the coils "**a**" or "**b**", the control spool switches from the center position (2WS) to a different steering mode, 4WS-A or 4WS-B.
When a 4WS mode is selected, the control spool coil, "**a**" or "**b**", must continue to be energized during machine operation; it is also necessary to de-energize the coil "**c**" to lock the mechanical detent into position. The mechanical interference between the bushing (7) and the detent pin(**1**) locks the control spool and prevents unwanted movements generated from external agents. (i.e. short circuit on the coils "**a**" or "**b**").
The return springs guarantee the return to the center position by pushing on the washer (**5**) that is against the control spool.

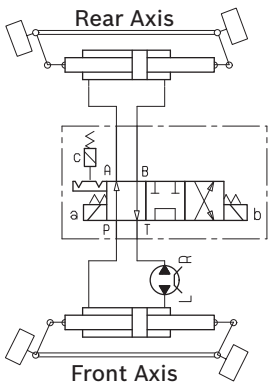
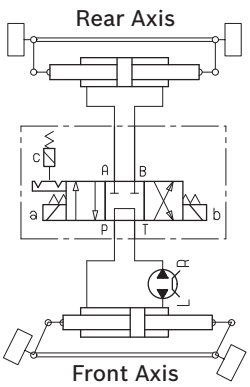
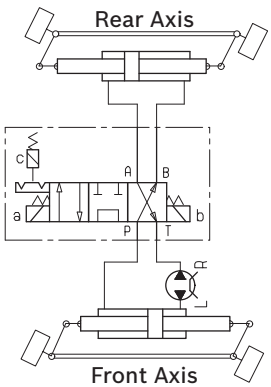
All wheel steering 4WS-A



Front steering 2WS



Crab steering 4WS-B



Logical sequence of Operation

The following shows the logical sequence of operation that guarantees the valve operates correctly.

Steering mode selection from 2WS to 4WS-A (locked)					
Time	**Coil A**	**Coil B**	**Coil C**	**Steering mode**	**note:**
Initial status 2WS	OFF	OFF	OFF	2WS	Current steering mode selection
t=0	OFF	OFF	ON	2WS	Coil C is energized to disengage mechanical detent.
t=50ms	ON	OFF	ON	transient 2WS -> 4WS-A	After 50ms, coil A can be energized (the reaction time of coil C).
t=150ms	ON	OFF	OFF	4WS-A (unlocked)	After 100ms, coil C can be de-energized (the reaction time of coil A).
t=200ms	ON	OFF	OFF	4WS-A (locked)	After 50ms the control spool is locked in position (the reaction time of the return spring of coil C).
To go from 2WS to 4WS-B, repeat operation above substituting A with B coil and B with A.					

Steering mode selection from 4WS-A (locked) to 2WS					
Time	**Coil A**	**Coil B**	**Coil C**	**Steering mode**	**note:**
Initial status 4WS-A (locked)	ON	OFF	OFF	4WS-A (locked)	Current steering mode selection
t=0	ON	OFF	ON	4WS-A (unlocked)	Coil C is energized to disengage mechanical detent.
t=50ms	OFF	OFF	ON	transient 4WS-A -> 2WS	After 50ms, coil A can be de-energized (the reaction time of coil C).
t=200ms	OFF	OFF	OFF	2WS	After 150ms, coil C can be de-energized (the reaction time of the return spring of coil A).
To go from 4WS-B (locked) to 2WS, repeat operation above substituting A with B coil and B with A.					

Steering mode selection from 4WS-A (locked) to 4WS-B (locked)					
Time	**Coil A**	**Coil B**	**Coil C**	**Steering mode**	**note:**
Initial status 4WS-A (locked)	ON	OFF	OFF	4WS-A (locked)	Current steering mode selection
t=0	ON	ON	ON	4WS-A (unlocked)	Selection of 4WS-B steering mode, and disengagement of the mechanical detent (both coil B and C are simultaneously energized).
t=50ms	OFF	ON	ON	transient 4WS-A -> 4WS-B	After 50ms coil A can be de-energised (coil B and centering spring shift the spool to the opposide side)
t=250ms	OFF	ON	OFF	4WS-B	After 200ms, coil C can be de-energized, initiating engagement of the detent.
t=300ms	OFF	ON	OFF	4WS-B	After 50ms, the control spool is locked in position (the reaction time of the return spring of coil C).
To go from 4WS-B (locked) to 4WS-A (locked), repeat operation above substituting A with B coil and B with A.					

2WS: two wheel steering.
4WS-A: four wheel steering (turn).
4WS-B: four wheel steering (crab).

The switching times in the table above are measured on test benches at defined hydraulic conditions (ISO6403). The operating conditions can significantly affect switching times. For this reason it is suggested to increase them as necessary.

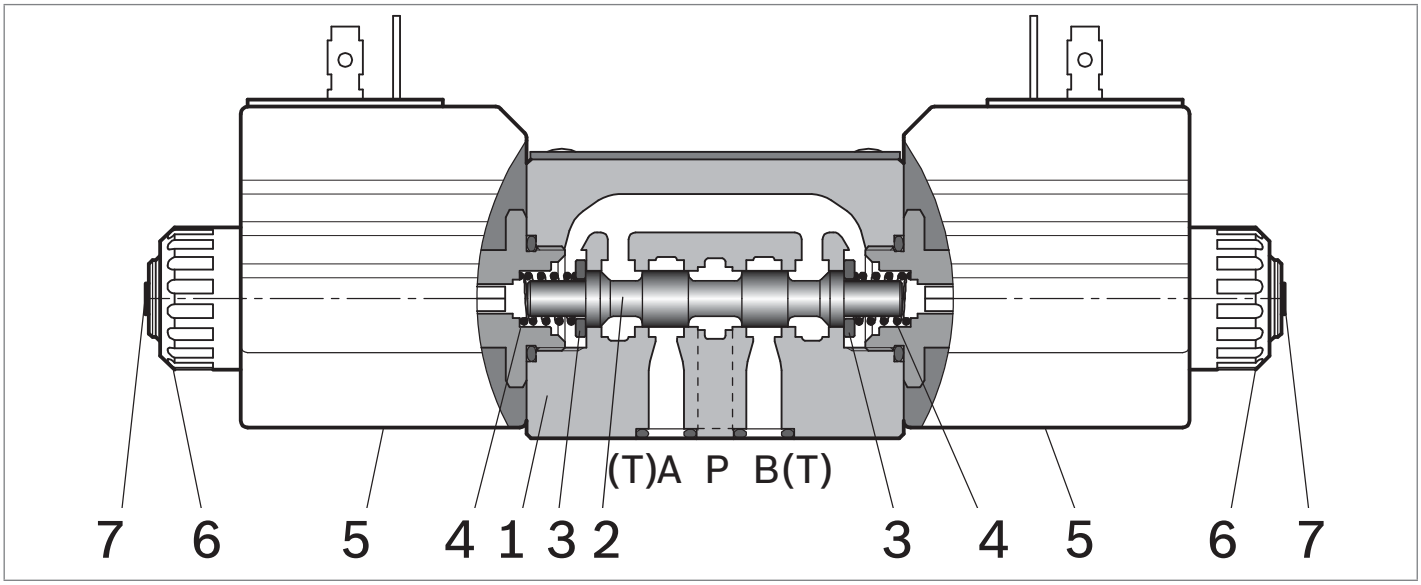
Functional description



Type L5010
The solenoid operated valves type L 5010 provide 3-way or 4-way flow control, usually from port **P** to either port **A** or **B**, and the consequent flow return to T from **B** or **A** respectively.
The valves are composed by a central cast iron body (**1**) which mounts on industry standard surfaces where the flow ports and the installation holes are located; the central body houses the precisely machined directional control spool (**2**) which is held in the neutral or initial position by the return springs (**4**). One or two solenoids, composed by a central tube and a surrounding coil (**5**), are fitted to the body at the spool's ends: when the coils are energized, their magnetic field develops a force on the oil immersed mobile plunger incorporated in the tube which pushes the control spool from the initial position into a shifted position where oil flow is allowed from **P** to either **A** or **B**.
With coils (**5**) de-energized, the control spool (**2**) returns to the central or initial position pushed by the washers (**3**) supported by the return springs (**4**).
The coils (**5**) are locked on the tube by threaded plastic nuts (**6**); the tube incorporates an externally reachable push rod (**7**) which can pushed for emergency spool shifting in case of electric failure.

Type L5010L201_, L5010M201_, L5010N201_
These valves do not have return springs (**4**) for the directional control spool (**2**): the spool can shift between two positions, driven only by the magnetic force developed by the two solenoids (**5**), and, when the solenoids are not energized, the neutral position of the spool is not defined. The directional control spool holds a specific position only when one of the solenoids is maintained energized.

Type L5010L501_, L5010M501_, L5010N501_
In these valves the directional control spool has two switched positions, each one with a mechanical detent. Shifting of the spool's position is achieved by energizing one of the solenoids, but it is unnecessary to maintain the coil energized in order to keep the spool shifted.

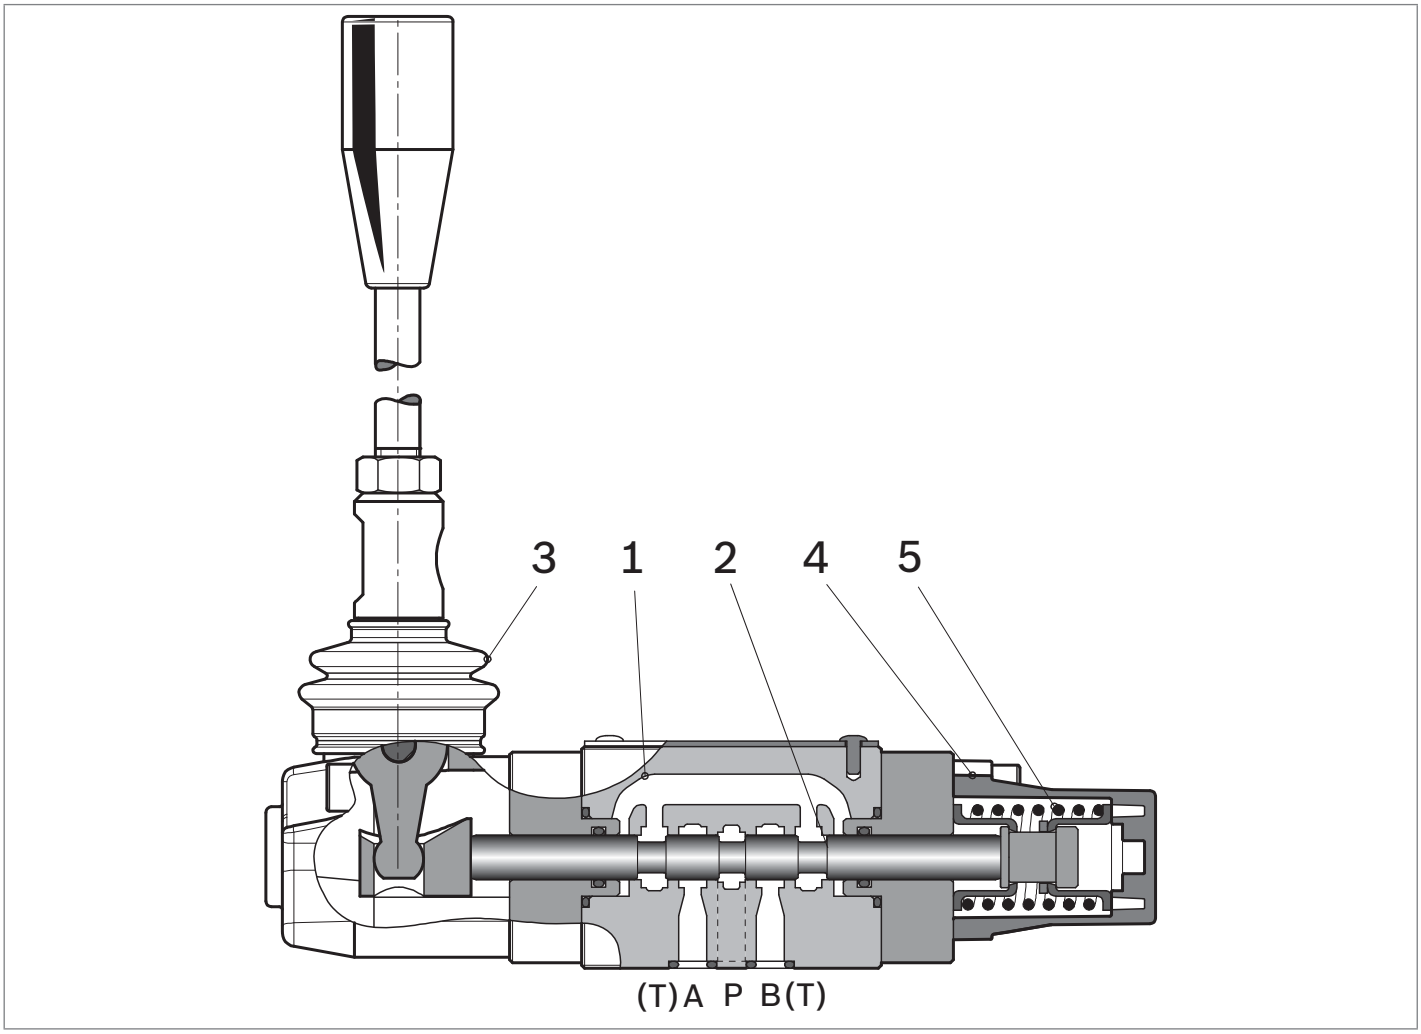
Functional description



Type L50L0
The hand lever operated valves type L 50L0 provide 3 or 4 way flow control, usually from port P to either port A or B, and the consequent flow return to T from B or A respectively.
The valves are composed by a central cast iron body (**1**) which mounts on industry standard surfaces where the flow ports and the installation holes are located; the central body houses the precisely machined directional control spool (**2**) can travel between 2 or 3 position, and which is held in the neutral or initial position by the return spring (**5**), or can be maintained in the shifted poisition by a mechanical detent.
Through the hand operated lever (**3**), the control spool can be pushed from the initial position into a shifted position where oil flow is allowed from P to either A or B.
The control spool assembly (**4**) is available also with mechanical detent which holds the spool in the shifted position: in this case the spool can be brought back into the central or initial position only by actuating the hand operated lever (**3**).

Type L50L0_201_0M100
(available with hydraulic schemes =_M__ see page 17)
These are 2 or 3 positions hand lever operated valves with control spool (**2**) normally kept in the neutral or initial position by the return spring (**5**): when the control lever (**3**) is released, the spool (**2**) returns to the central or initial position pushed by the spring force.

Type L50L0_201_0F100
(available with hydraulic schemes =_F__ see page 17)
In these valves the directional control spool (**2**) can travel between 2 or 3 positions, each one with mechanical detent: the spool (**2**) stays in any reached position also if the hand control lever (**3**) is released. The hand operated lever needs to be actuated only in order to shift the spool from one position to another one.

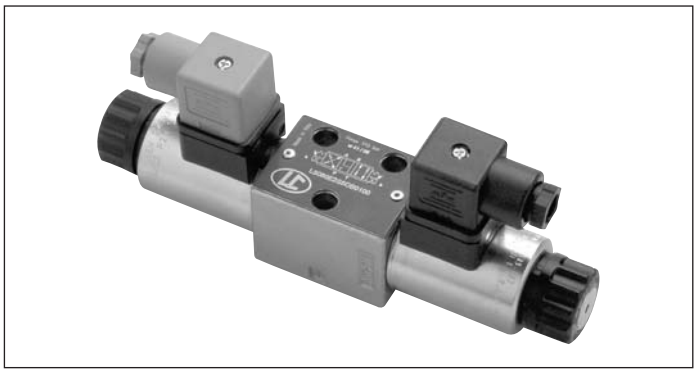
4/3 - 4/2 Proportional directional valves solenoid operated (for open loop control)

RE 18303-03
Edition: 02.2016
Replaces: 07.2012

L5080... (LC04P)



Size 4
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow 12 l/min (3.17 gpm)

General specifications

Proportional solenoid operated directional spool valve.
Actuation by proportional solenoids with a central tube and removable coil.
Spring centered control spool.
For mounting on industry standard surface port pattern to CETOP RP121 H-4.2-P02.
Wet pin DC solenoids with removable coil and manual override.
Coil can be rotated by 360°.

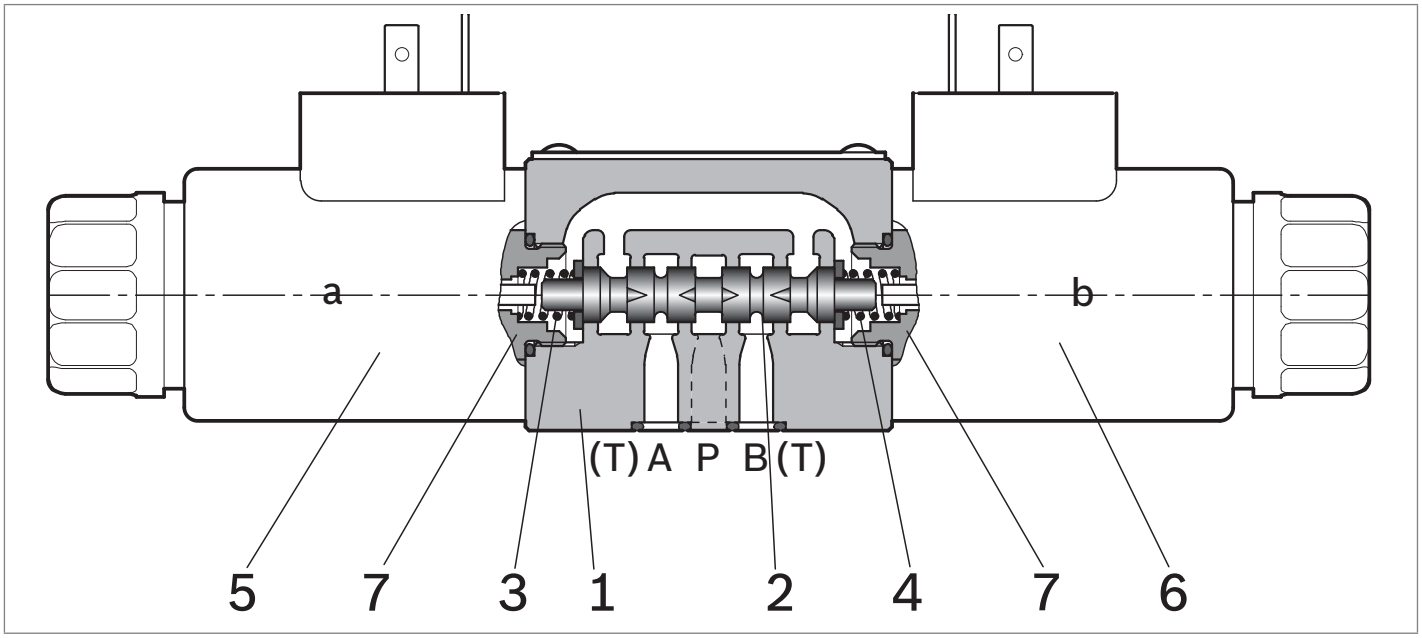
Functional description



Type L5080

The proportional valves type L5080 are designed as the solenoid operated ones; they are actuated by proportional electromagnets and the current supply to the solenoids is controlled by external electronic control system (Power Wave Modulator, or PWM). They provide 3 or 4 way flow control, usually from port P to either port A or B, and the consequent flow return to T from B or A respectively.
The valves are composed by a central cast iron body (**1**) which mounts on industry standard surfaces where the flow ports and the installation holes are located; the central body houses the precisely machined directional control spool (**2**) which is held in the neutral or initial position by the return springs (**3**) and (**4**). One or two solenoids (**5**) and (6), composed by a central tube and a surrounding coil (a) and (b), are fitted to the body at the spool's ends: when one coil is energized, the magnetic field develops a force on the oil immersed mobile plunger incorporated in the tube which pushes the control spool from the initial position into a displaced position: the spool displacement is proportional to the electric input.
Example for solenoid (**6**):
- when coil (b) is energized, the spool (**2**) travels to the left proportionally to the electric input supply then the corresponding opening area of the spool notches is achieved.
- Across the orifice-like openings, flow becomes possible from P to A, and from B to T.
- When coil (**b**) is de-energized, the force of spring (**3**) pushes the spool (**2**) back to the central position.

Type L5080.3... and L5080.4...

These valves have one solenoid, either (**a**) or (**b**), consequently the directional control spool can travel from the initial position to one side only. A blinding threaded plug (**7**) is fitted in place of the second solenoid.

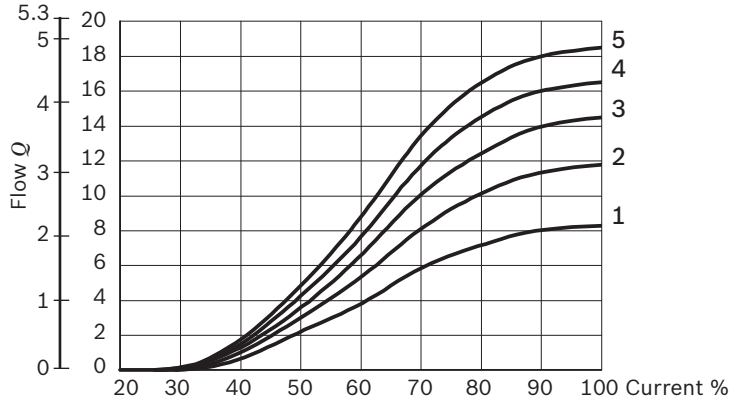
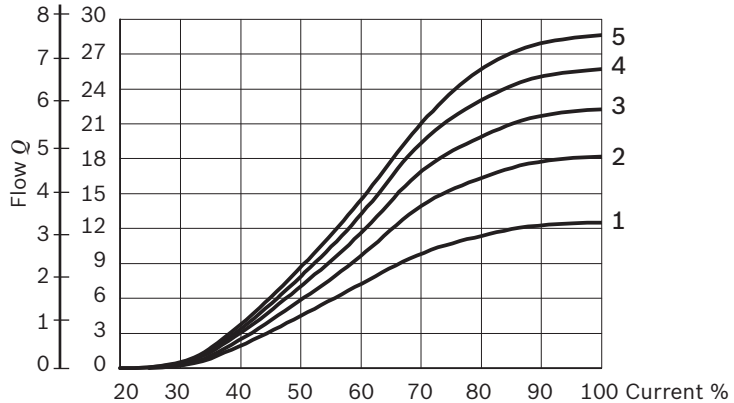
4 ΔP = 40 bar (580 psi) constant
5 ΔP = 50 bar (725 psi) constant

Ordering code S4: it supplies 8 l/min (2.11 gpm) nominal flow at 100% duty cycle, with 10 bar (145 psi) pressure drop.



1 ΔP = 10 bar (145 psi) constant
2 ΔP = 20 bar (290 psi) constant
3 ΔP = 30 bar (435 psi) constant
4 ΔP = 40 bar (580 psi) constant
5 ΔP = 50 bar (725 psi) constant

Ordering code S5: it supplies 12 l/min (3.17 gpm) nominal flow at 100% duty cycle, with 10 bar (145 psi) pressure drop.



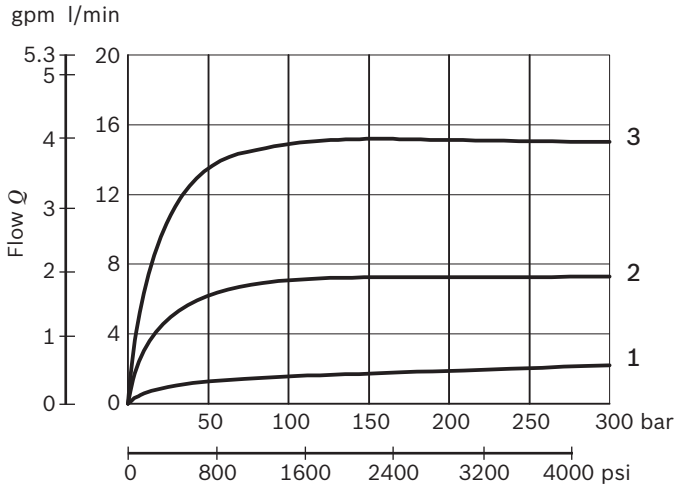
1 ΔP = 10 bar (145 psi) constant
2 ΔP = 20 bar (290 psi) constant
3 ΔP = 30 bar (435 psi) constant
4 ΔP = 40 bar (580 psi) constant
5 ΔP = 50 bar (725 psi) constant

Measured with hydraulic fluid ISO-VG32 at 45° ±5 °C (113° ±9 °F); ambient temperature 20 °C (68 °F).

Δp= valve pressure differential (inlet pressure Pp minus load Pl and minus return pressure Pt).
The characteristic curves are obtained with 4 way connected, P→A / B→T or P→B / A→T.

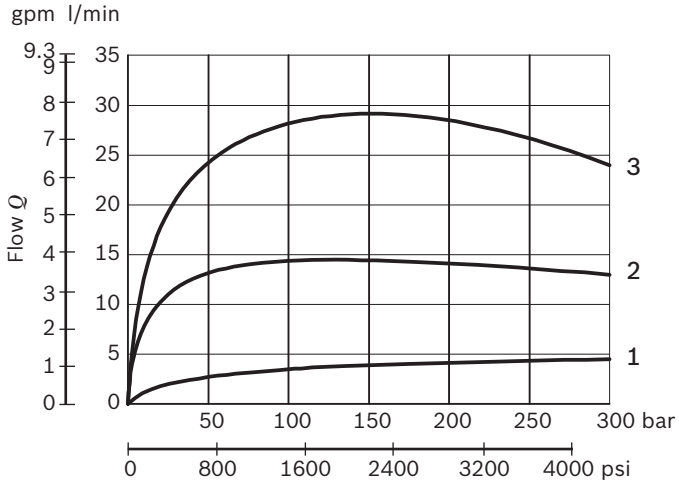
Characteristic curves

Ordering code S3



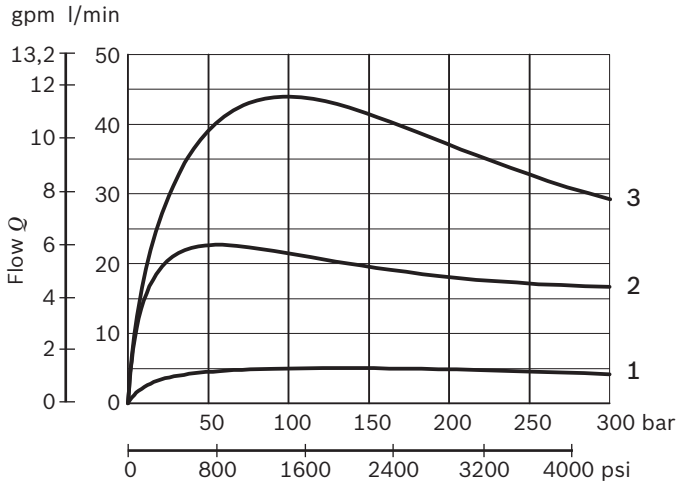
1 at 40% mean current
2 at 70% mean current
3 at 100% mean current

Ordering code S4



1 at 40% mean current
2 at 70% mean current
3 at 100% mean current

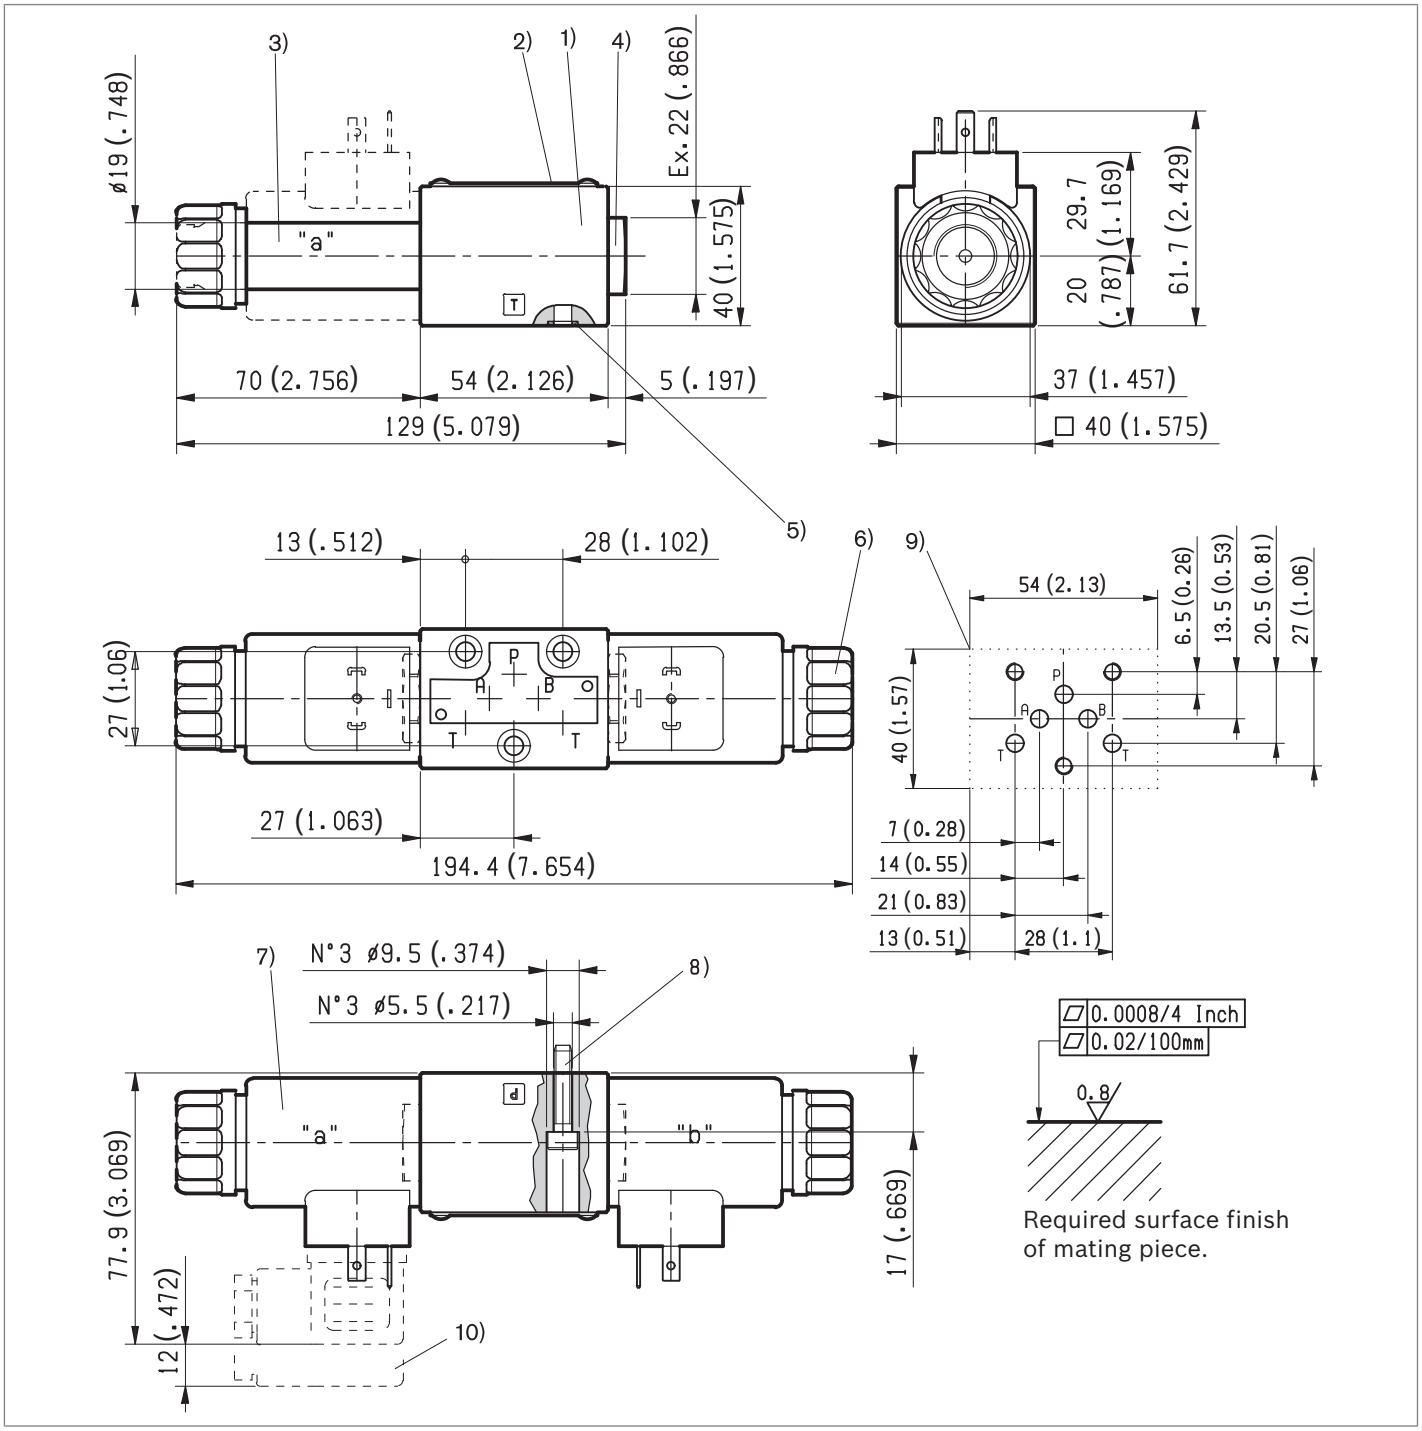
Ordering code S5



1 at 40% mean current
2 at 70% mean current
3 at 100% mean current

The performance curves are obtained with two ports connected,
P→A or P→B.

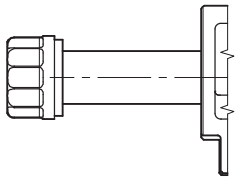
External dimensions and fittings



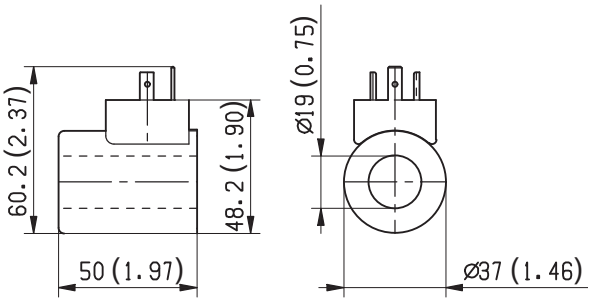
1 Valve body.
2 Identification label.
3 Proportional solenoid.
4 Blinding threaded plug, for versions L 5080.3... and L5080.4..., with 2 switched positions.
5 Seals (same O Ring) on ports A,B,P,T.
6 Threaded coil retainer nut. Torque 5÷6 Nm (3.69÷4.42 ft-lb).
7 Proportional solenoid, with coil (a).
8 Locking screws 3 pieces: ISO 4762 (UNI 5931) hexagon socket head cap screw M 5x25, recommended specific strength 8.8 class, to be ordered separately. Torque 5 ÷ 6 Nm (3.69 ÷ 4.42 ft-lb).
9 Drilling specifications of standard mounting surface according to CETOP RP 121 H-4.2-4-P02.
10 Clearance needed for connector removal.

Electric connection

00 without coil



01 Protection class: IP 65 when connector with seal is properly screwed down.



03 Protection class: IP 65 with female connector properly fitted (see drawing).

2 or 3 way pressure compensated flow regulators

L6090... (LC04M-CBL) - L6095... (LC04M-CBD)

RE 18303-04
Edition: 02.2016
Replaces: 07.2012

Size 4
Series 00
Maximum operating pressure 310 bar (4500 psi)
Maximum flow (2-way) 12 l/min (3.2 gpm)
Maximum flow (3-way) 20 l/min (5.3 gpm)

General specifications

2-way or 3-way pressure compensator valve with fixed setting.
Sandwich body with CETOP RP 121 H-4.2-4-P02 interface.
They maintain a constant, pre-established, pressure drop between ports P and A, P and B.
If employed in combination with proportional directional valves, they control the flow and maintain it constant for each spool position, regardless of working pressure.
Cast iron body.
Zinc plated external surfaces.

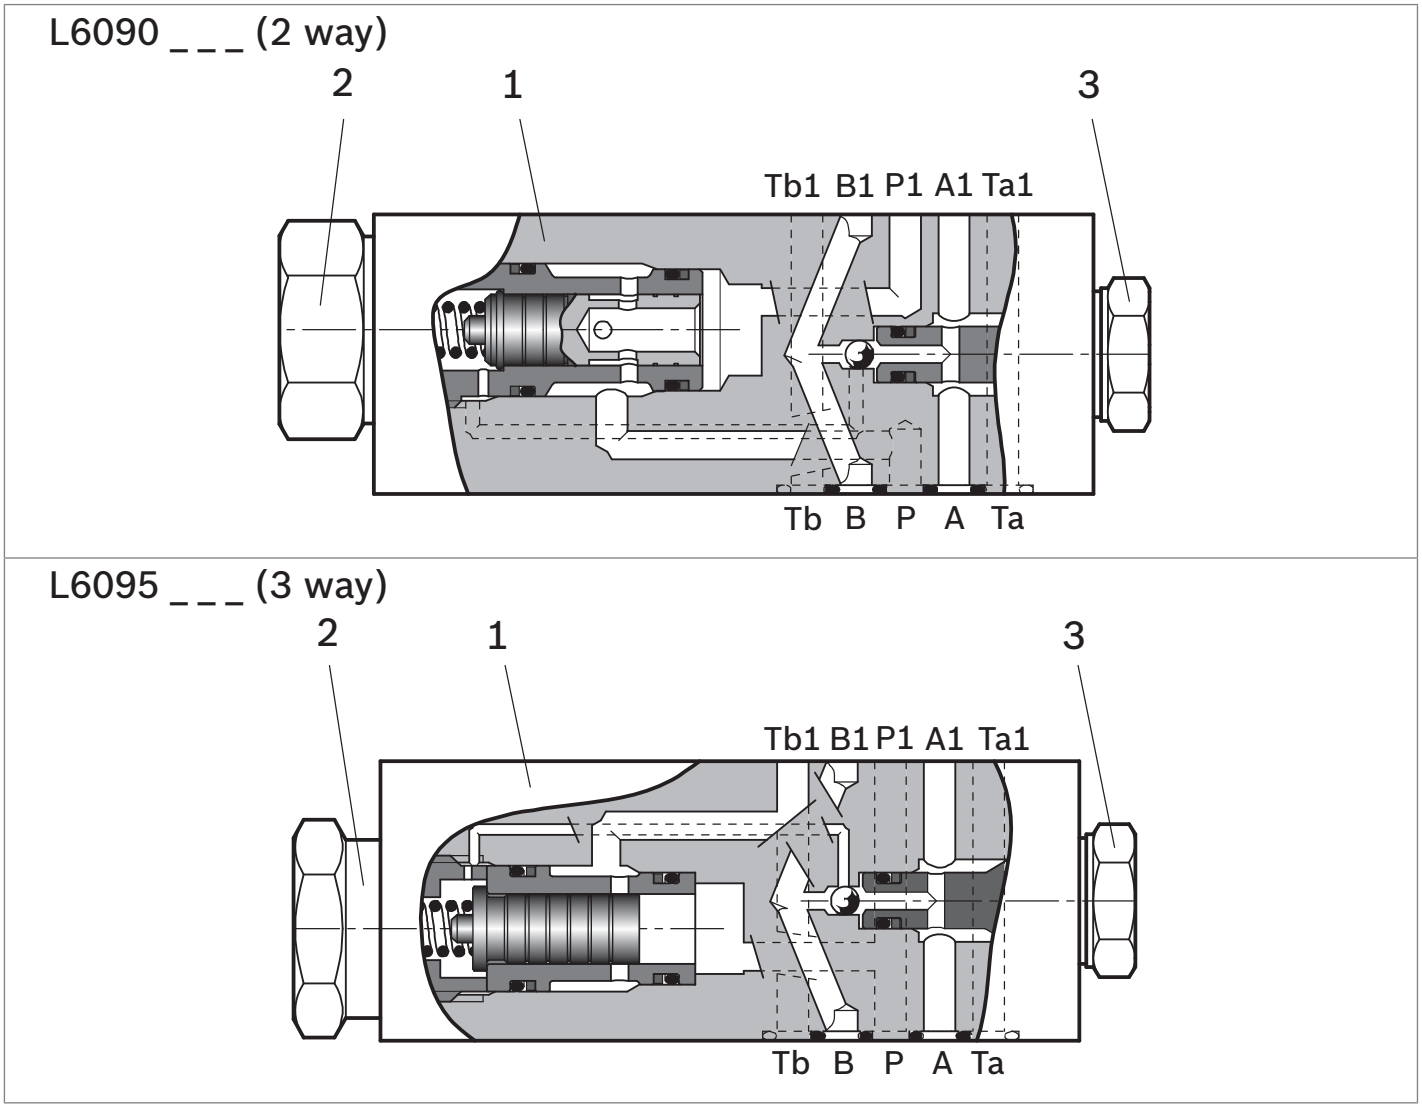
Functional description



Type L6090... and L6095...
Inside the sandwich type body (**1**) there is a 2-way or 3-way spring loaded pressure compensator which automatically adjusts its position in order to reach equilibrium and maintain a constant pressure difference between P and A (or **P** and **B**) ports. For any given spool position, the compensator modulates the opening until a constant pressure drop and a constant flow rate is established regardless of working pressure. An incorporated shuttle valve supplies the A or B pressure signal to the “spring side” of the compensator; the compensator is exposed to the inlet (**P**) pressure on one side and to the outlet (**A** or **B**) pressure, plus spring load, on the opposite side. In conclusion, the pressure difference between inlet and outlet is determined by the spring load, which is designed to remain nearly constant as the compensator moves, allowing more or less flow, until the equilibrium position is reached.

EXPLANATION OF THE DIAGRAM

known the maximum regulated flow, is possible know the maximum permissible pressure drop in the flow regulator valve (P-A or P-B) for obtain the required flow.

Example

Given: the regulated flow = 7 l/min (1.85 gpm).
Required: the maximum permissible pressure drop.
Select the value 7 on the X line within the diagram above, follow the arrows up to the value in Y line. The value found is the maximum permissible flow regulator valve's pressure drop, impossible obtain the flow request with a pressure drop upper.

Measured with hydraulic fluid ISO-VG32 at 45° ±5 °C (113° ±9 °F); ambient temperature 20 °C (68 °F).

Note
Characteristic curves are obtained with Ta and Tb connected by proportional operated directional valves

Description
Function, section (1=component side, 2=plate side)
Type L60400AB-A-B...:
Isolator valve type L6040 is a pilot operated check valve of sandwich plate design. It is used for the leak-free closure of one or of two actuator ports, even during longer periods of standstill. The oil can freely flow from A1 to A or B1 to B, where as in the opposite direction the flow is blocked.
When fluid flows through the valve from A1 to A or B1 to B, spool (1) is pressurised and therefore shifted to the right or to the left, which causes poppet (2) to be pushed off its seat. Hydraulic fluid can now flow from B to B1 or from A to A1.
To allow reliable closing of poppets (2), the actuator ports of the directional valve must be unloaded to tank in the central position (see circuit example).
Type L60400P-T...:
Valve type L6040... is a direct operated check valve of sandwich plate design. It is used for leak-free checking in one direction and allows free flow in the opposite direction. When no fluid flows through the valve, spring holds poppet in the closed position.

General Technical Data for Compact Power Module ME and MR series

Through the years DCOC has developed a highly evolved modular system resulting in powerful, flexible and cost effective power pack range, identified as **“compact power modules”**. In its easier configuration, a “compact power module” is an assembly of electric motor, central manifold with valves, pump, oil tank and a few connection elements. The central manifold, with its built-in valves, allows to achieve a large variety of hydraulic control circuits. If more complex circuits are needed, modular integrated blocks can be added by flange mounting, or interfacing, to the central manifold to extend its capabilities.

Typical applications

Passenger lift
Fork lift
Car and motorcycle lift
Lift table
Dumper
Tail gate
Scissor lift
Gangway and davits for boats
Material handling
Foods machinery

Power module selection

Choose the circuit which meets your application requirements.
Take note of all dimensions resulting from the basic components chosen for your application.

Note
dimensions may vary slightly and should be confirmed by DCOC, if the assembly is to be installed in a space with narrow clearance.

The tank capacity and the tank dimensions need to be large enough to assure proper pump suction: there must always be a reserve of oil in the tank when all cylinders are fully extended and avoid overflow when cylinders are fully retracted.
The tank must be evaluated also for best separation of air from oil, and for settling down oil contamination. It should be placed in a space with, at least, natural ventilation and it should permit enough heat dissipation to prevent high fluid temperature.
Select the electric motor by evaluating the power needed and the motor compliance with the heat developed during the expected run time (or “duty cycle”).

Hydraulic fluid for compact power module

Mineral oil based hydraulic fluids suitable for hydraulic systems can be used; they should have physical lubricating and chemical properties as specified by:

MINERAL OIL BASED HYDRAULIC FLUIDS HL
(DIN 51524 part 1)
MINERAL OIL BASED HYDRAULIC FLUIDS HL P
(DIN 51524 part 2)

For use of environmentally friendly fluids please consult DCOC.

Fluid viscosity, temperature range of the operating fluid, ambient temperature

The fluid viscosity should remain within the range 10 to 300 cSt (centistokes); recommended 15 to 120 cSt.
Permissive cold start viscosity is maximum 2000 cSt.
The fluid temperature should remain within the range -15°C and 80°C (5°F and 176°F).

Note
For compact power module with plastic tank the fluid temperature should remain within the range -15°C and 70°C (5°F and 158°F).
Ambient temperature -15°C +40°C (5°F and 104°F).

Fluid cleanliness requirements and maintenance

We recommend a cleanliness of the operating fluid according to ISO 4406 Class 20/18/15 or cleaner.
All components of the hydraulic circuit , including hoses and actuators, must be flushed and cleaned before assembling, because the compact power module has a suction filter only.
The hydraulic fluid should be replaced after the first 50 hours, and then every 1000 hours, or, at least, once a year.

Power module installation

The mounting position (is basically un-restricted; just avoid installations that could compromise the pump suction, it is recommended to support the power module on vibration dampening blocks when the mounting structure is expected to vibrate.

Wiring and starting-up

The wiring between battery and electric motor should be selected in order to avoid excessive voltage drop (recommended less than 1 V).
It is strictly forbidden to allow the backwards rotation of the pump even at the first starting: to prevent reverse

rotation, the wiring polarities must be correctly connected (except for the reversible pumps).
Caution: when energized, the surface temperature of the electric motor could reach temperature levels of 60-80°C (140-176°F): care should be taken to avoid any accidental contact of people with the motor surface.

A.C. motors
The tolerances on the nominal voltage are:
Single phase motor: 230V +/-5% -
Three phase motor: 230-400V +/-10%.
Protection degree : IP54 (protection against dust and water splash).
Insulation class: F (155°C) (311°F).
All motors are aluminum alloy die cast without painting.

D.C. Motors
DCOC has a wide range of D.C. motors. In the following pages you will find a selection of our standard range.
For further information about our complete range please contact our Sales department.
Some motors Ø80 have reversible rotation (see the table) and are suitable for application in CPM MR series.
All the others motors shown have clockwise rotation suitable for driving our counter clockwise gear pumps.
For each motor a diagram is shown that enables the customer to select the right pump displacement needed for the required flow and working pressure.
To be sure of selecting the best electric motor for the application, also the duty cycle has to be verified.
Following are the definitions of the type of duty cycles:
S2 = Short time duty cycle: indicate the number of minutes the motor can operate before reaching the maximum allowable temperature. After this time the motor must cool down until the ambient temperature is reached.
S3 = Intermittent duty cycle: indicate the maximum time percentage (%) based on 10 minute period within the motor can run until reaching the maximum allowable temperature. For example an S3 value of 15% = 1,5 minutes running time every 10 minutes period. For 8,5 minutes the motor is switched-off.
The S2 and S3 values are related to the current draw. On the label of motor are indicated the S2 and S3 values referred to the nominal power of the motor.
To check the S2 or S3 value at different conditions is necessary to find the value of current in the motor-pumps diagram and related it with the represented list.
All the diagrams motor-pumps are obtained at the nominal voltage of 12 or 24 Volt using fluid ISO VG 46 at 20-30°C (68-86°F).

Central manifolds
All the Central Manifolds shown in the catalogue are made in die cast aluminium alloy except the manifold code 10 for CPM MR series that is made by extruded bar. The validation of the Central Manifolds follows a life-test with 250 bar (625 psi) pulsed pressure repeated for 300.000 cycles.

Built-in valves
A wide range of cartridge valves and special plugs is available to be assembled in our Central Manifolds. The cartridge valves shown are designed for use in our Compact Power Module and are manufactured using steel with high mechanical strength. Surface treatments protect the exposed parts to the external environment. Standard seals are NBR (BUNA-N) with backup rings in PTFE. The cartridge valves with “leak proof seat design” have an average leakage of 10-15 drops/minute (< 1 cm^3/minute 0.06 in^3/min.) at the maximum pressure using fluid ISO VG46 at 40°C (104°F).
The validation of the cartridge valves follows a life-test at pulsed maximum pressure (indicated for each valve) repeated for 500.000 cycles.
All the solenoid cartridge valves are fitted with protective O-Rings installed between the pole tube and the coil. These O-Rings protect the internal parts from condensation and contaminants , which could cause malfunction.
All the solenoid cartridge valves except the 2/2 VE1 series are designed for operating in D.C..
Power supply in A.C. requires a connector with bridge rectifier included. All the data in the solenoid cartridge valves data sheet are obtained with stabilized coil operating temperature and voltage at -10% of the nominal value.

External gear pumps
DCOC offers a wide range of External Gear Pumps to cover different kind of applications. The standard version are suitable for the biggest part of applications. All the pumps are pressure compensated to guarantee the best efficiency.

Oil tanks
In this catalogue you will find a wide selection of steel and plastic tanks available as a standard product. If a special tank is required please contact our Sales Department. Steel tanks have Black paint finish and are suitable for operating temperature range -15°C / +80°C (5°F / 176°F). Plastic tanks are obtained in one piece in order to avoid welded parts that are weak points at extreme temperature and vibrations. Plastic tanks are suitable for operating temperature range -15°C / +70°C (5°F / 158°F).

Note
even if the plastic tank mounting system is designed to avoid oil leakage the tank must be securely anchored when fitted in mobile equipment and when subject to shocks and heavy vibrations. Please check that the anchorages do not stress or deform the tank.

Modular stackable elements
Our modular system offers a wide range of standardised elements. They are divided in two main series:
Modular Elements “N” series: Modular blocks for different mounting position with mechanical valve or interface for CETOP valves to create parallel or series circuits.
Modular Elements “V” series: Modular blocks that incorporate solenoid operated cartridge valves 2,3,4 way.
All the Modular Elements are made in extruded aluminum alloy AL 2011 (AlCu5.5Pb0.4Bi0.4 UNI 9002/5). In the catalogue you will find a selection of the main used models.
Note: To reduce the complexity of the system and optimize the available space, special Modular Elements can be designed and manufactured following the customers needs. In this case please contact our Sales Department.

European machine directive 2006/42/CE
According to the Machine Directive2006/42/CE, a complete power module, as described in paragraph 15 and made available to the European market, enters into the definition of “partly completed machinery”.
Instead, the power module sub-assemblies (motor, pump, reservoir, central manifold,...), when not assembled into a complete power pack, are considered “components” which can be employed in a “machinery” or a “partly completed machinery”. In this case, the DCOC components and sub-assemblies must be fitted in compliance with all the relevant technical data sheet applicable to the product, and shall not be operated, adjusted or disassembled before the complete machinery where they are incorporated has been declared to be in compliance with the Machine Directive 2006/42/CE.

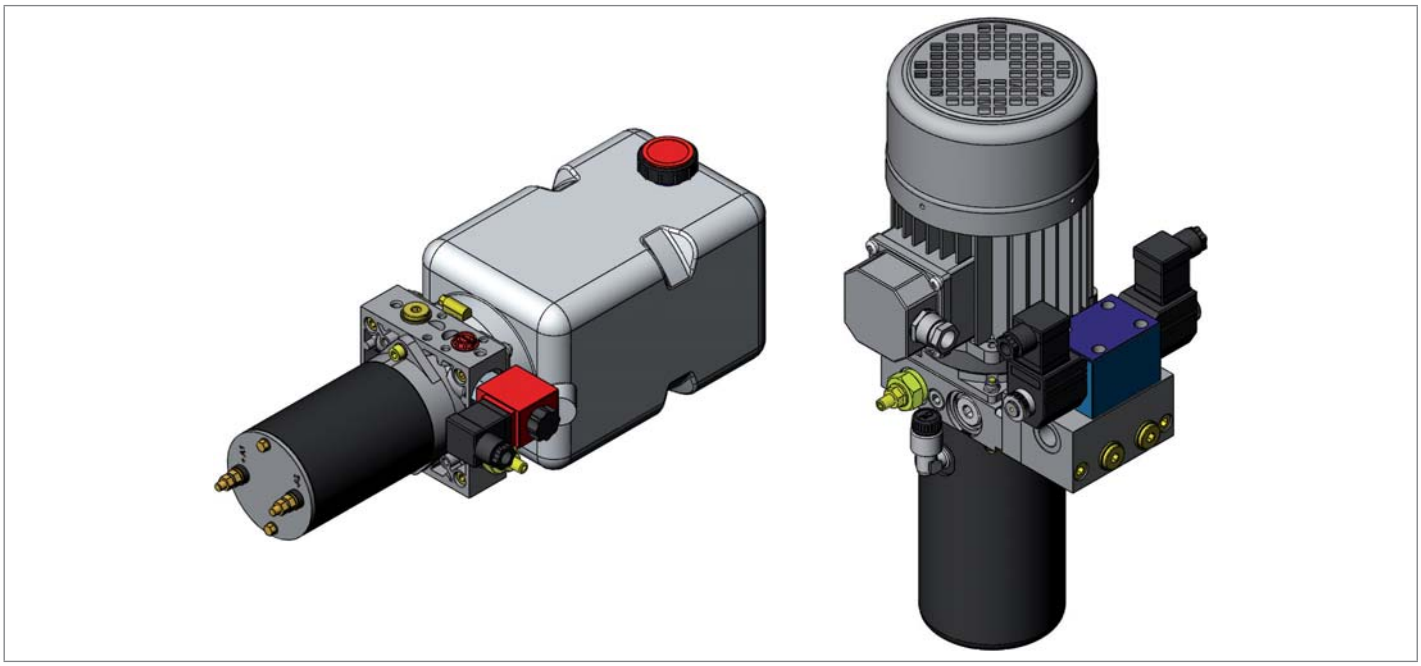
Note
All the components shown in the catalogue ARE NOT suitable for use in potentially explosive atmosphere.

Technical information
Below you will find the most common equations used in hydraulics:

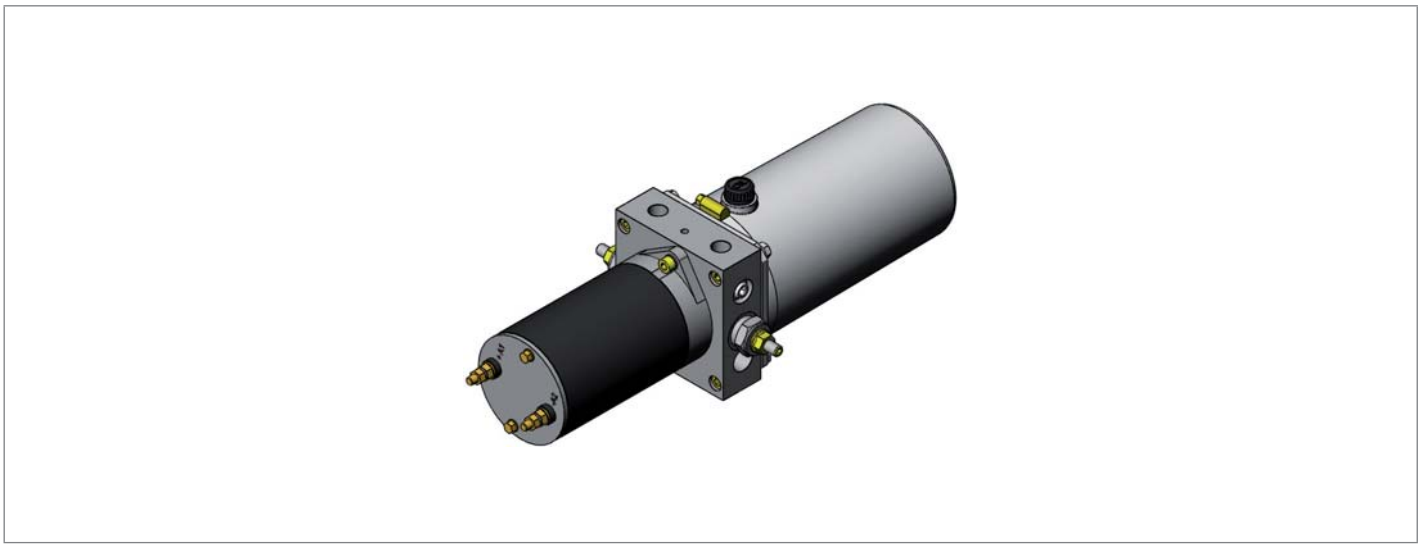
	Common Units	Symbols	Equations
Flow	l/min	Q	$Q = \frac{D \times n}{1000} \times 0{,}95$
Operating pressure	bar	P	$P = \frac{F}{0{,}1 \times A}$
Internal diameter hydraulic cylinder	mm	d	–
Area of hydraulic cylinder	mm^2	A	$A = \frac{\Pi \times d^2}{4}$
Piston force	N	F	–
Drive shaft	rev/min	n	–
Power requirement for motor	kW	N	$N = \frac{P \times Q}{612}$
Pump displacement	cm^3/rev	D	–
Torque requirement	Nm	M	$M = \frac{D \times P}{62{,}8 \times 0{,}87}$

Compact Power Module Type

ME
Smallest overall dimensions.
DC motors up to 2200 W (2,95 hp).
AC motors up to 1100 W (1,48 hp).
Pump displacement up to 1,5 cm3 (0,09 inch3).
Pressure up to 250 bar (3626 psi).



Reversible Type **MR series**
Smallest overall dimensions.
DC motors up to 800 W (1,1 hp).
AC motors up to 750 W (1,0 hp).
Pump displacement up to 1,5 cm3 (0,09 inch3).
Pressure up to 250 bar (3626 psi).



A.C. Electric Motor Standard Flange

Standard A.C. Motors in B14 form.

Note

The electric motors with standard flange shown in this pages are delivered by different certified suppliers.
This means the indicated dimensions could change a little, depending on which manufacturer will be assembled.
On the CPM the choice of the manufacturer is based on our stock availability.

Manifold Hydraulic Diagram

10

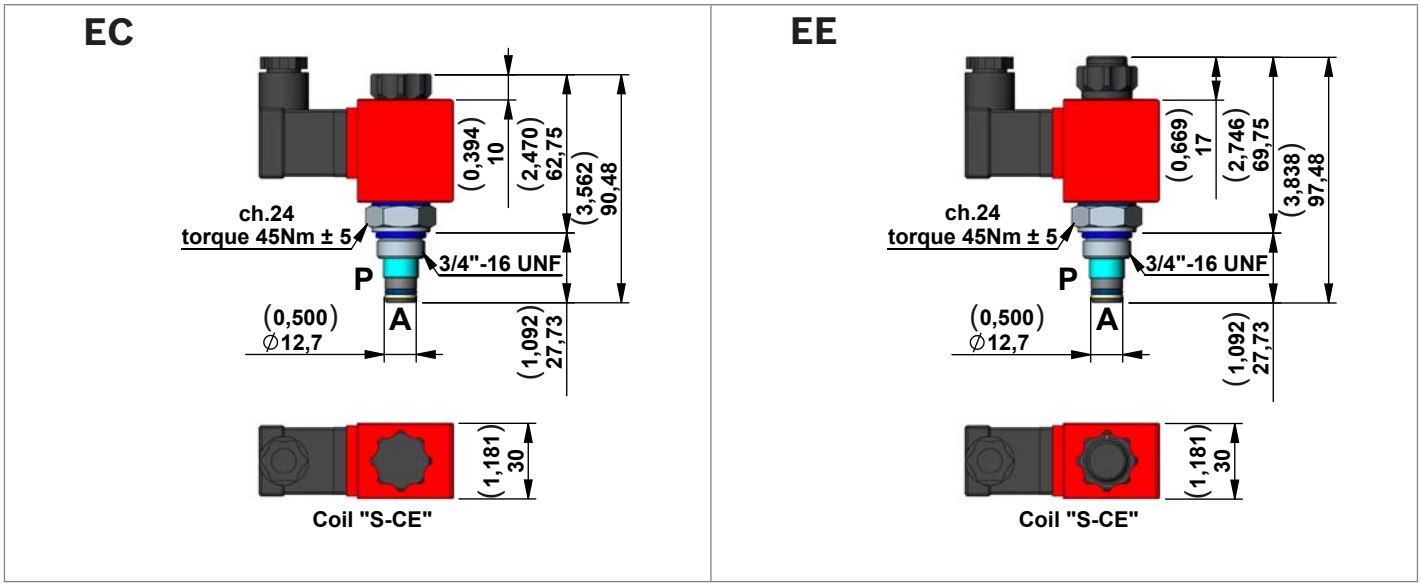
Manifold Code with Relief Valve Pressure Range	Presure Range bar (psi)	Type	Material Number
A10/05	10-55 (145-798)	810A000A	R930053852
A10/10	35-100 (508-1450)	810B000A	R930053853
A10/20	90-250 (1305-3626)	810C000	R932009780

Note
In this central manifold use only reversible pump “R” series.

Note
In the central manifold MR series is possible connect only the following motors:
DC motor code: C67 - C94 - C177 - C178 - C179 - C180 - C181 - C182
AC motor from size IEC56 to size IEC71.

Built-in Valve

VE3-NC Series



2 Way Pilot Operated Solenoid Valves, Normally Closed for D.C. current

Code	Type	Material Number
EC	K01V389671A20	R932009180
EE	K01V389671E20	R932009181

Description

This is a standard 2 way pilot operated valves poppet style.

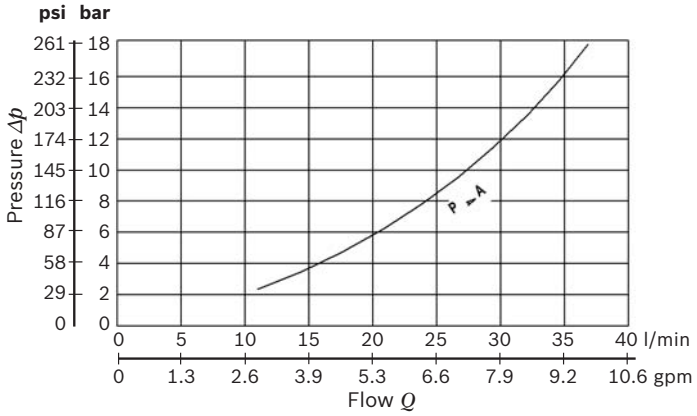
- **Only for D.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Screen on P 300 Micron.
- Screw Type Emergency on EE.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	**Energized**
EC		P ○ A	P <-> A
EE		P ○ A	P <-> A

Technical Data

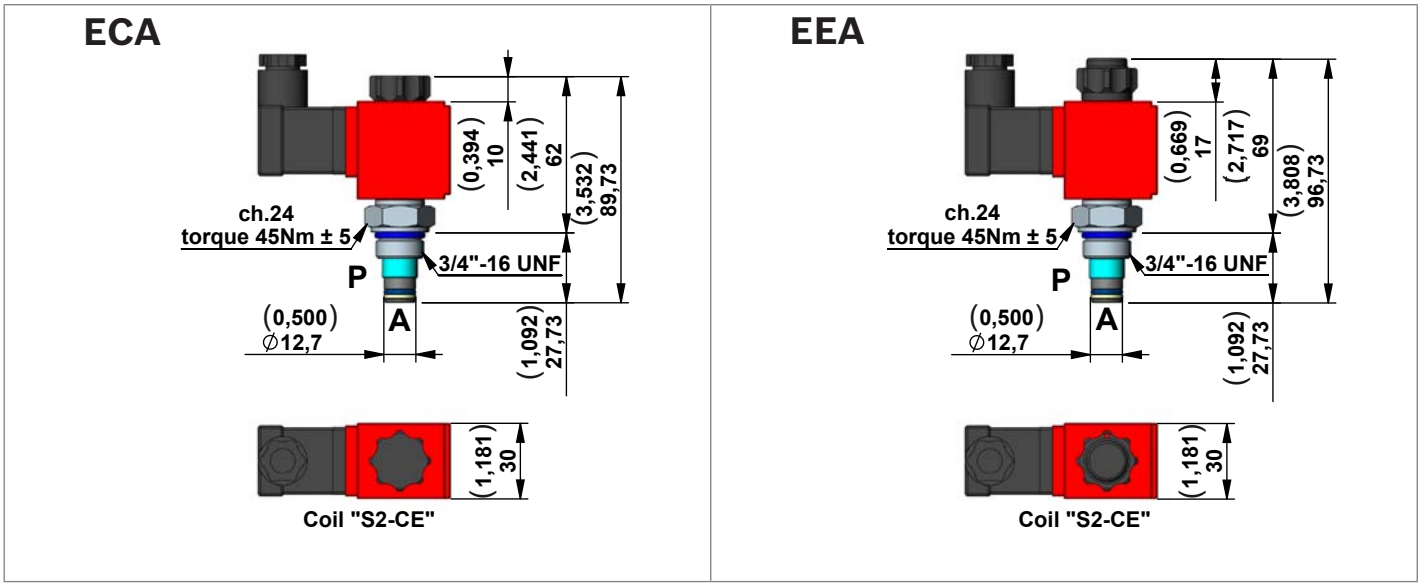
General		
Operating time	ms	Opening 30-40
		Closing 60-85
Max. working pressure	bar (psi)	350 (5076)
Max. flow	l/min (gpm)	30 (7,92)



S-CE Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

VE1-NC Series



2 Way Pilot Operated Solenoid Valves, Normally Closed for A.C. current

Code	Type	Material Number
ECA	K01V389669A20	R932009182
EEA	K01V389669E20	R932009183

Description

This is a standard 2 way pilot operated valves poppet style.

- **Only for A.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Screen on P 300 Micron.
- Screw Type Emergency on EEA.

COIL Model S-CE – 18W – ED 100%

for valves VE3-NC, VE3-NA, V4DS-2P, V4DS-3P Series

Coil protection: Polyamide resin with fiber glass for Heat insulation class F (155°C (311°F)) IXEF for Heat insulation class H (180°C (356°F)).

Solenoids “S-CE” (18 W) are designed for continuos duty ED100%.

Ambient temperature range: -15°/+40°

Inlet voltage fluctuations must not exceed +/- 10% of nominal voltage to obtain correct operations and long life coils

Protection degree: see tables below

DIN 43650 - ISO 4400 IP65 with connector assembled

Technical Data for Steel Tanks

Temperature range	°C (°F)	-15....+80 (5....176)
Materials		Steel
Colors		Black paint finish
Seal		For all the steel tanks with Ø99 is necessary to use O-Ring 4350 (Ø88,5x3,53) on the central manifold. Code:110201875000000 - Material-Number:R932000191. If is necessary to use a tank designed for KE-K (Ø123mm) must use the O-ring 4350 on the manifold and add the flange S81.

Collar for Tanks

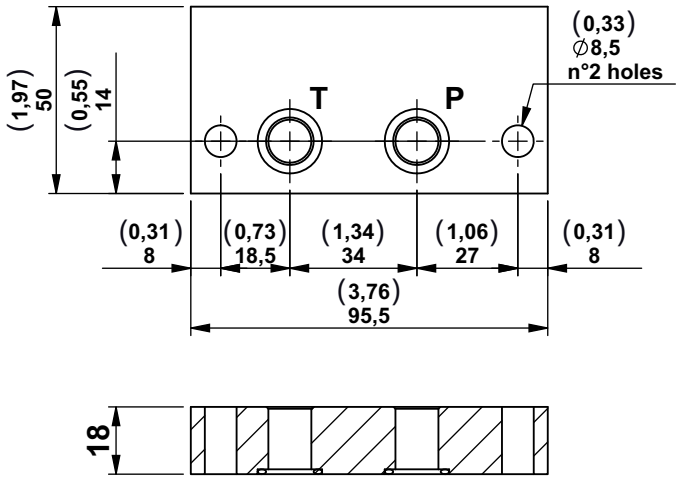
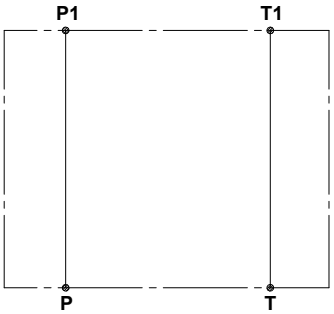
Modular Stackable Elements

Space Modular Block

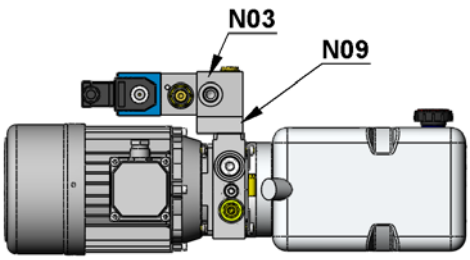




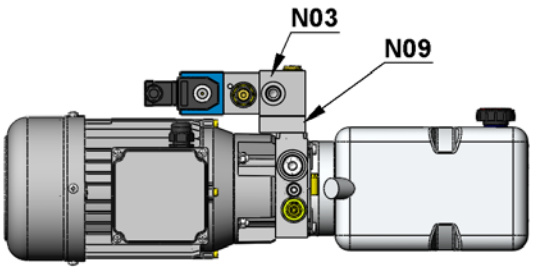
These modular blocks have been designed to have the ability to be assembled as a stack to allow clearence between flanges and motors of different sizes and types. Each block includes 2 OR 3056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N09	Space modular block	300 (4351)	40 (10,57)	G386010000	R932001058

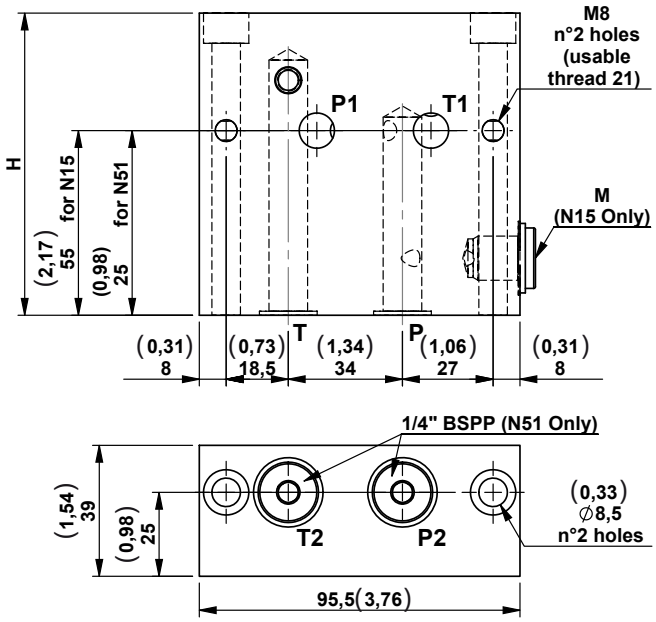
Motor IEC71 frame Coupling F90

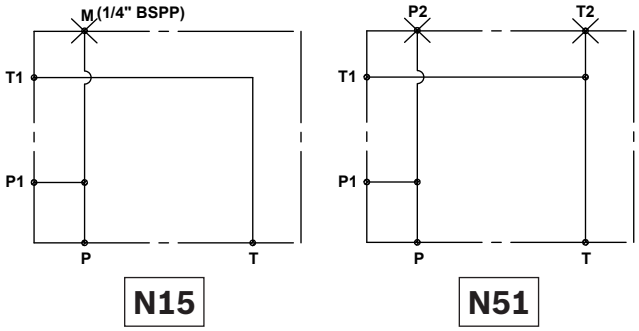


Motor IEC80 frame Coupling F95



90° modular block allowing horizontal mounting (motor side)

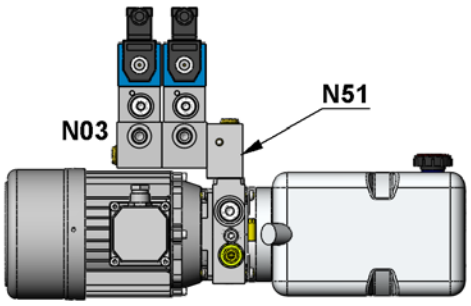




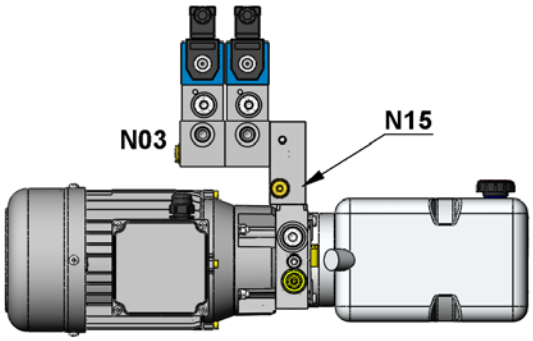
A modular block that is able to turn the standard assembling of 90°, in order to place other manifold blocks over the motor.
The “N15” block has a 1/4” BSPP port for Pressure Gauge.
Each block includes 2 OR 2056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N15	90° modular block allowing horizontal mounting (motor side) **H=90**	300 (4351)	35 (9,25)	G386014000	R932001087
N51	90° modular block allowing horizontal mounting (motor side) **H=60**	300 (4351)	35 (9,25)	G386050000	R932001146

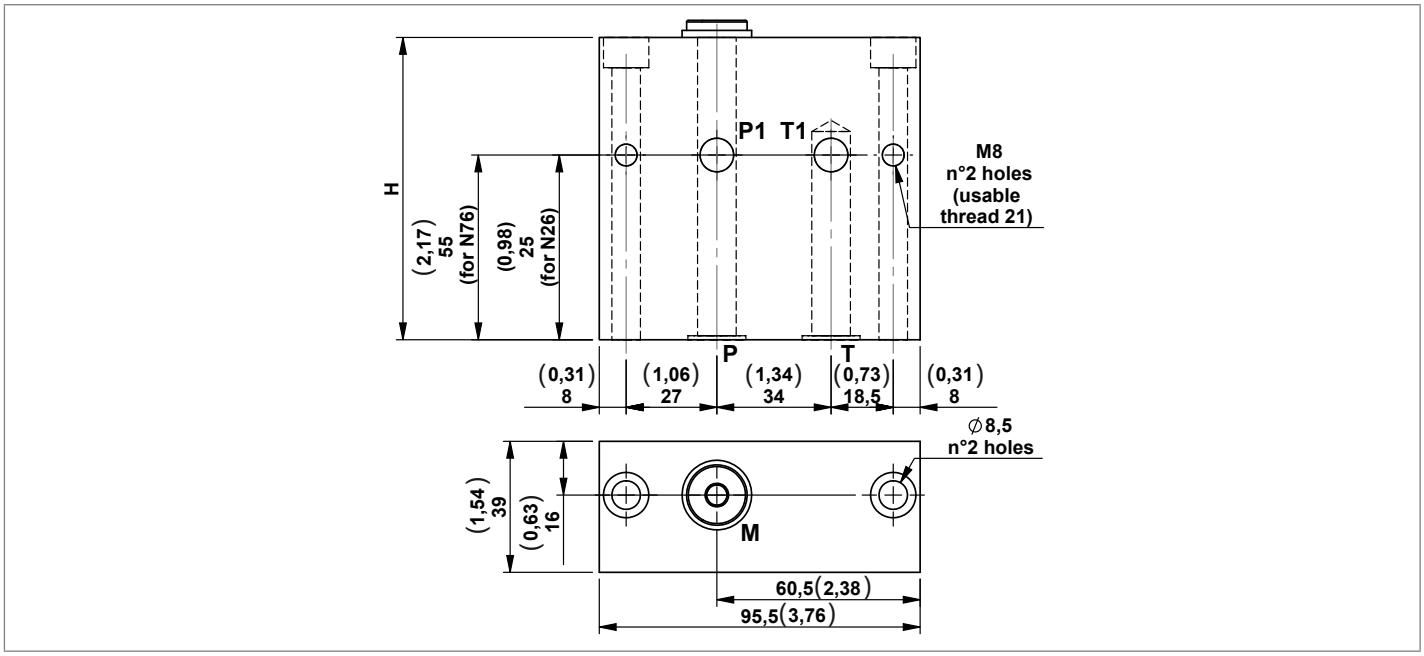
Motor IEC71 frame Coupling F90

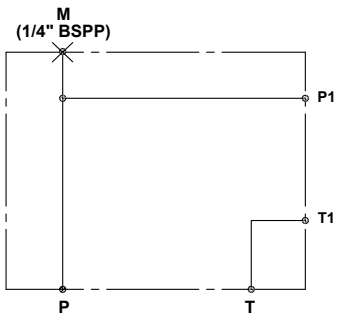


Motor IEC80 frame Coupling F95



90° modular block allowing horizontal mounting (tank side)

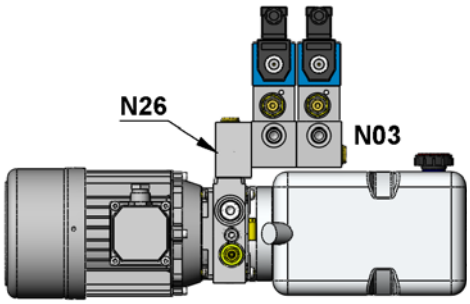




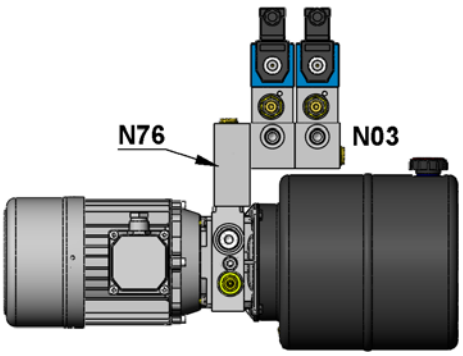
A modular block that is able to turn the standard assembling of 90°, in order to place other blocks over the tank.
The blocks have a 1/4” BSPP port for Pressure Gauge.
Each block includes 2 OR 2056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N76	90° modular block allowing horizontal mounting (tank side) **H=90**	300 (4351)	35 (9,25)	G386075000	R932001153
N26	90° modular block allowing horizontal mounting (tank side) **H=60**	300 (4351)	35 (9,25)	G386025000	R932001100

Tank H=134



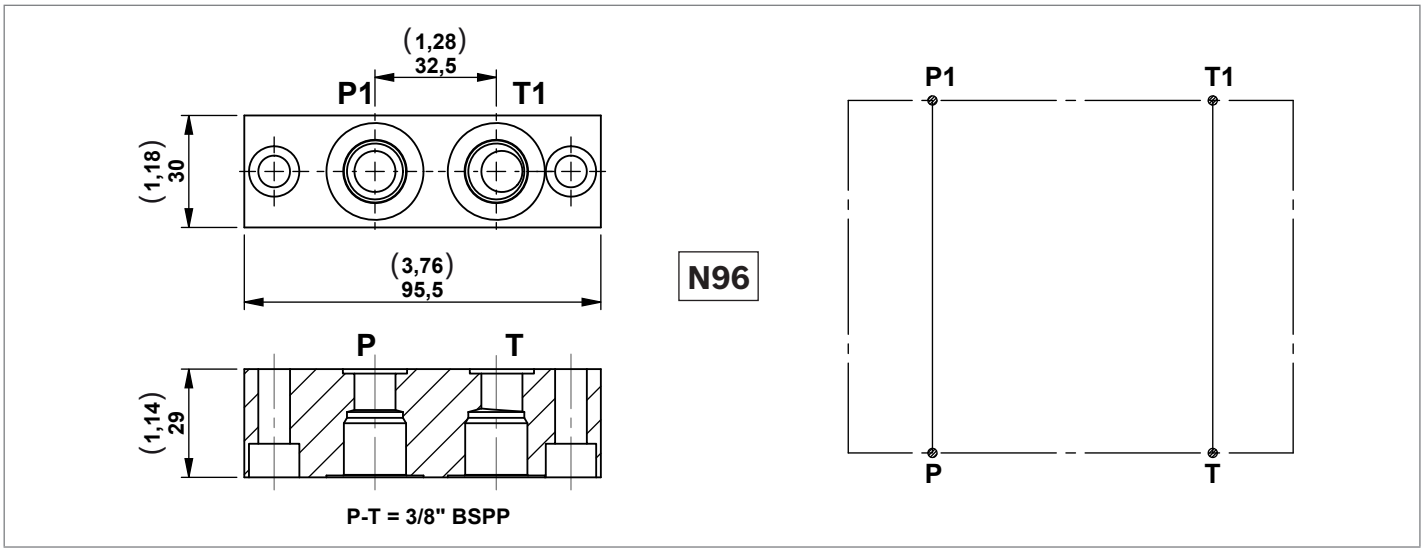
Tank Diameter Ø190

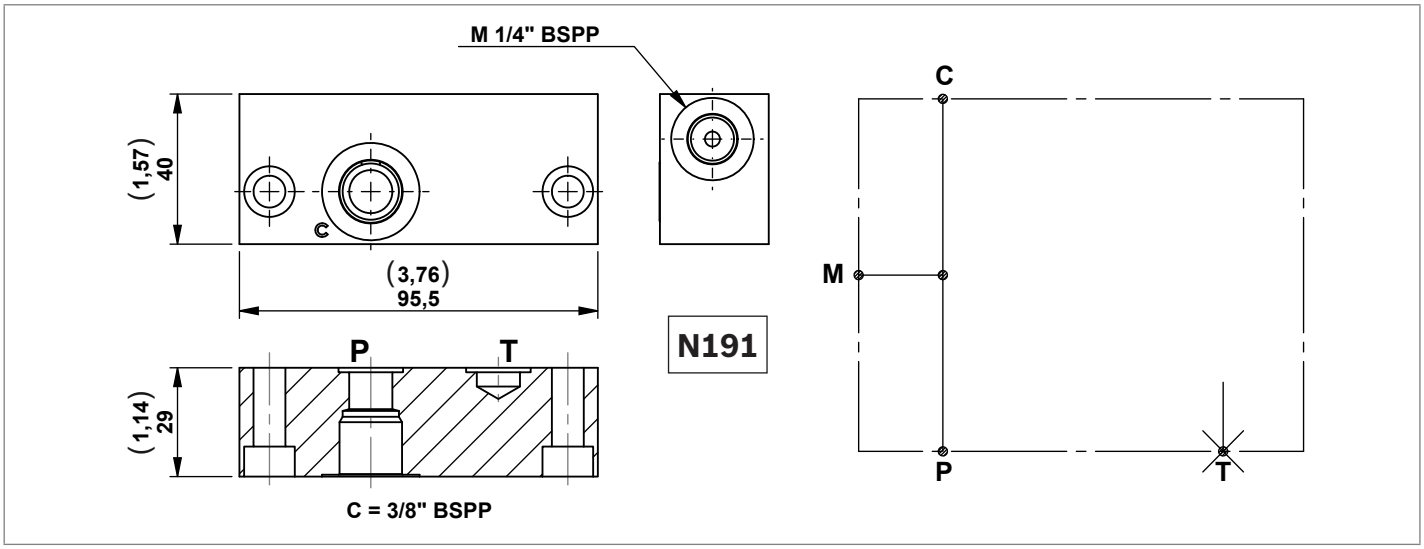


Modular blocks with threaded ports

Modular blocks with exit 3/8” BSPP.

Each block includes 2 OR 2056 gaskets.



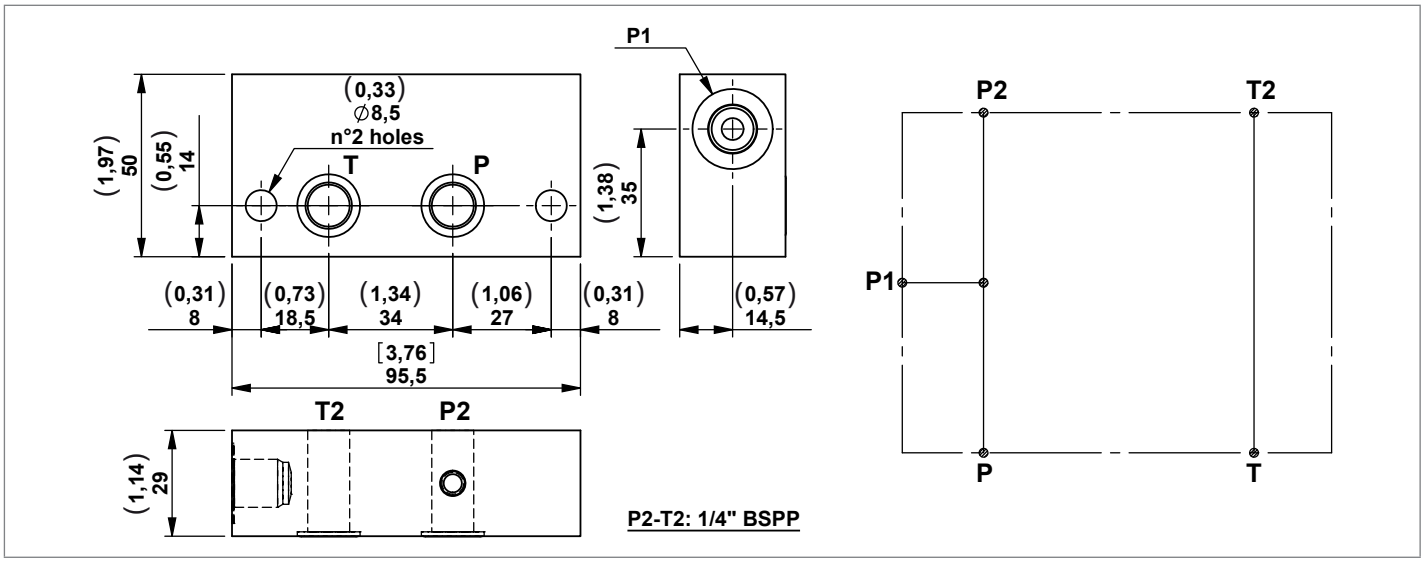


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N96	Modular block with threaded ports	300 (4351)	35 (9,25)	G386095000	R932001173
N191	Modular block with threaded ports	300 (4351)	35 (9,25)	G386191000	R932001284

Modular spacer block with extra “P1” port

A modular block with an extra port.

Each block includes 2 OR 2056 gaskets.

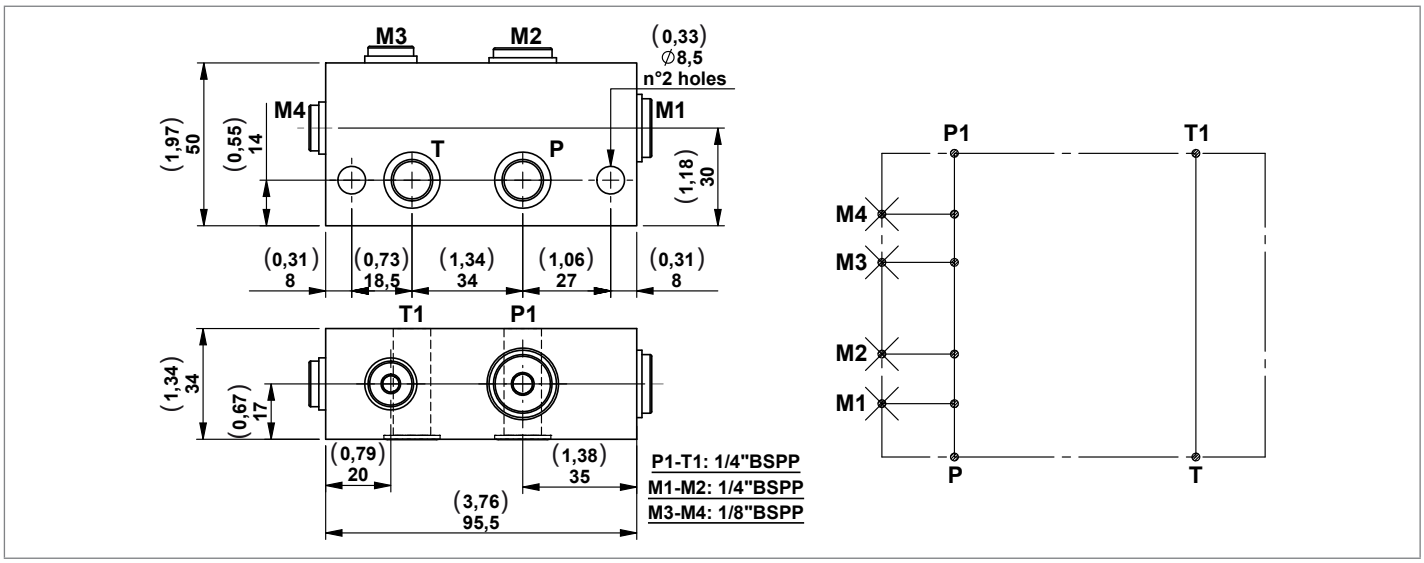


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N46-14	Modular spacer block with extra "P1" **port 1/4"** BSPP	300 (4351)	20 (5,28)	G386045000	R932001142
N46-38	Modular spacer block with extra "P1" **port 3/8"** BSPP	300 (4351)	20 (5,28)	1386000053	R932009506

Modular spacer block with two 1/8” BSPP and two 1/4” BSPP ports

A modular block with 4 extra ports.

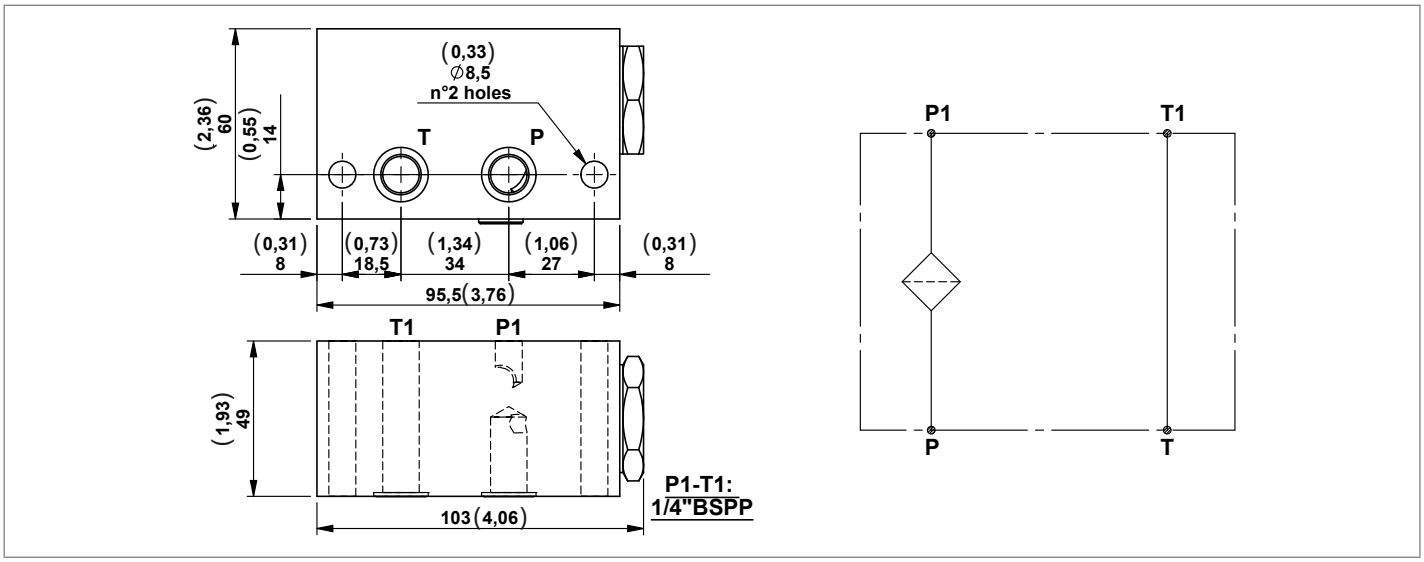
Each block includes 2 OR 2056 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N128	Modular spacer plock with two 1/8" BSPP ports and two 1/4" BSPP ports	300 (4351)	35 (9,25)	G386128000	R932001241

Modular block with filter on pressure line

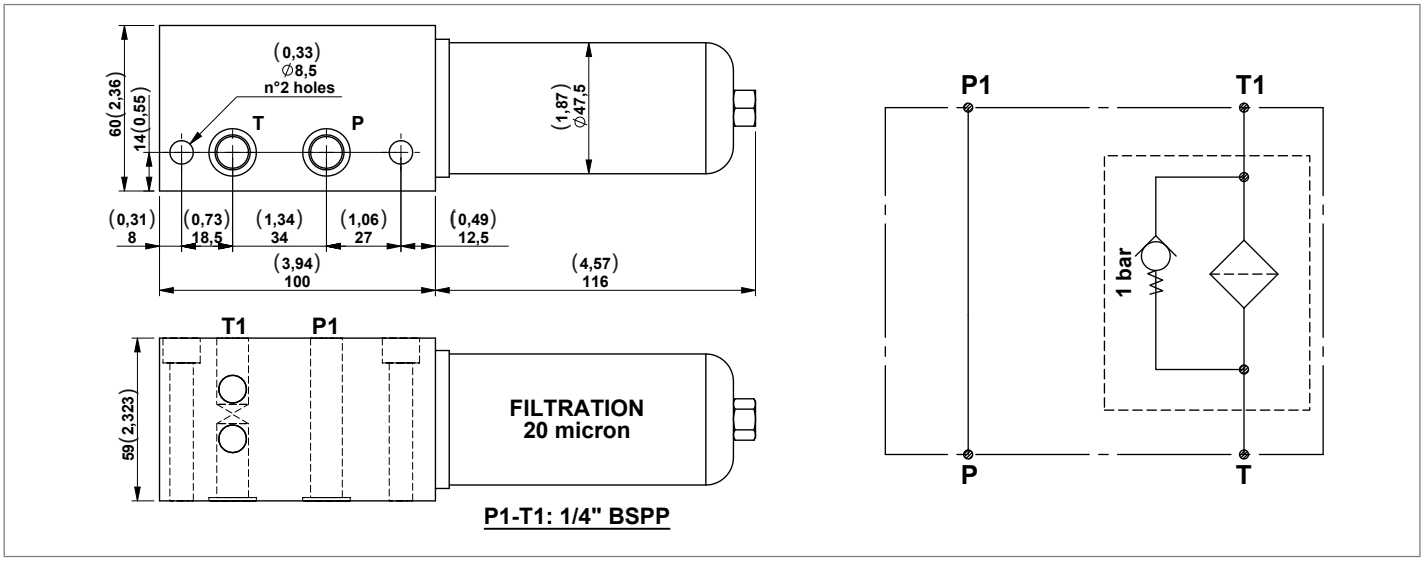
A modular block with a filter on the pressure line. This is recommended for applications where valve may be subjected to contamination.
Each block includes 2 OR 2056 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N39-25	Modular block with filter (**25 micron**) on pressure line	230 (3336)	10 (2,64)	G386038010	R932001123
N39-60	Modular block with filter (**60 micron**) on pressure line	230 (3336)	10 (2,64)	G386038020	R932001124

Modular block with filter on the return line

A modular block with filter on return line. This is recommended for applications where valves may be subjected to contamination.
Each block includes 2 OR 2056 gaskets.
By-pass valve set at a pressure of 1 bar.

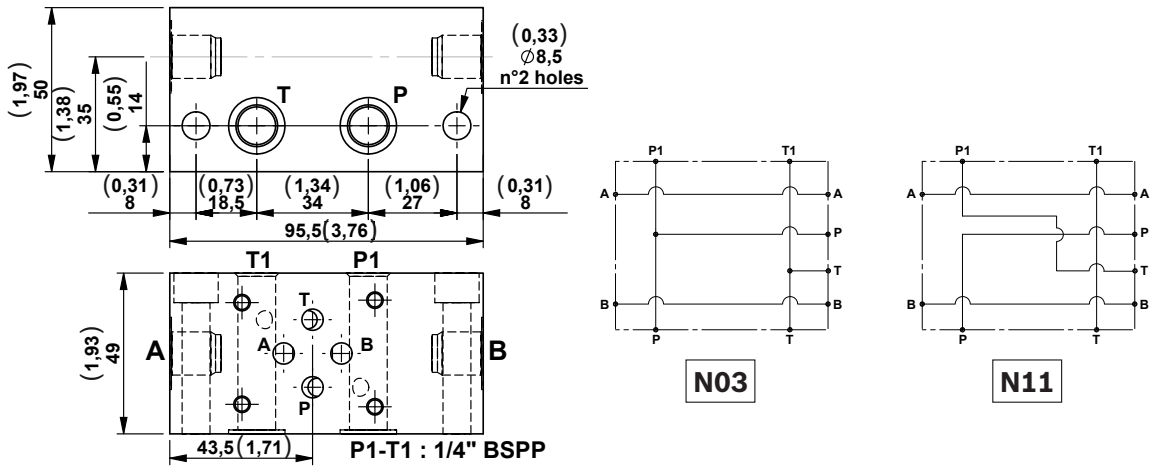


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N116	Modular block with filter on the return line (20 micron)	6 (87)	20 (5,28)	G386116010	R932001214

Modular block for CETOP 3 (2143) configuration valves

Modular blocks for CETOP 3 (2143) electrovalves for parallel or series circuits.

Each block includes 2 OR 2056 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N03-14	Modular block for CETOP3 (2143) configuration valves with A-B **1/4"** BSPP (**parallel circuit**)	300 (4351)	40 (10,57)	G386002010	R932001010

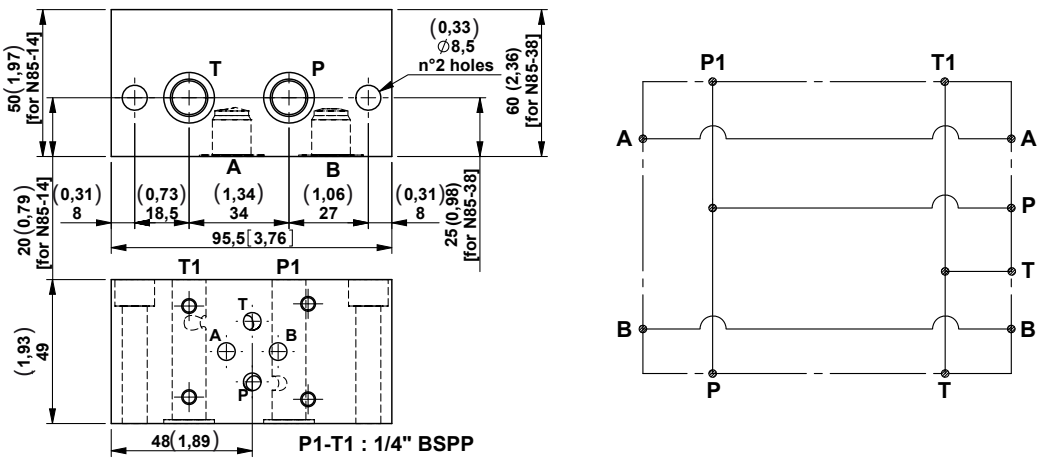
Modular block for CETOP 3 (2143) configuration valves

A modular block that is for CETOP 3 (2143) electrovalves for a parallel circuit with ports on the oppsite side of the valve.

Each block includes 2 OR 2056 gaskets.

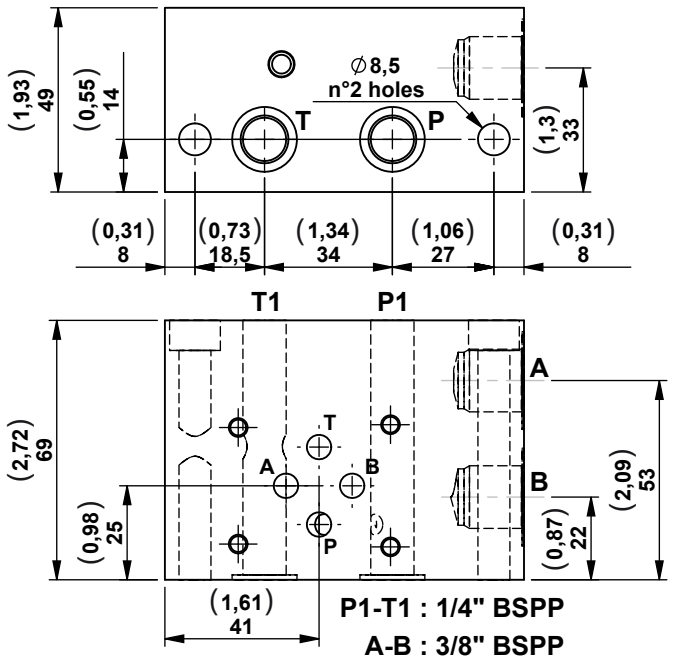


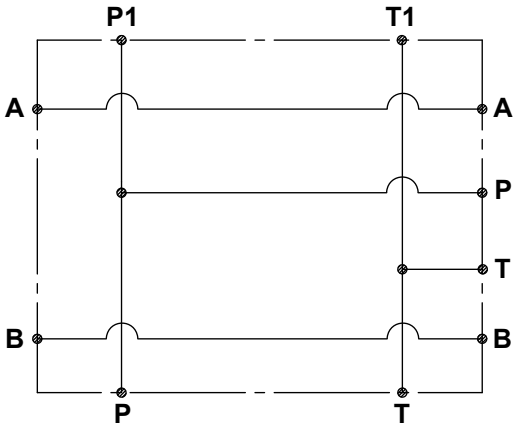
Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N85-14	Modular block for CETOP3 (2143) configuration valves with A-B **1/4"** BSPP (parallel circuit)	300 (4351)	40 (10,57)	G386084010	R932001158
N85-38	Modular block for CETOP3 (2143) configuration valves with A-B **3/8"** BSPP (parallel circuit)	300 (4351)	40 (10,57)	G386084020	R932001159

Modular block for CETOP 3 (2143) configuration valves with side ports

A modular block that is for CETOP 3 (2143) electrovalves for parallel circuit with side device ports on one face.

Each block includes 2 OR 2056 gaskets.





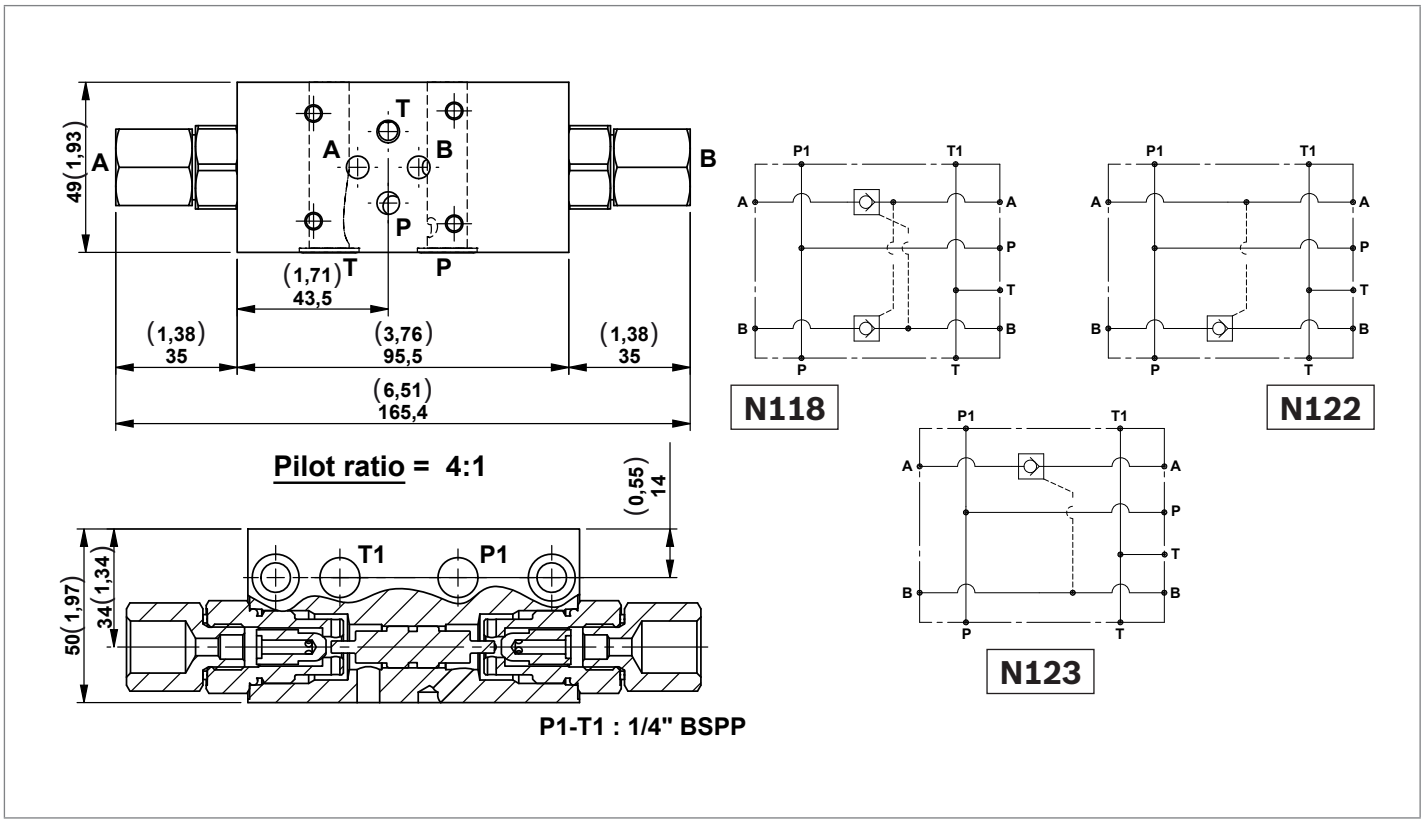
Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N142	Modular block for CETOP 3 (2143) confuguration valves with side ports	300 (4351)	40 (10,57)	G386142000	R932001252

Modular block with poppet type P.O. check valves for CETOP 3 (2143) configuration valves (parallel circuit)

A selection of modular block with P.O. check valves for block CETOP 3 (2143) electrovalves.

Each block includes 2 OR 2056 gaskets.

Possibility to have an OR gasket on the piloting piston for application with low flow.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N118-38	Modular block with poppet type P.O. check valves on A-B for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **3/8"** BSPP)	300 (4351)	20 (5,28)	G386118A02	R932001217

Modular blocks with two lowering solenoid valves, check valves, and compensated flow control throttle valves (available upon request)

Modular blocks to operate a single acting cylinder in a parallel circuit or a double acting cylinder in regenerative.

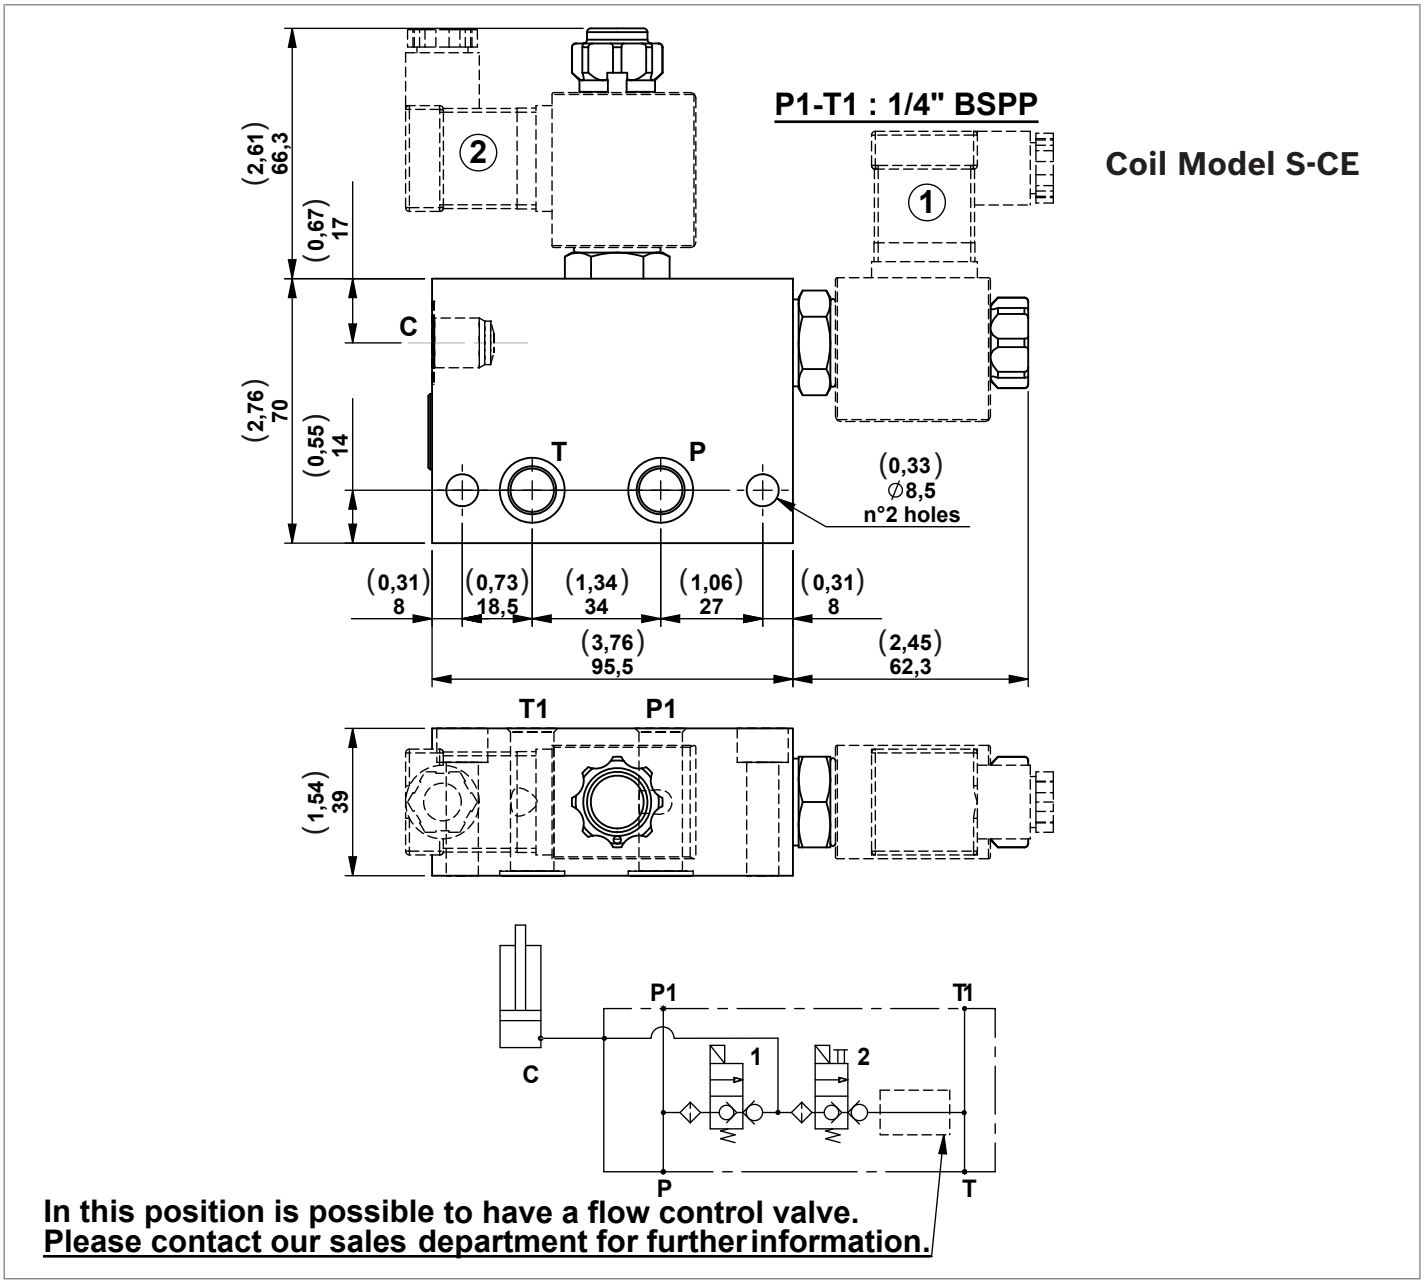
Each block includes 2 OR 2056 gaskets.

Minimum voltage required: 90% of nominal.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 42.

For the selection of connectors please refer to page 44.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V07-14	Modular block with 2 VE3-NC-VU with "C" port **1/4"** BSPP	250 (3626)	25 (6,60)	G386507010DC	R932001406
V07-38	Modular block with 2 VE3-NC-VU with "C" port **3/8"** BSPP	250 (3626)	25 (6,60)	G386507020DC	R932009707

Modular blocks with four way three position solenoid valve. Spool type

A selection of modular blocks with 4/3 spool type solenoid valve for small double acting cylinders.

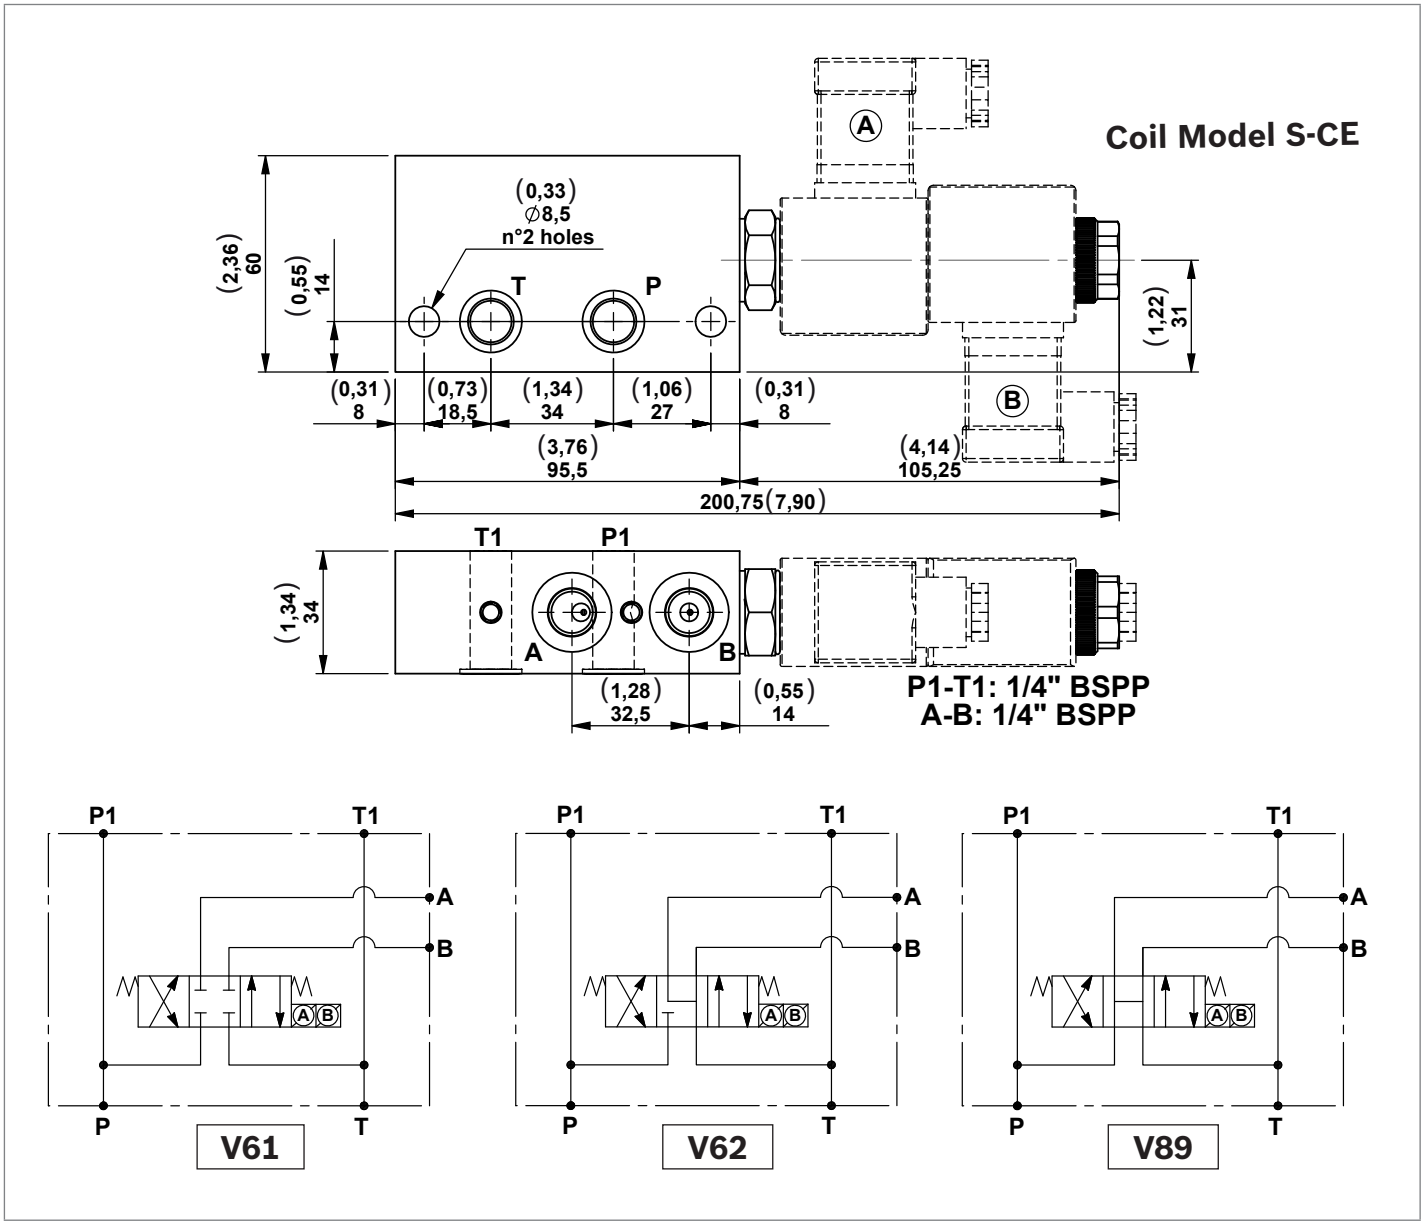
Each block includes 2 OR 2056 gaskets.

Minimum voltage required: 90% of nominal.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 42.

For the selection of connectors please refer to page 44.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V61	Modular block with 4 way 3 position solenoid valve (V4.3A)	210 (3046)	8 (2,11)	G386562010	R932001552

Modular block with four way three position solenoid valve and P.O. check valves on “A” and “B” line

A modular block with 4/3 spool type solenoid valve and P.O. check valves on “A” and “B” line. For small double acting cylinders.

Each block includes 2 OR 2056 gaskets.

Minimum voltage required: 90% of nominal.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 42.

For the selection of connectors please refer to page 44.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number

Modular blocks with double locking solenoid valve

Each block includes 2 OR 2056 gaskets.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 42.

For the selection of connectors please refer to page 44.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V106	Modular block with CE3-DT solenoid valve	210 (3046)	16 (4,23)	G386606020	R932001613
V115	Modular block with CE3-DT-EM solenoid valve	210 (3046)	16 (4,23)	1586500023	R932004543

Modular block with 2 double locking solenoid valves

Each block includes 2 OR 2056 gaskets.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 42.

For the selection of connectors please refer to page 44.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V220	Modular block with 2 CE3-DT-EM with ports 3/8” BSPP	210 (3046)	16 (4,23)	1586500098	R932009614

Modular block with 2 double locking solenoid valves

Each block includes 2 OR 2056 gaskets.

Minimum voltage required: 90% of nominal.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 42.

For the selection of connectors please refer to page 44.

Family

01	Power module type	**KE** **K** **KS**

Power module type of motor

02	Without motor	**0**
	With 3ph motor	**2**
	With 1ph motor	**3**

A.C. Electric motor

03	In the Power Module KE-KS type is possible to assemble every code of AC motor shown in the catalogue. In the Power Module K type is not possible to assemble AC Compact Mounting Style motors. (See pag.10-15)	

Junction Elements

04	The code of the Junction Element is showing in the page after the selected AC motor.	

Central Manifold with Pressure range Relief Valve + Request Setting of the Relief Valve in Bar

05	Select the required Central manifold with the required pressure range of the Relief valve and put the required setting in bar beetwen bracket.	

Built-in Valves

06	Insert the codes of the required valves following the number of the cavity in the Central Manifold (see page after the selected Central Manifold).	

Coil Model and Connector

07	In case of selection of Solenoid Built-in Valve choice the required coil Voltage and the required Connector. (See page 72-73)	

Gears pump

08	Is possible to select the required pump between Standard Version and Cast iron cover version. (See page 80)	

Oil Tank

09	Select the required Oil Tank. (See pag.82-92)	

Mounting Position and Mounting Brackets

10	Select the required working position of the Power Module and the position of the therminal box and Oil Filler cap in case of mounting position V1. If needed select the Mounting Bracket. (See pag.93-94)	

Modular Stackable Elements

11	If needed select the additional Modular Stackable Elements.	

Accessories

12	If needed select the additional Accessories.

General Technical Data for Compact Power Module KE-K and KS series

Through the years DCOC has developed a highly evolved modular system resulting in powerful, flexible and cost effective power pack range, identified as **“compact power modules”**. In its easier configuration, a “compact power module” is an assembly of electric motor, central manifold with valves, pump, oil tank and a few connection elements. The central manifold, with its built-in valves, allows to achieve a large variety of hydraulic control circuits. If more complex circuits are needed, modular integrated blocks can be added by flange mounting, or interfacing, to the central manifold to extend its capabilities.

Typical applications
Passenger lift
Fork lift
Car and motorcycle lift
Lift table
Dumper
Tail gate
Scissor lift
Gangway and davits for boats
Material handling
Foods machinery

Power module selection
Choose the circuit which meets your application requirements.
Take note of all dimensions resulting from the basic components chosen for your application.

Note
dimensions may vary slightly and should be confirmed by DCOC, if the assembly is to be installed in a space with narrow clearance.

The tank capacity and the tank dimensions need to be large enough to assure proper pump suction: there must always be a reserve of oil in the tank when all cylinders are fully extended and avoid overflow when cylinders are fully retracted.
The tank must be evaluated also for best separation of air from oil, and for settling down oil contamination. It should be placed in a space with, at least, natural ventilation and it should permit enough heat dissipation to prevent high fluid temperature.
Select the electric motor by evaluating the power needed and the motor compliance with the heat developed during the expected run time (or “duty cycle”).

Hydraulic fluid for compact power module
Mineral oil based hydraulic fluids suitable for hydraulic systems can be used; they should have physical lubricating and chemical properties as specified by:
MINERAL OIL BASED HYDRAULIC FLUIDS HL
(DIN 51524 part 1)
MINERAL OIL BASED HYDRAULIC FLUIDS HL P
(DIN 51524 part 2)
For use of environmentally friendly fluids please consult DCOC.

Fluid viscosity, temperature range of the operating fluid, ambient temperature
The fluid viscosity should remain within the range 10 to 300 cSt (centistokes); recommended 15 to 120 cSt.
Permissive cold start viscosity is maximum 2000 cSt.
The fluid temperature should remain within the range -15°C and 80°C (5°F and 176°F).

Note
For compact power module with plastic tank the fluid temperature should remain within the range -15°C and 70°C (5°F and 158°F).
Ambient temperature -15°C +40°C (5°F and 104°F).

Fluid cleanliness requirements and maintenance
We recommend a cleanliness of the operating fluid according to ISO 4406 Class 20/18/15 or cleaner.
All components of the hydraulic circuit , including hoses and actuators, must be flushed and cleaned before assembling, because the compact power module has a suction filter only.
The hydraulic fluid should be replaced after the first 50 hours, and then every 1000 hours, or, at least, once a year.

Power module installation
The mounting position (is basically un-restricted; just avoid installations that could compromise the pump suction, it is recommended to support the power module on vibration dampening blocks when the mounting structure is expected to vibrate.

Wiring and starting-up
The wiring between battery and electric motor should be selected in order to avoid excessive voltage drop (recommended less than 1 V).
It is strictly forbidden to allow the backwards rotation of the pump even at the first starting: to prevent reverse

rotation, the wiring polarities must be correctly connected (except for the reversible pumps).
Caution: when energized, the surface temperature of the electric motor could reach temperature levels of 60-80°C (140-176°F): care should be taken to avoid any accidental contact of people with the motor surface.

A.C. motors
The tolerances on the nominal voltage are:
Single phase motor: 230V +/-5% -
Three phase motor: 230-400V +/-10%.
Protection degree : IP54 (protection against dust and water splash).
Insulation class: F (155°C) (311°F).
All motors are aluminum alloy die cast without painting.

Note
Standard Single phase motors have a permanently connected run capacitor. If the motor starts with pressure in the circuit (load in the actuator) we suggest the use of specials dedicated manifolds KE series with integrated Start-Up valve (Manifold code M09 and M19).

D.C. Motors
DCOC has a wide range of D.C. motors. In the following pages you will find a selection of our standard range.
For further information about our complete range please contact our Sales department.
All the motors shown have clockwise rotation suitable for driving our counter clockwise gear pumps.
For each motor a diagram is shown that enables the customer to select the right pump displacement needed for the required flow and working pressure.
To be sure of selecting the best electric motor for the application, also the duty cycle has to be verified.
Following are the definitions of the type of duty cycles:
S2 = Short time duty cycle: indicate the number of minutes the motor can operate before reaching the maximum allowable temperature. After this time the motor must cool down until the ambient temperature is reached.
S3 = Intermittent duty cycle: indicate the maximum time percentage (%) based on 10 minute period within the motor can run until reaching the maximum allowable temperature. For example an S3 value of 15% = 1,5 minutes running time every 10 minutes period. For 8,5 minutes the motor is switched-off.
The S2 and S3 values are related to the current draw. On the label of motor are indicated the S2 and S3 values referred to the nominal power of the motor.
To check the S2 or S3 value at different conditions is necessary to find the value of current in the motor-pumps diagram and related it with the represented list.
All the diagrams motor-pumps are obtained at the nominal voltage of 12 or 24 Volt using fluid ISO VG 46 at 20-30°C (68-86°F).

Central manifolds
All the Central Manifolds shown in the catalogue are made in die cast aluminium alloy except the manifold code 10 for CPM MR series that is made by extruded bar. The validation of the Central Manifolds follows a life-test with 250 bar (625 psi) pulsed pressure repeated for 300.000 cycles.

Built-in valves
A wide range of cartridge valves and special plugs is available to be assembled in our Central Manifolds. The cartridge valves shown are designed for use in our Compact Power Module and are manufactured using steel with high mechanical strength. Surface treatments protect the exposed parts to the external environment. Standard seals are NBR (BUNA-N) with backup rings in PTFE. The cartridge valves with “leak proof seat design” have an average leakage of 10-15 drops/minute (< 1 cm^3/minute 0.06 in^3/min.) at the maximum pressure using fluid ISO VG46 at 40°C (104°F).
The validation of the cartridge valves follows a life-test at pulsed maximum pressure (indicated for each valve) repeated for 500.000 cycles.
All the solenoid cartridge valves are fitted with protective O-Rings installed between the pole tube and the coil. These O-Rings protect the internal parts from condensation and contaminants , which could cause malfunction.
All the solenoid cartridge valves except the 2/2 VE1 series are designed for operating in D.C..
Power supply in A.C. requires a connector with bridge rectifier included. All the data in the solenoid cartridge valves data sheet are obtained with stabilized coil operating temperature and voltage at -10% of the nominal value.

External gear pumps
DCOC offers a wide range of External Gear Pumps to cover different kinds of applications. The standard versions are suitable for the biggest part of applications. For applications requiring higher peaks of pressure (for example Fork Lift and Presses) a version with cast iron covers is available. For applications requiring high numbers of Start&Stop or low noise feature the tapered shaft version for elastic coupling is preferred (available only for central manifold K series with A.C. motors). All the pumps are pressure compensated to guarantee the best efficiency.

Oil tanks

In this catalogue you will find a wide selection of steel and plastic tanks available as a standard product. If a special tank is required please contact our Sales Department. Steel tanks have Black paint finish and are suitable for operating temperature range -15°C / +80°C (5°F / 176°F). Plastic tanks are obtained in one piece in order to avoid welded parts that are weak points at extreme temperature and vibrations. Plastic tanks are suitable for operating temperature range -15°C / +70°C (5°F / 158°F).

Note

even if the plastic tank mounting system is designed to avoid oil leakage the tank must be securely anchored when fitted in mobile equipment and when subject to shocks and heavy vibrations. Please check that the anchorages do not stress or deform the tank.

Modular stackable elements

Our modular system offers a wide range of standardised elements. They are divided in two main series:
Modular Elements “N” series: Modular blocks for different mounting position with mechanical valve or interface for CETOP valves to create parallel or series circuits.
Modular Elements “V” series: Modular blocks that incorporate solenoid operated cartridge valves 2,3,4 way.
All the Modular Elements are made in extruded aluminum alloy AL 2011 (AlCu5.5Pb0.4Bi0.4 UNI 9002/5). In the catalogue you will find a selection of the main used models.

Note

To reduce the complexity of the system and optimize the available space, special Modular Elements can be designed and manufactured following the customers needs. In this case please contact our Sales Department.

European machine directive 2006/42/CE

According to the Machine Directive2006/42/CE, a complete power module, as described in paragraph 15 and made available to the European market, enters into the definition of “partly completed machinery”.
Instead, the power module sub-assemblies (motor, pump, reservoir, central manifold,...), when not assembled into a complete power pack, are considered “components” which can be employed in a “machinery” or a “partly completed machinery”. In this case, the DCOC components and sub-assemblies must be fitted in compliance with all the relevant technical data sheet applicable to the product, and shall not be operated, adjusted or disassembled before the complete machinery where they are incorporated has been declared to be in compliance with the Machine Directive 2006/42/CE.

Note

All the components shown in the catalogue ARE NOT suitable for use in potentially explosive atmosphere.

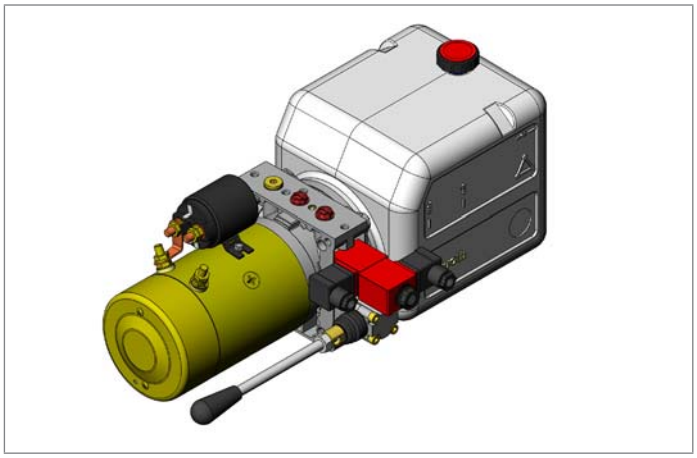
Technical information

Below you will find the most common equations used in hydraulics:

	Common Units	Symbols	Equations
Flow	l/min	Q	$Q = \frac{D \times n}{1000} \times 0{,}95$
Operating pressure	bar	P	$P = \frac{F}{0{,}1 \times A}$
Internal diameter hydraulic cylinder	mm	d	–
Area of hydraulic cylinder	mm^2	A	$A = \frac{\Pi \times d^2}{4}$
Piston force	N	F	–
Drive shaft	rev/min	n	–
Power requirement for motor	kW	N	$N = \frac{P \times Q}{612}$
Pump displacement	cm^3/rev	D	–
Torque requirement	Nm	M	$M = \frac{D \times P}{62{,}8 \times 0{,}87}$

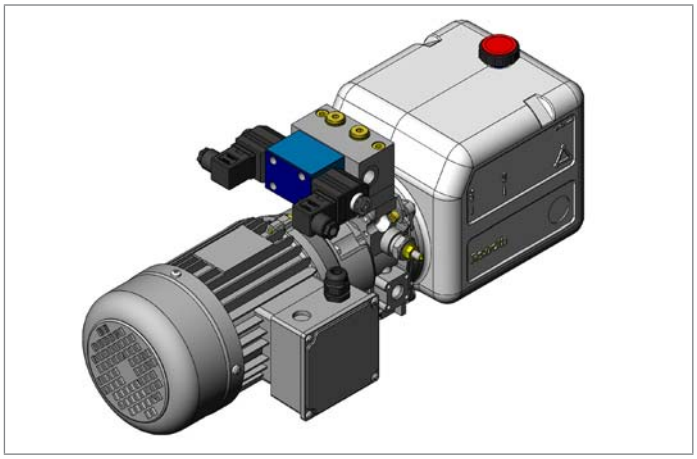
Compact Power Module Type

Standard Type KE series



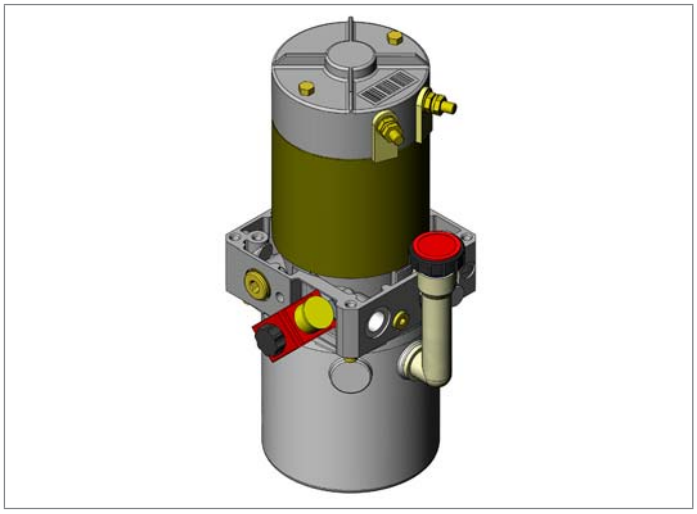
Complex circuits, direct flange AC motors.
DC motors up to 3000 W.
AC motors up to 4000 W (5,5 hp).
Pump displacement up to 7,9 cm3 (0,31 inch3).
Pressure up to 300 bar (4350 psi).
Optionals:
Start-up valve inside.
3-ways solenoid operated valve inside.
4-ways solenoid operated valve inside.
AC electric motor with direct coupling for smaller dimensions.

Optional Type K series



Standardized central manifold for simple hydraulics circuits.
DC motors up to 3000 W.
AC motors up to 4000 W (5,5 hp).
Pump displacement up to 7,9 cm3 (0,31 inch3).
Pressure up to 300 bar (4350 psi).
Optionals:
Elastic coupling.

Optional Type KS series

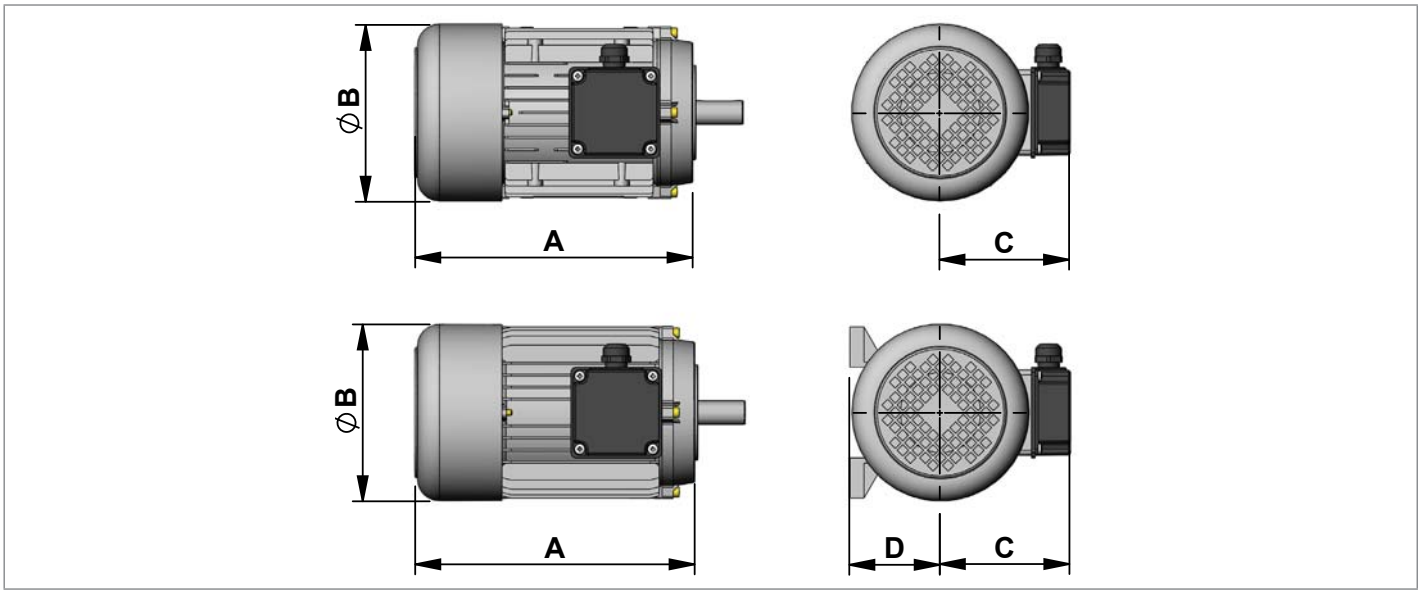


Designed for lifting applications.
Ready solution for simple acting circuits with the possibility of unloading valve.
DC motors up to 3000 W.
AC motors up to 4000 W (5,5 hp).
Pump displacement up to 7,9 cm3 (0,31 inch3).
Pressure up to 300 bar (4350 psi).

Note
that every power module type can be mounted in horizontal or vertical position.

A.C. Electric Motors Standard Flange

Standard A.C. Motors in B14 form.



2 Poles Three Phase

Current Motors 230/400V 50Hz 278-/480V 60Hz IP54 (2900 rpm at 50Hz)

Note

The electric motors with standard flange shown in this pages are delivered by different certified suppliers.
This means the indicated dimensions could change a little, depending on which manufacturer will be assembled.
On the CPM the choice of the manufacturer is based on our stock availability.

Junction Elements for A.C. Electric Motor Standard Flange

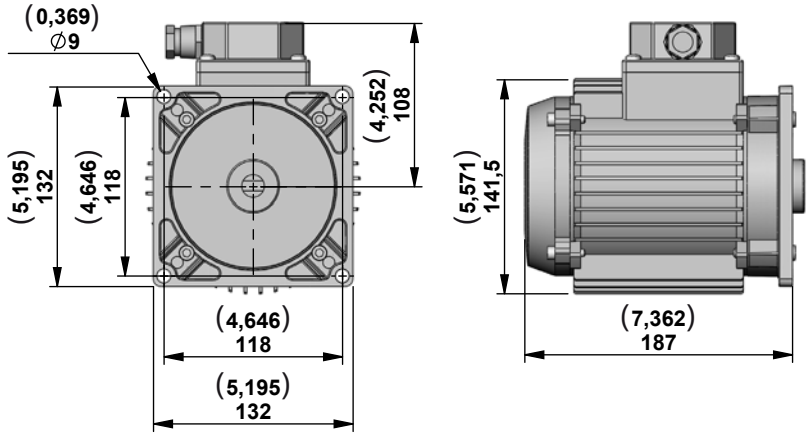
F26	409-408M 210-410	100 112	K01K3970TR028	R932001914

Note
The flanges shown in this page have the same dimensions as per the flanges used for standard couplings.
The elastic couplings are suggested for applications requiring low noise and applications with high frequency of START/STOP operations.

A.C. Electric Motor Compact Mounting Style for Power Module Type KE and KS

These motors are designed to reduce the overall dimensions and the cost of the junction elements.

They can be assembled only in the manifold KE and KS series.



Three Phase Current Motors 230/400V 50Hz IP54 Size IEC 71

Code	Type	Material Number	Power (kW)	Power (hp)	Poles	Rpm at 50Hz	Duty Cycle	Thermal Switch

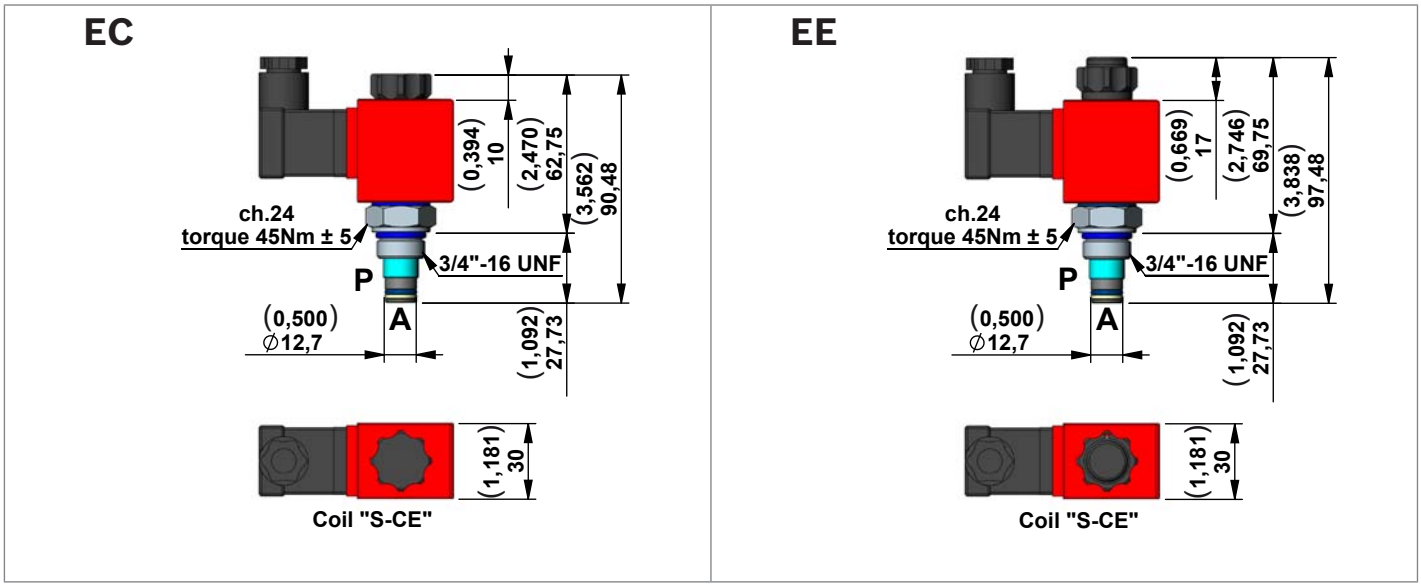
Built-in Valve

VE3-NC Series



2 Way Pilot Operated Solenoid Valves, Normally Closed for D.C. current

Code	Type	Material Number
EC	K01V389671A20	R932009180
EE	K01V389671E20	R932009181

Description

This is a standard 2 way pilot operated valves poppet style.

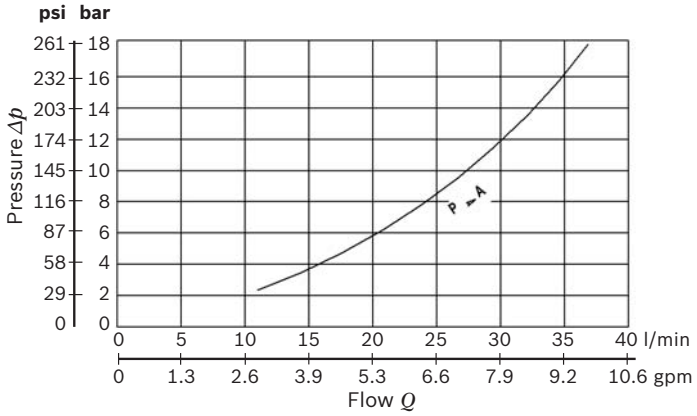
- **Only for D.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Screen on P 300 Micron.
- Screw Type Emergency on EE.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
EC		P ◇ A	P <-> A
EE		P ◇ A	P <-> A

Technical Data

General		
Operating time	ms	Opening 30-40
		Closing 60-85
Max. working pressure	bar (psi)	350 (5076)
Max. flow	l/min (gpm)	30 (7,92)



S-CE Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

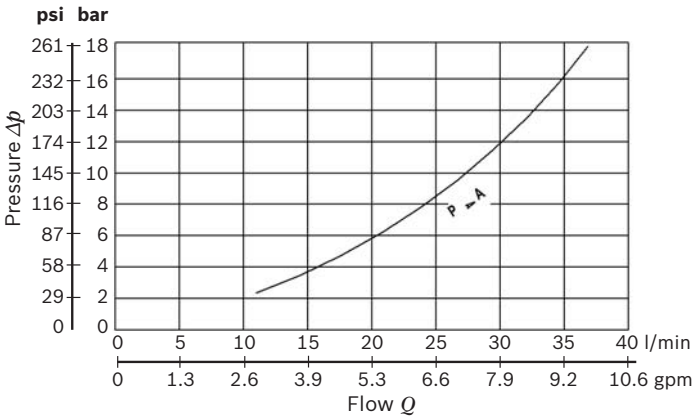
Technical Data

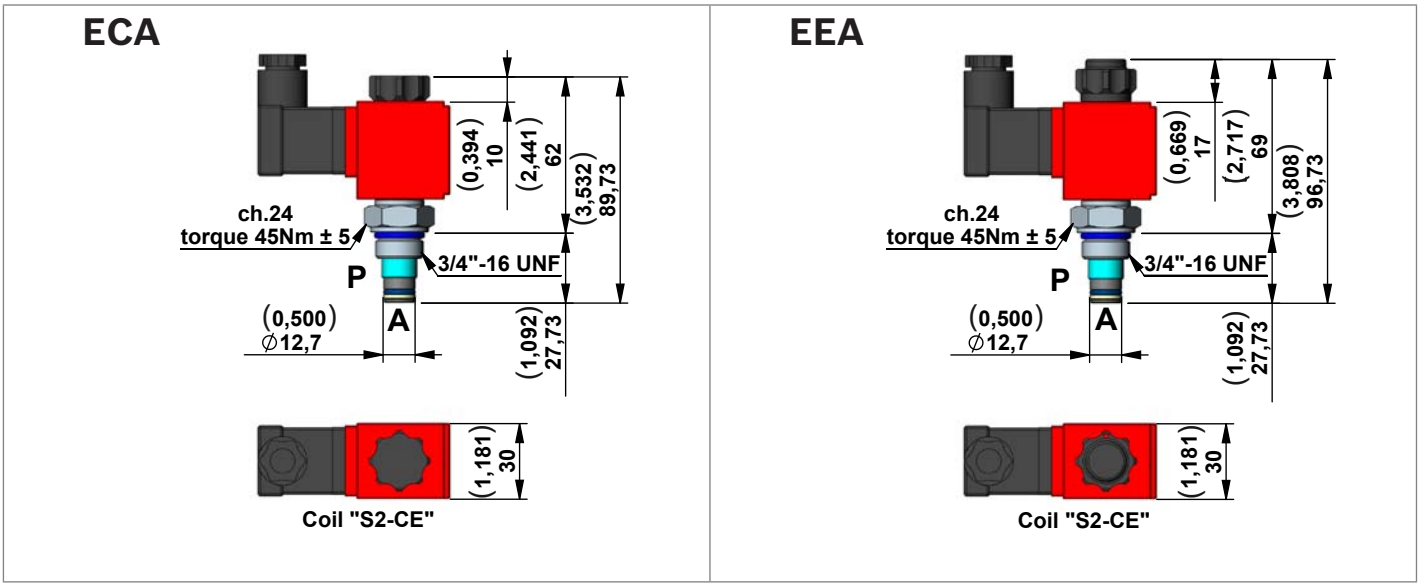
General		
Operating time	ms	Opening 30-40
		Closing 60-85
Max. working pressure	bar (psi)	350 (5076)
Max. flow	l/min (gpm)	30 (7,92)



S-CE Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

VE1-NC Series



2 Way Pilot Operated Solenoid Valves, Normally Closed for A.C. current

Code	Type	Material Number
ECA	K01V389669A20	R932009182
EEA	K01V389669E20	R932009183

Description

This is a standard 2 way pilot operated valves poppet style.

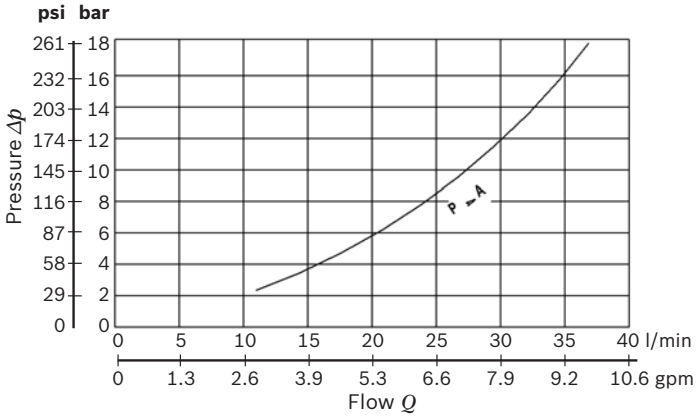
- **Only for A.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Screen on P 300 Micron.
- Screw Type Emergency on EEA.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
ECA		P ⬡ A	P -> A
EEA		P ⬡ A	P -> A

Technical Data

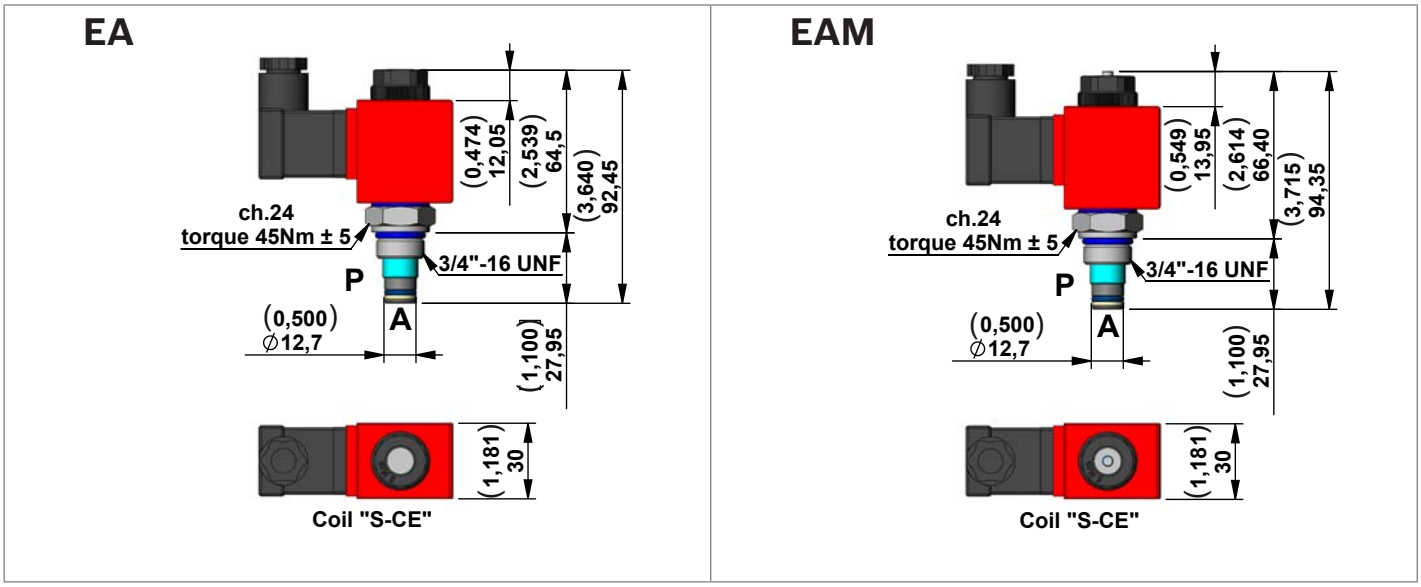
General		
Operating time	ms	Opening 30-40
		Closing 60-85
Max. working pressure	bar (psi)	350 (5076)
Max. flow	l/min (gpm)	30 (7,92)



S2-CE Coil Voltage Available

Voltage
24 Volts 50 Hz A.C.
220 Volts 50 Hz A.C.
24 Volts 60 Hz A.C.
220 Volts 60 Hz A.C.
24 Volts 50-60 Hz A.C.

VE3-NA Series



2 Way Pilot Operated Solenoid Valves, Normally Open

Code	Type	Material Number
EA	K01V389674A20	R932009184
EAM	K01V389674E20	R932009185

Description

This is a standard 2 way pilot operated valves poppet style.

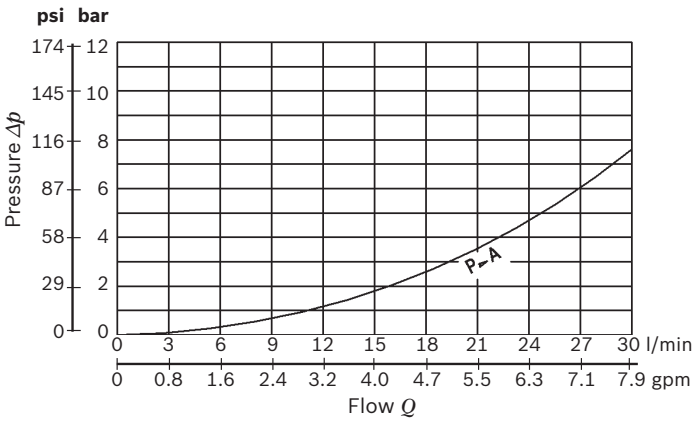
- **Only for D.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Screen on P 300 Micron.
- Push Type Emergency on EAM.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
EA		P -> A	P ○ A
EAM		P -> A	P ○ A

Technical Data

General		
Max. working pressure	bar (psi)	230 (3336)
Max. flow	l/min (gpm)	20 (5,28)

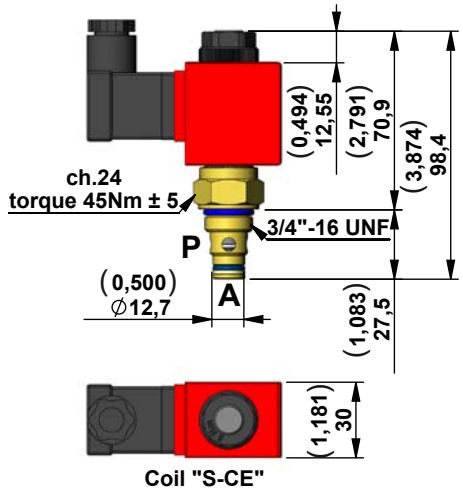


S-CE Coil Voltage Available

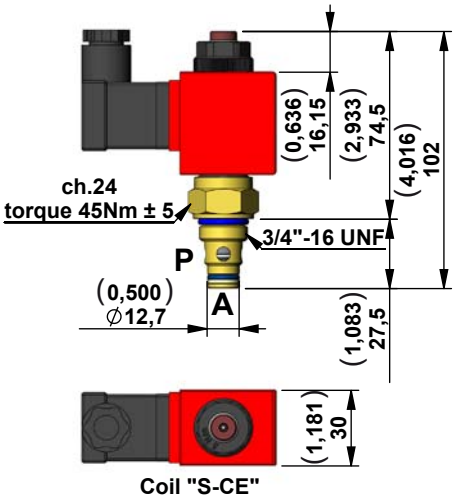
Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

CEI6-NA Series

EA6



EA6M



2 Way Pilot Operated Solenoid Valves, Normally Open

Code	Type	Material Number
EA6	K01V389664B20	R932009186
EA6M	K01V389664M20	R932009187

Description

This is a standard 2 way pilot operated valves poppet style.

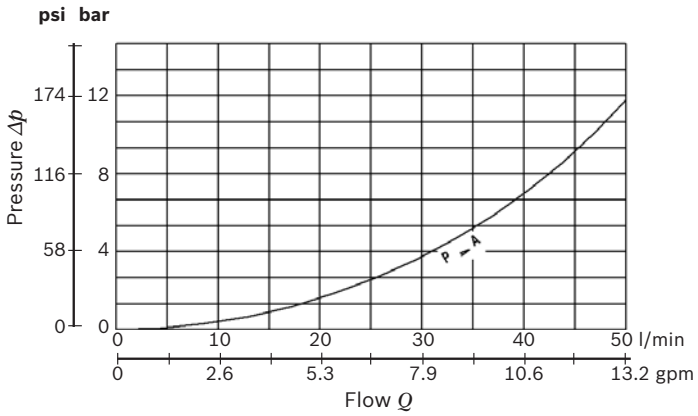
- **Only for D.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Push Type Emergency on EA6M.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
EA6		P → A	P ⬡ A
EA6M		P → A	P ⬡ A

Technical Data

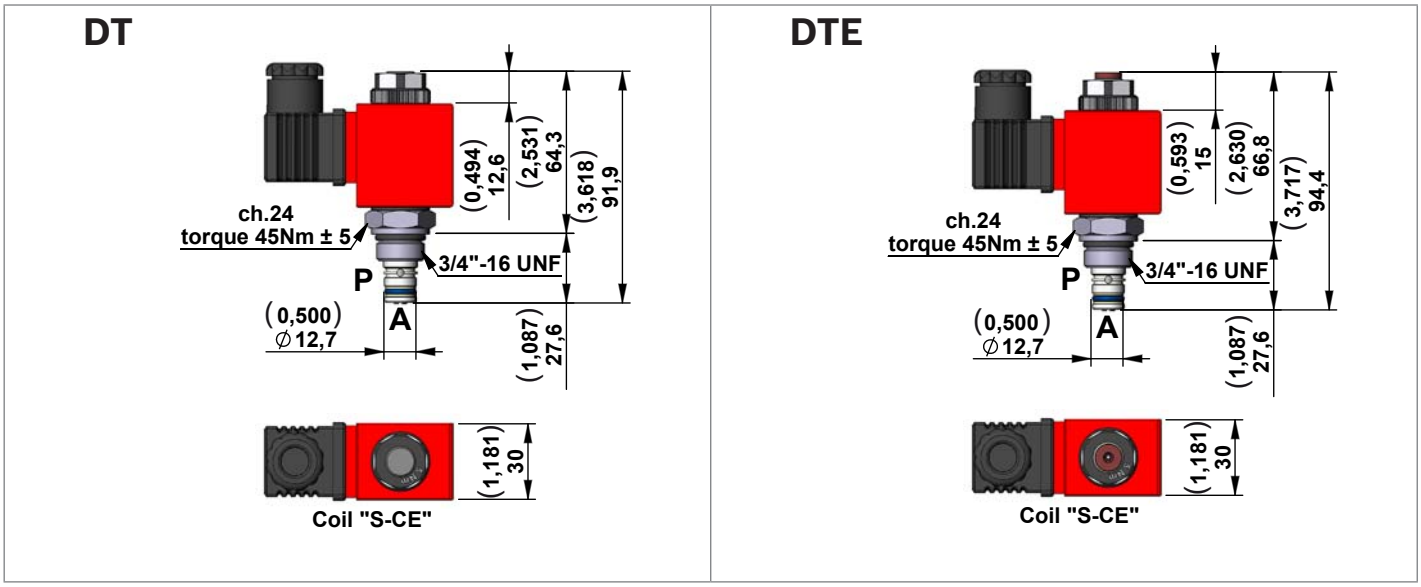
General		
Max. working pressure	bar (psi)	350 (5076)
Max. flow	l/min (gpm)	40 (10,57)



S-CE Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

CE3-DT Series (for manifold M32)



2 Way direct acting double lock Solenoid Valves, Normally Closed for D.C. current

Code	Type	Material Number
DT	K01V389622A20	R930053009
DTE	K01V389622E20	R930053010

Description

On this valve the oil can pass free or can be perfectly locked on each ports “P” and “A”.

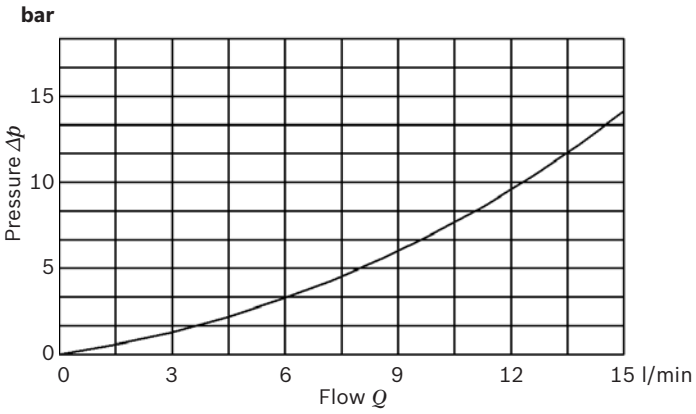
- **Only for D.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Push Type Emergency on DTE push..

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
DT		P ◇ A A ◇ P	P → A A → P
DTE		P ◇ A A ◇ P	P → A A → P

Technical Data

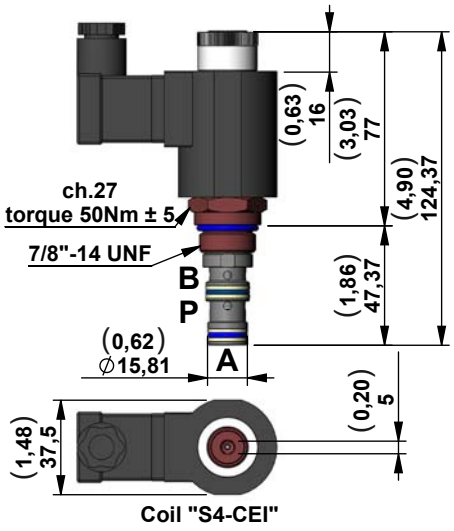
General		
Operating time	ms	Opening 15-20
		Closing 20-45
Max. working pressure	bar (psi)	210 *(3046)*
Max. flow	l/min (gpm)	15 *(3,96)*



S-CE Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

V3D-DT Series



3 Way Direct Acting Poppet Style Solenoid Valves

Code	Type	Material Number
V3DT	K01V389643A00	R932009299

Description

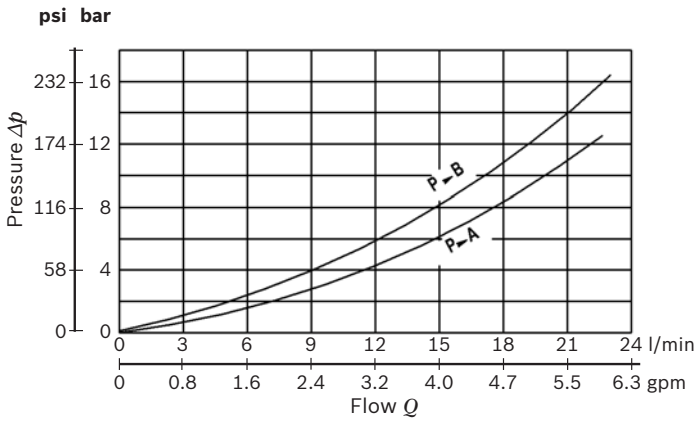
3 Way Direct Acting Poppet Style Solenoid Valves
- **Only for D.C. current.**
- Internal leakage: see technical data.
- Minimum operating voltage: 90% of nominal.
- Push Type Emergency.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	**Energized**
V3DT		P ↔ A B ○○	P ↔ B A ○○

Technical Data

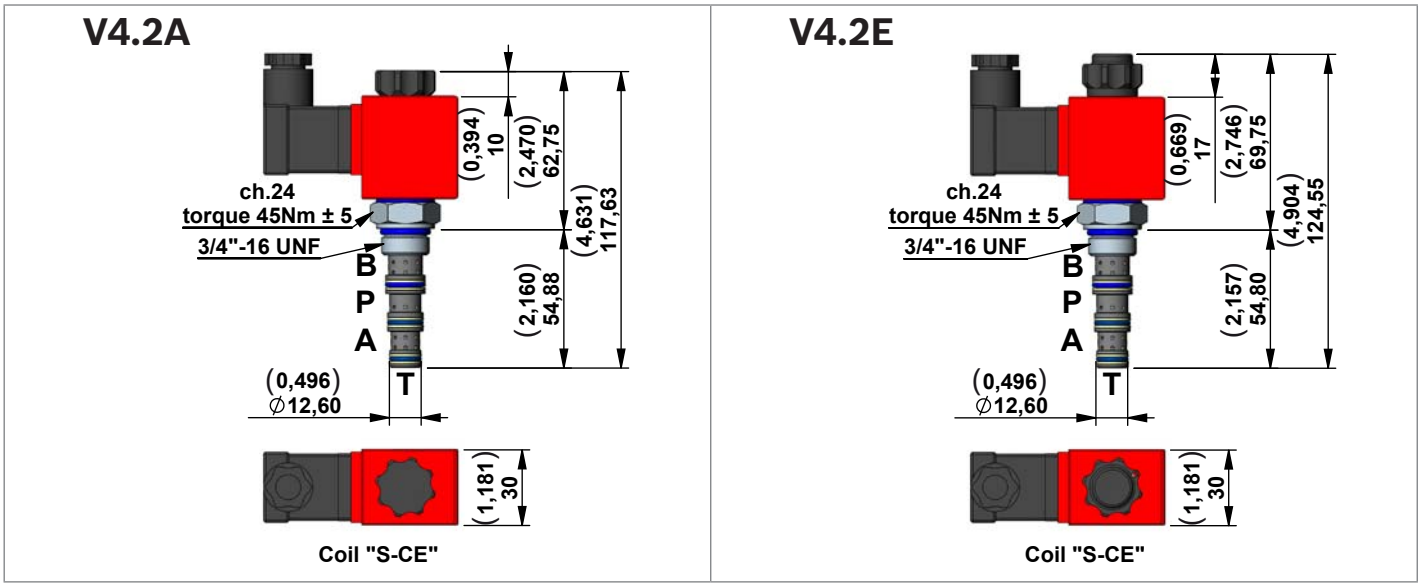
General		
Max. working pressure	bar (psi)	250 (3626)
Max. flow	l/min (gpm)	20 (5,28)



S4-CEI Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
24 Volts RAC
110 Volts RAC
220 Volts RAC

V4DS-2P Series



4 Way 2 Position Solenoid Valves Spool Type

Code	Type	Material Number
V4.2A	K01V389656A00	R932009300
V4.2E	K01V389656E00	R932009301

Description

4 Way 2 Position Solenoid Valves Spool Type

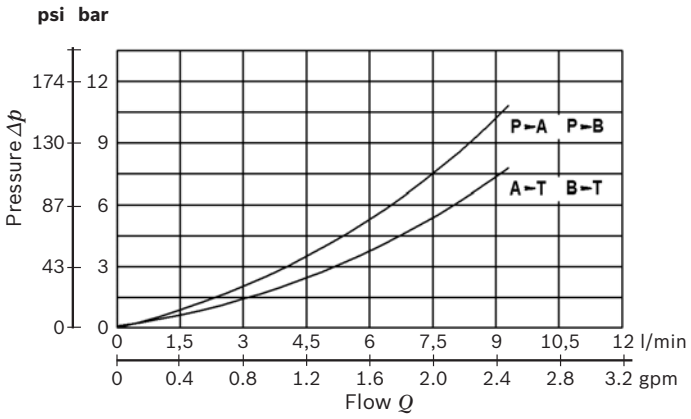
- **Only for D.C. current.**
- Minimum operating voltage: 90% of nominal.
- Screw Type Emergency on V4.2E.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
V4.2A		P <-> A B <-> T	P <-> B A <-> T
V4.2E		P <-> A B <-> T	P <-> B A <-> T

Technical Data

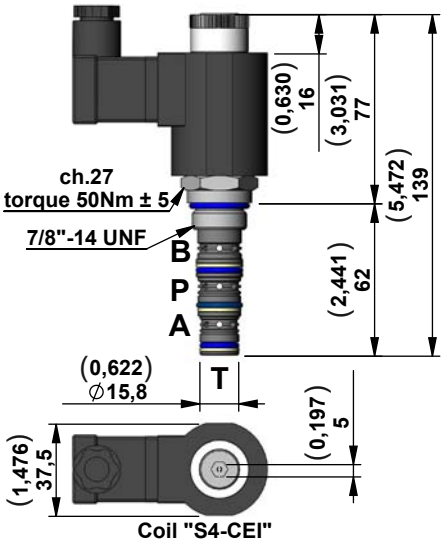
General		
Max. working pressure	bar (psi)	210 (3046)
Max. flow	l/min (gpm)	8 (2,11)



S-CE Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
48 Volts D.C.
24 Volts RAC
48 Volts RAC
110 Volts RAC
220 Volts RAC

V4D-CEI-2P Series



4 Way 2 Position Solenoid Valves Spool Type

Code	Type	Material Number
V4I.2E	K01V389631A10	R932009302

Description

4 Way 2 Position Solenoid Valves, Spool Type

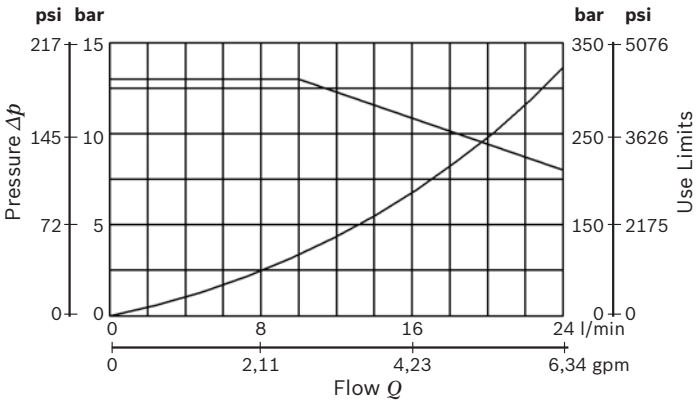
- **Only for D.C. current.**
- Minimum operating voltage: 90% of nominal.
- Push Type Emergency.

Valve symbol

Code	Symbol	Operating features with solenoid	
		De-energized	Energized
V4I.2E		P ↔ B A ↔ T	P ↔ A B ↔ T

Technical Data

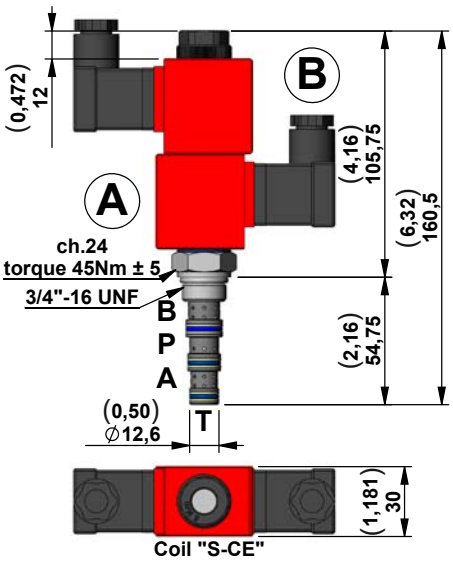
General		
Max. working pressure	bar (psi)	see diagram
Max. flow	l/min (gpm)	25 (6,60)



S4-CEI Coil Voltage Available

Voltage
12 Volts D.C.
24 Volts D.C.
24 Volts RAC
110 Volts RAC
220 Volts RAC

V4DS-3P Series



4 Way 3 Position Solenoid Valves Spool Type

Code	Type	Material Number
V4.3A	K01V389657A00	R932009303
V4.3B	K01V389657B00	R932009304
V4.3C	K01V389657C00	R932009305

Description

4 Way 3 Position Solenoid Valves Spool Type

- **Only for D.C. current.**
- Minimum operating voltage: 90% of nominal.

Valve symbol

Code	Symbol	Operating features with solenoid		
		Energized A	**De-energized**	**Energized B**

24 Volts D.C.
24 Volts RAC
110 Volts RAC
220 Volts RAC

COIL Model S-CE – 18W – ED 100%

for valves VE3-NC, VE3-NA, V4DS-2P, V4DS-3P Series

Coil protection: Polyamide resin with fiber glass for Heat insulation class F (155°C (311°F)) IXEF for Heat insulation class H (180°C (356°F)).

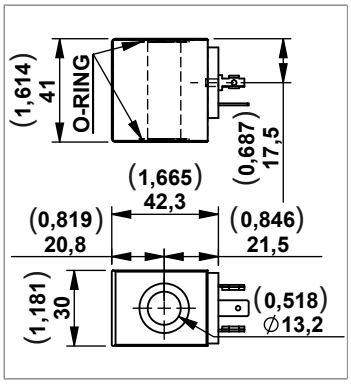
Solenoids “S-CE” (18 W) are designed for continuos duty ED100%.

Ambient temperature range: -15°/+40°

Inlet voltage fluctuations must not exceed +/- 10% of nominal voltage to obtain correct operations and long life coils

Protection degree: see tables below

DIN 43650 - ISO 4400 IP65 with connector assembled



Code	Voltage	Heat Insulation class	Type	Material Number
OB	12 Volts D.C.	F (155°C) (311°F)	C166455OB1	R932000804

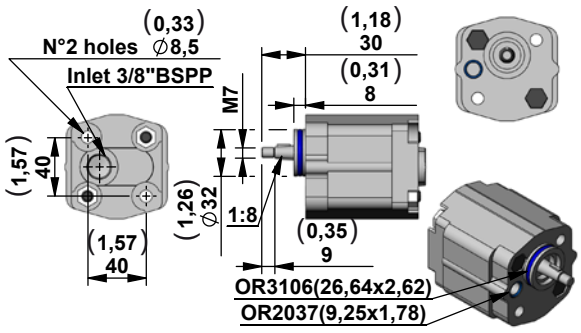
17GH	4,2	6,3 (1,66)	230(3336)	280(4061)	K01CV640S1149C	R932007485
18GH	5	7,5 (1,98)	210(3046)	250(3626)	K01CV640S1150C	R932007486
19GH	5,7	8,5 (2,24)	210(3046)	250(3626)	K01CV640S1153C	R932007487
20GH	7,4	11,1 (2,93)	180(2611)	230(3336)	K01CV640S1152C	R932007488

Note
All pumps have anti-clockwise rotation.

Gear Pumps Group 1 for K

Elastic couplings version with tapered shaft*



P2: intermittent max Pressure.
P3: peak Max Pressure (max 2 seconds)

Code	Displacement cc/rev	Flow at 1500 rpm l/min (gpm)	P2 bar (psi)	P3 bar (psi)	Type	Material Number
10CON	0,82	1,3 (0,34)	230(3336)	270(3916)	K01CV640S1132	R932007498
11CON	1,1	1,6 (0,42)	230(3336)	270(3916)	K01CV64017000	R932007499
12CON	1,6	2,4 (0,63)	230(3336)	270(3916)	K01CV64018000	R932007500

18CON	4,8	7,2 (1,90)	190(2756)	230(3336)	K01CV64024000	R932007506
19CON	5,8	8,7 (2,30)	190(2756)	230(3336)	K01CV64025000	R932007507
20CON	7,9	11,8 (3,12)	160(2320)	200(2901)	K01CV64026000	R932007508

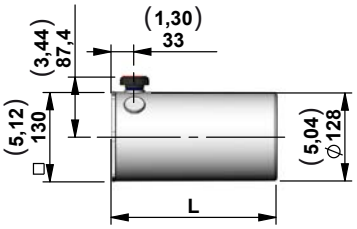
***Note**
The assembly of the gear pumps with tapered shaft are only possible in the manifolds K series with the following junction elements:
- Motor size IEC71: junction element code F82
- Motor size IEC80: junction element code F24
- Motor size IEC90: junction element code F25
- Motor size IEC100-112: junction element code F26

Oil Tanks for KE - K - KS

Technical Data for Plastic Tanks

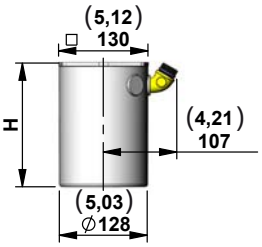
Temperature range	°C (°F)	-15....+70 (5....158)
Materials		PE=Polyethylene - PP=Polypropilene
Seal		For tanks codes S335-S336-S337-S338-S339-S340-S341-S342 is necessary to use the O-RING Ø112x3 Code: C000191000 R-Number:R932000190. For all the other tanks except the codes above is necessary to use the O-RING 4437 (Ø110,7x3,53) Code:110201203000000 R-Number:R932000188

Code	Tank capacity l (USgal)	Useable capacity l (USgal)	L mm (inch)	Material	Type	Material Number	Drawing
S335	1,0 (0,26)	0,7 (0,18)	140 (5,51)	PP	K01K3976SE372	R932002035	
S336	1,8 (0,48)	1,2 (0,32)	180 (7,09)	PP	K01K3976SE373	R932002036	
S337	2,5 (0,66)	1,7 (0,45)	240 (9,45)	PP	K01K3976SE374	R932002037	
S338	3,0 (0,79)	2,3 (0,61)	285 (11,22)	PP	K01K3976SE375	R932002038	



For this tanks is necessary to use the O-RING Ø112x3 code: C000191000 R-Number: R932000190

Code	Tank capacity l (USgal)	Useable capacity l (USgal)	H mm (inch)	Material	Type	Material Number	Drawing
S339	1,0 (0,26)	0,6 (0,16)	140 (5,51)	PP	K01K3976SE376	R932007882	
S340	1,8 (0,48)	1,1 (0,29)	180 (7,09)		K01K3976SE377	R932007883	
S341	2,5 (0,66)	1,7 (0,45)	240 (9,45)		K01K3976SE378	R932007884	
S342	3,0 (0,79)	2,3 (0,61)	285 (11,22)		K01K3976SE379	R932007885	



For this tanks is necessary to use the O-RING Ø112x3 code: C000191000 R-Number: R932000190

***Note**
In order to avoid to support the weight of motor by the collar of the tank when the tanks with fixing brakets are used, it is strongly suggested to support also the central manifold.

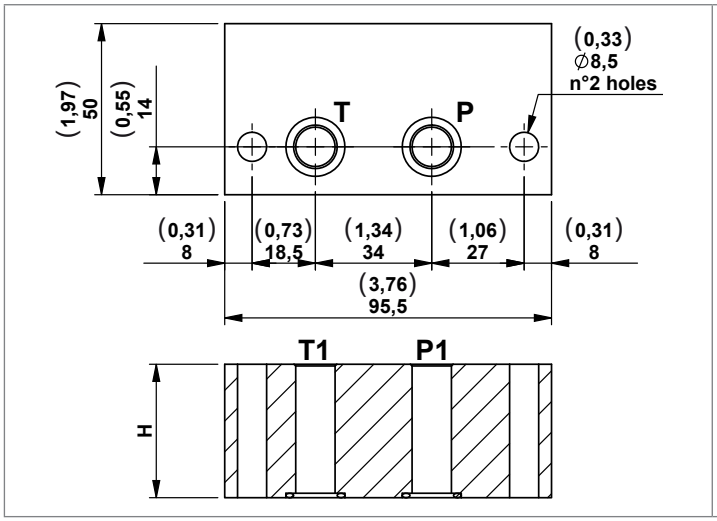
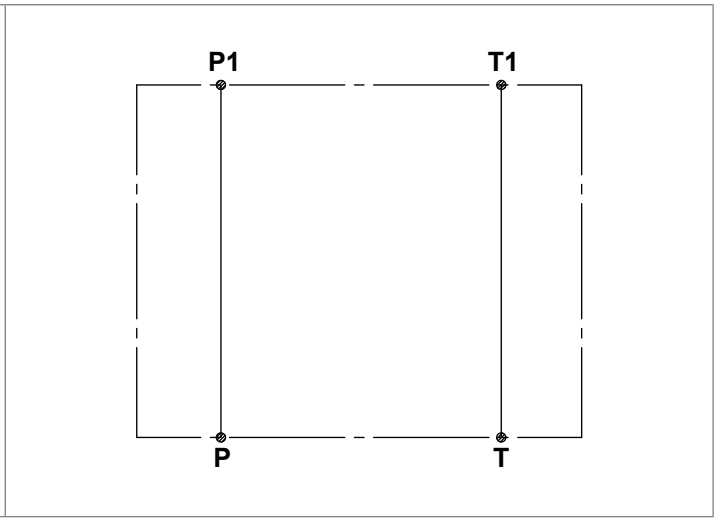
Modular Stackable Elements

Space Modular Block

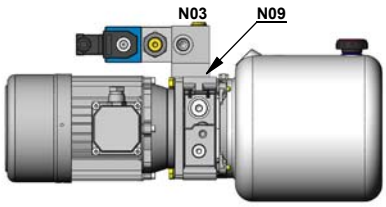




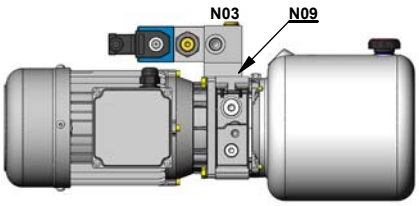
These modular blocks have been designed to have the ability to be assembled as a stack to allow clearence between flanges and motors of different sizes and types. Each block includes 2 OR 3056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N09	Space modular block **H=18**	300 (4351)	40 (10,57)	G386010000	R932001058
N01	Space modular block **H=39**	300 (4351)	40 (10,57)	G386001000	R932001005
N02	Space modular block **H=69**	300 (4351)	40 (10,57)	G386038000	R932001122

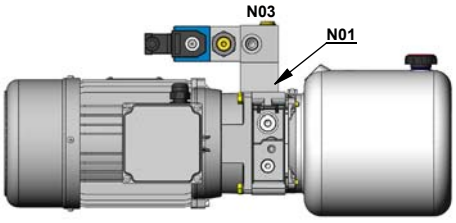
Motor IEC71 frame Coupling TR02



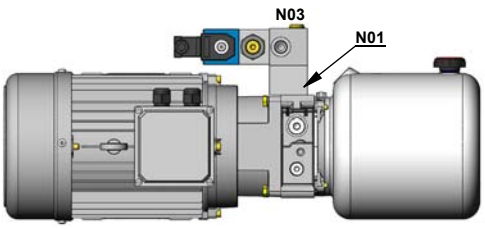
Motor IEC80 frame Coupling TR03



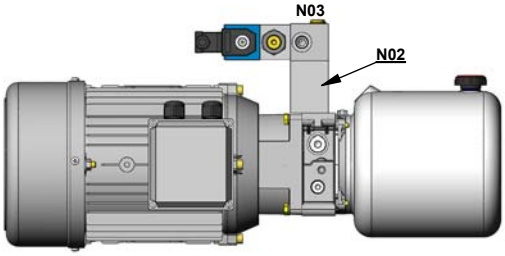
Motor IEC90 frame Coupling TR04



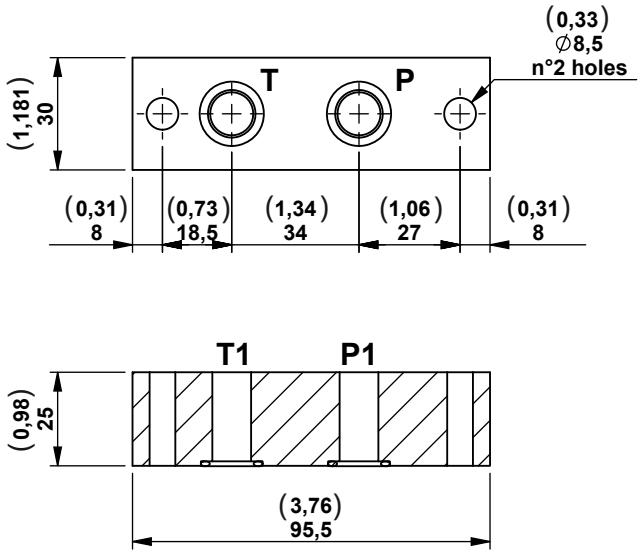
Motor IEC100 frame Coupling TR05

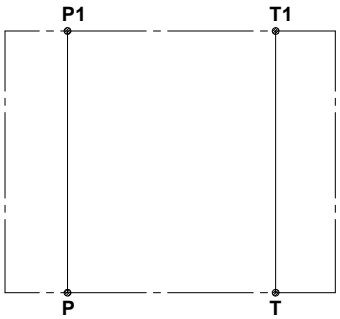


Motor IEC112 frame Coupling TR05



Space Modular Block

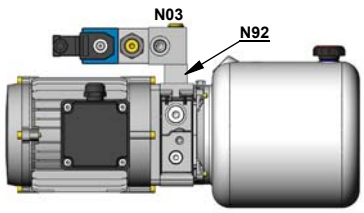




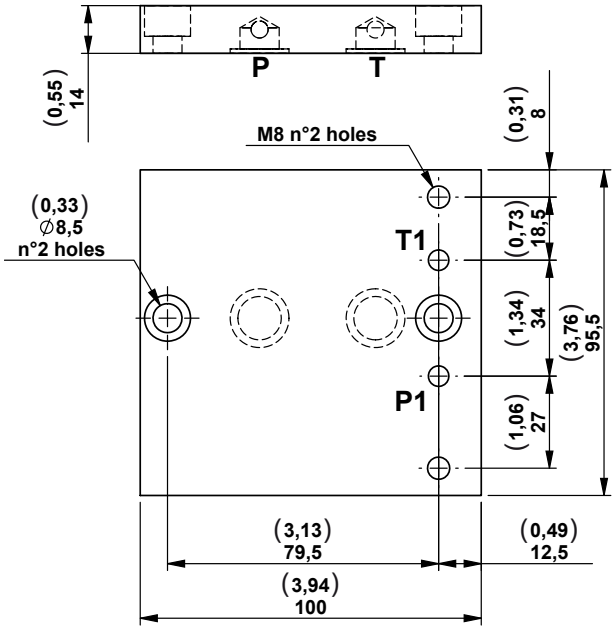
Space Modular Block to fix a compact mounting style electric motor on power module KE type.
This block includes 2 OR 3056 gaskets.

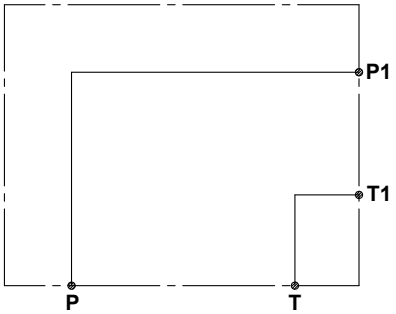
Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N92	Space modular block	300 (4351)	40 (10,57)	G386091000	R932001167

Application Example



90° Rotation modular block

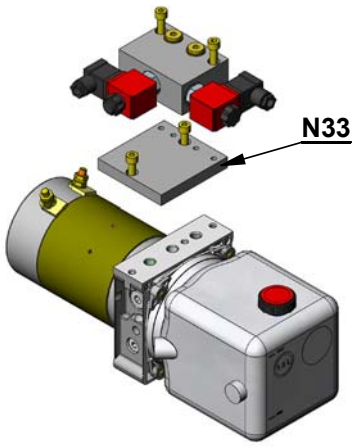




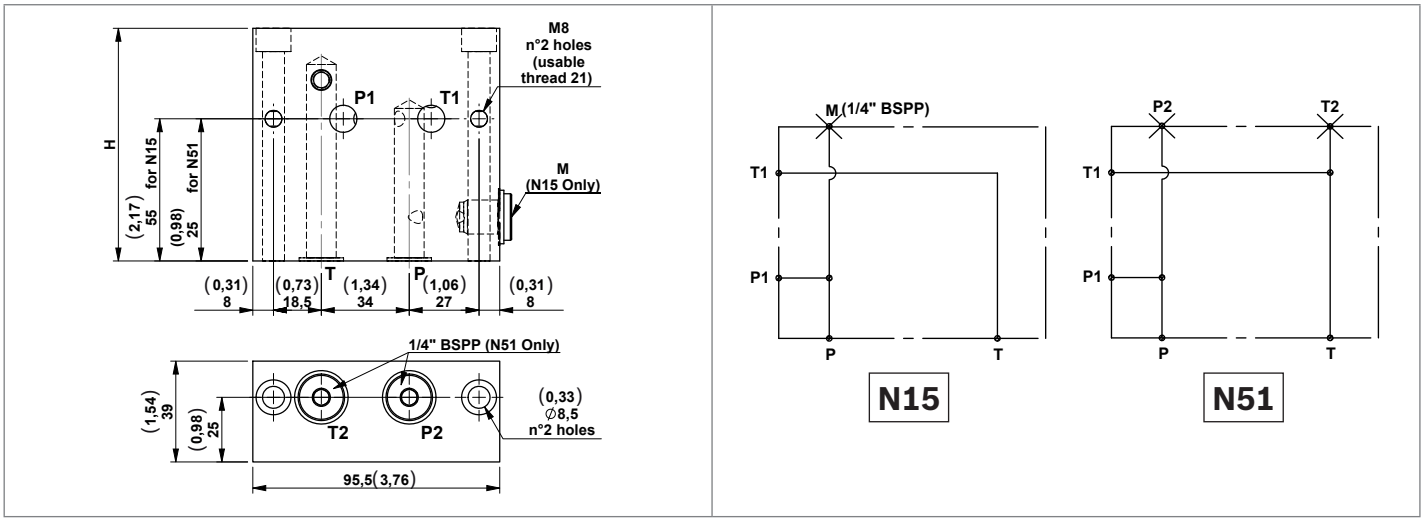
A modular block that is able to have a 90° rotation from our standard OILSISTEM configuration, but keeping the block on the same surface allowing a different position of any other modular block.
Each block includes 2 OR 2056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N33	90° rotation modular block	300 (4351)	20 (5,28)	G386032000	R932001110

Application Example



90° modular block allowing horizontal mounting (motor side)

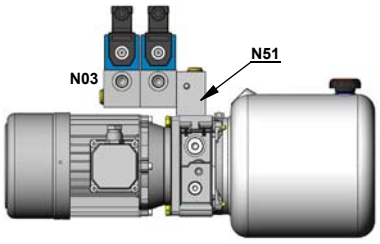


A modular block that is able to turn the standard assembling of 90°, in order to place other manifold blocks over the motor.

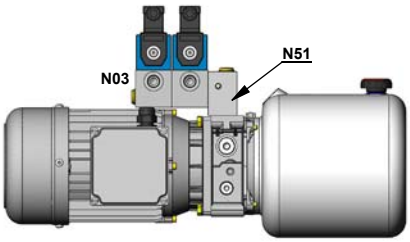
The “N15” block has a 1/4” BSPP port for Pressure Gauge. Each block includes 2 OR 2056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N15	90° modular block allowing horizontal mounting (motor side) **H=90**	300 (4351)	35 (9,25)	G386014000	R932001087
N51	90° modular block allowing horizontal mounting (motor side) **H=60**	300 (4351)	35 (9,25)	G386050000	R932001146

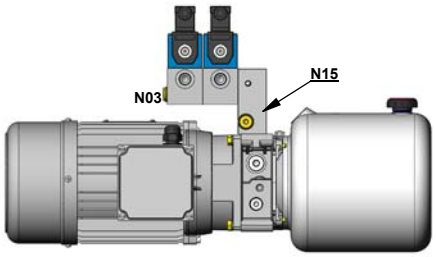
Motor IEC71 frame Coupling TR02



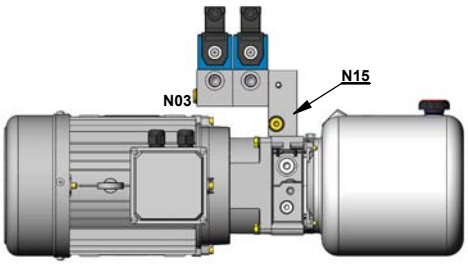
Motor IEC80 frame Coupling TR03



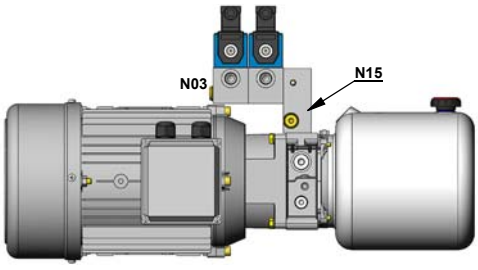
Motor IEC90 frame Coupling TR04



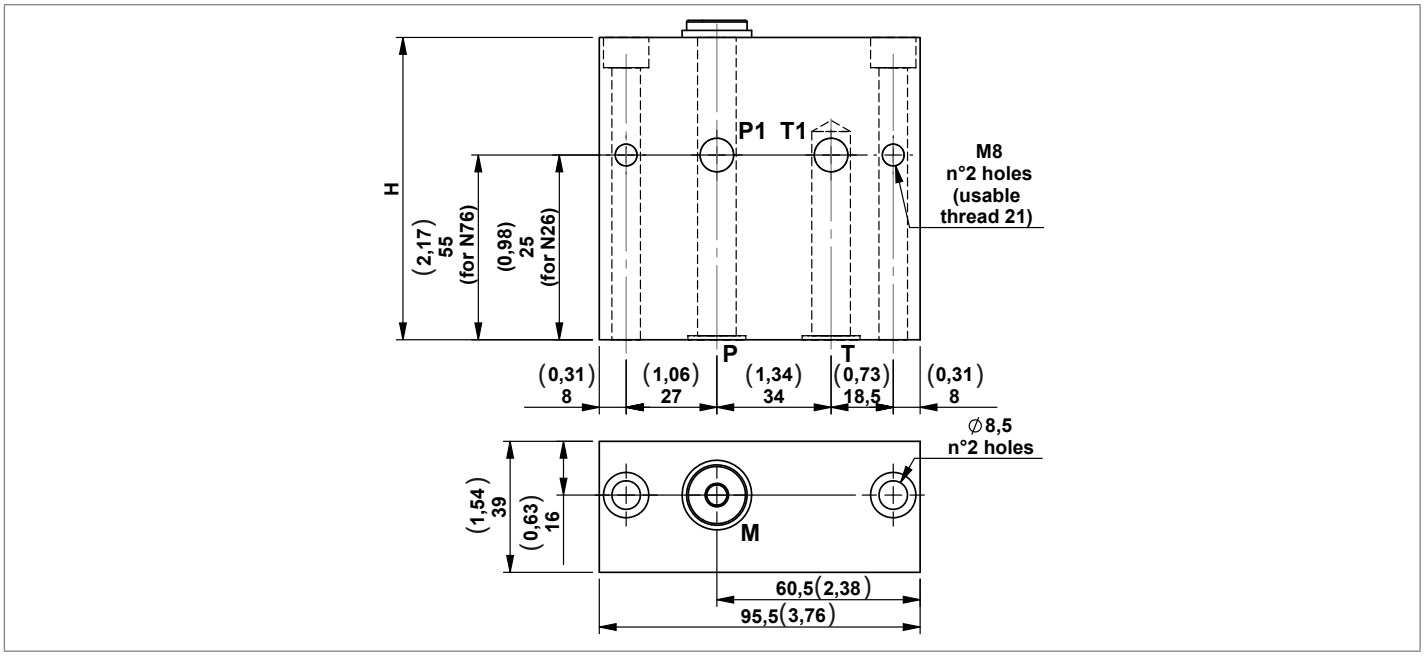
Motor IEC100 frame Coupling TR05

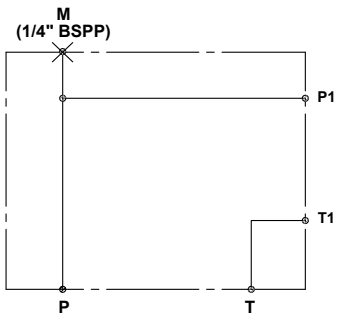


Motor IEC112 frame Coupling TR05



90° modular block allowing horizontal mounting (tank side)

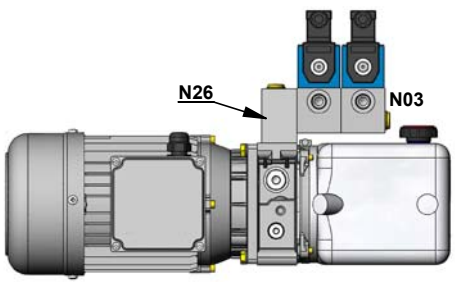




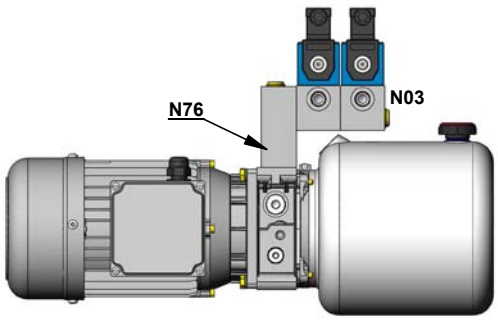
A modular block that is able to turn the standard assembling of 90°, in order to place other blocks over the tank.
The blocks have a 1/4” BSPP port for Pressure Gauge.
Each block includes 2 OR 2056 gaskets.

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N76	90° modular block allowing horizontal mounting (tank side) **H=90**	300 (4351)	35 (9,25)	G386075000	R932001153
N26	90° modular block allowing horizontal mounting (tank side) **H=60**	300 (4351)	35 (9,25)	G386025000	R932001100

Tank H=134



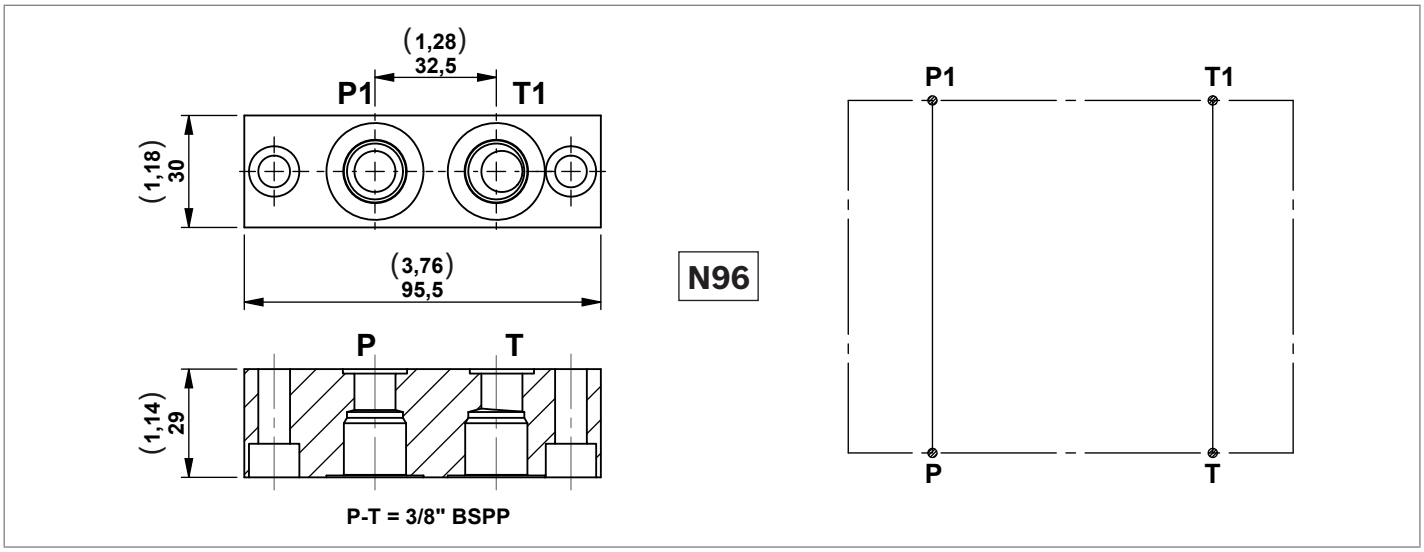
Tank Diameter Ø190

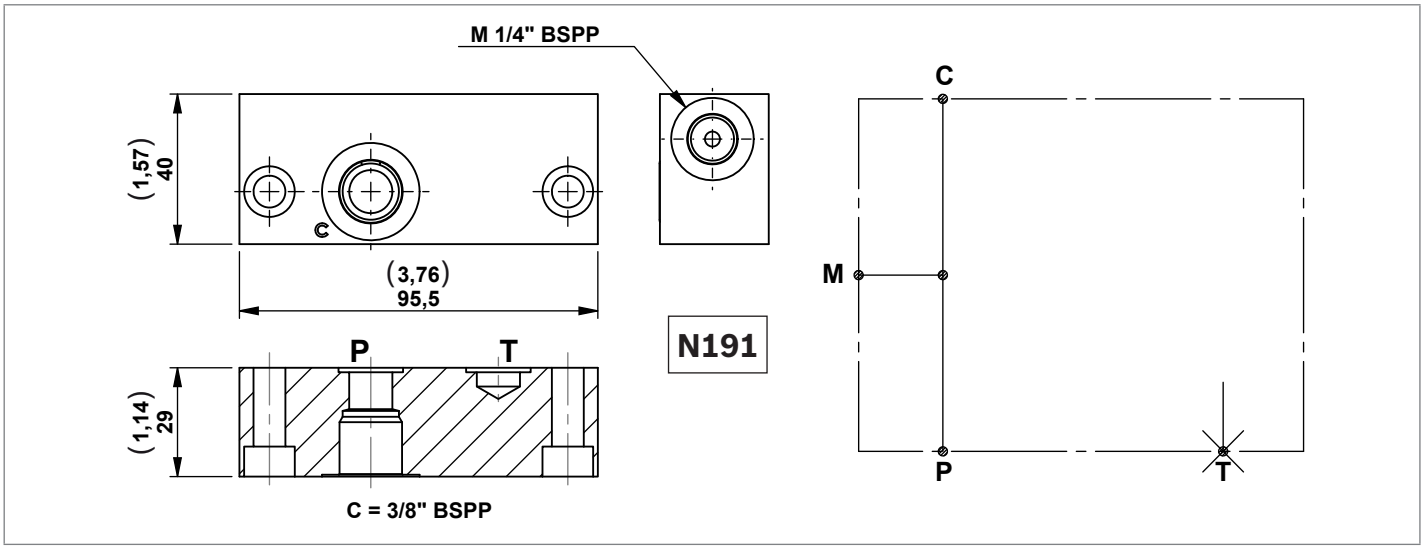


Modular blocks with threaded ports

Modular blocks with exit 3/8” BSPP.

Each block includes 2 OR 2056 gaskets.



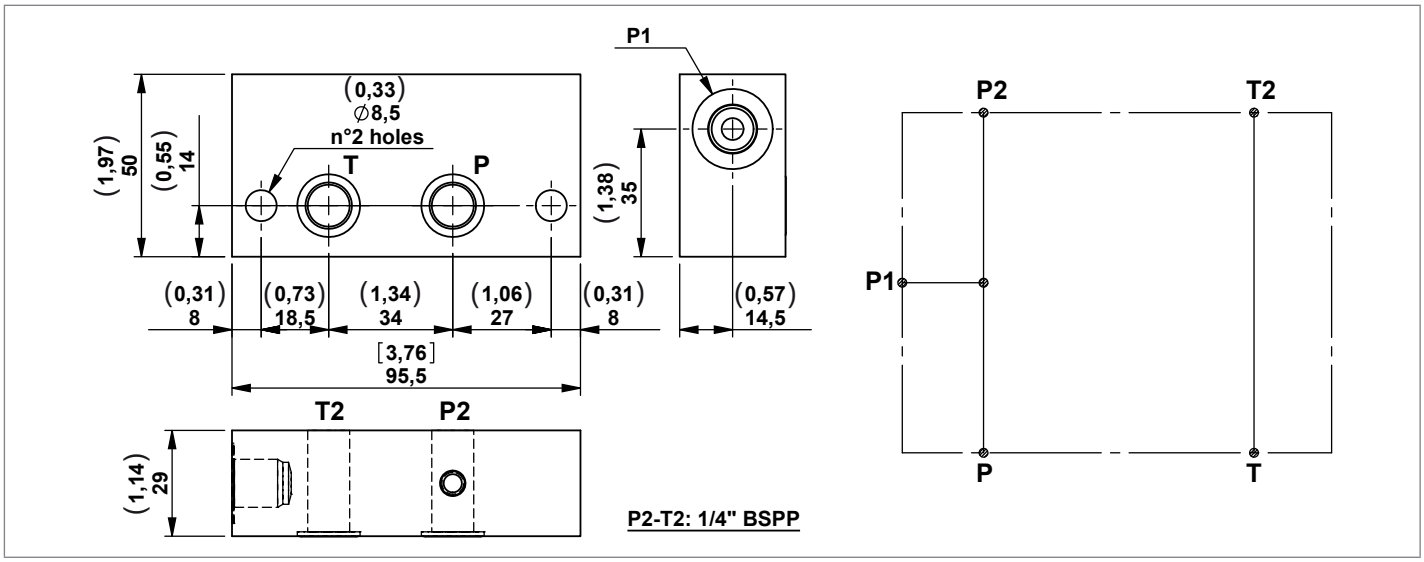


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N96	Modular block with threaded ports	300 (4351)	35 (9,25)	G386095000	R932001173
N191	Modular block with threaded ports	300 (4351)	35 (9,25)	G386191000	R932001284

Modular spacer block with extra “P1” port

A modular block with an extra port.

Each block includes 2 OR 2056 gaskets.

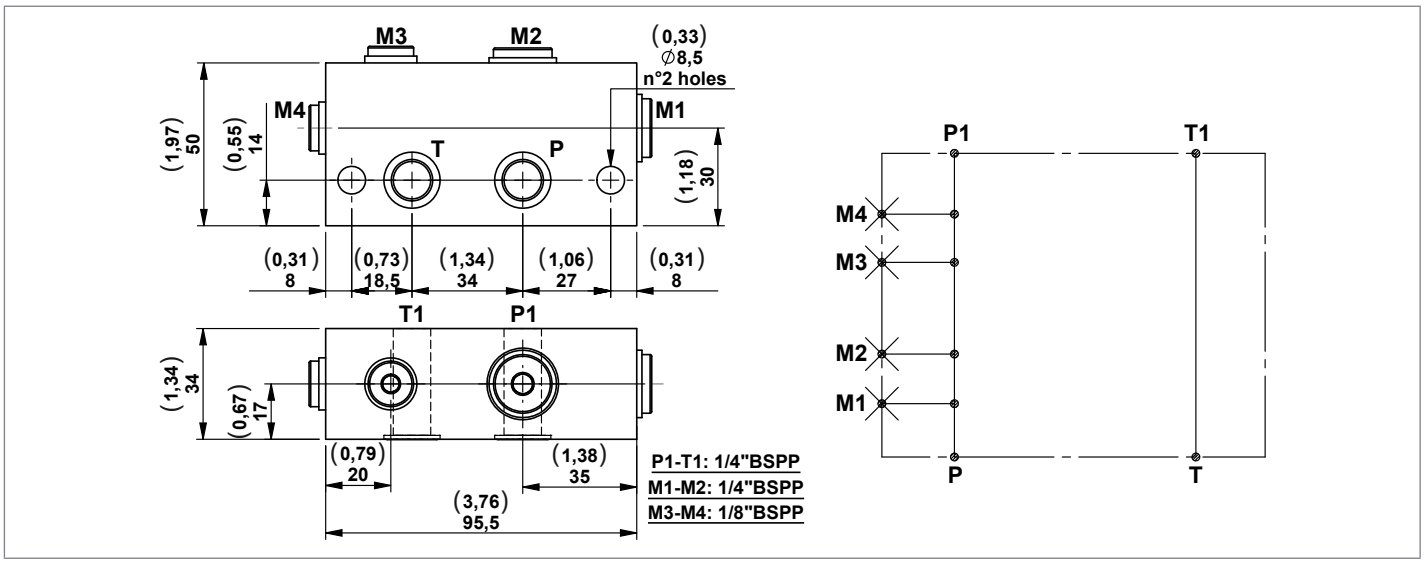


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N46-14	Modular spacer block with extra "P1" **port 1/4"** BSPP	300 (4351)	20 (5,28)	G386045000	R932001142
N46-38	Modular spacer block with extra "P1" **port 3/8"** BSPP	300 (4351)	20 (5,28)	1386000053	R932009506

Modular spacer block with two 1/8” BSPP and two 1/4” BSPP ports

A modular block with 4 extra ports.

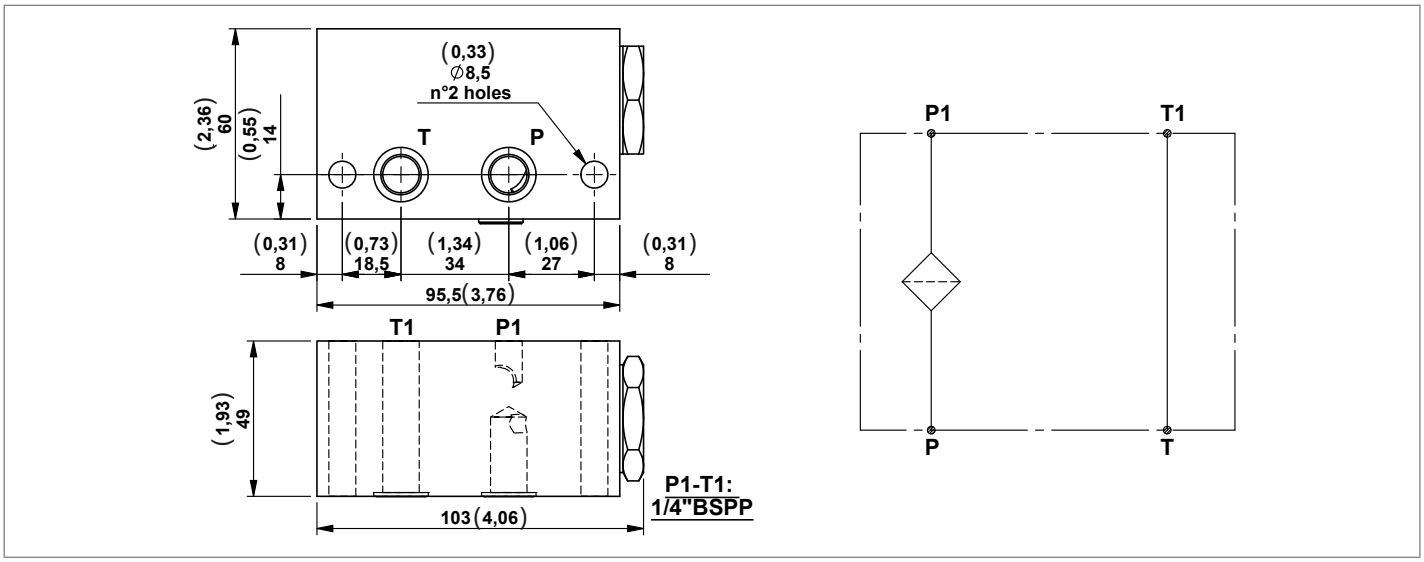
Each block includes 2 OR 2056 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N128	Modular spacer plock with two 1/8" BSPP ports and two 1/4" BSPP ports	300 (4351)	35 (9,25)	G386128000	R932001241

Modular block with filter on pressure line

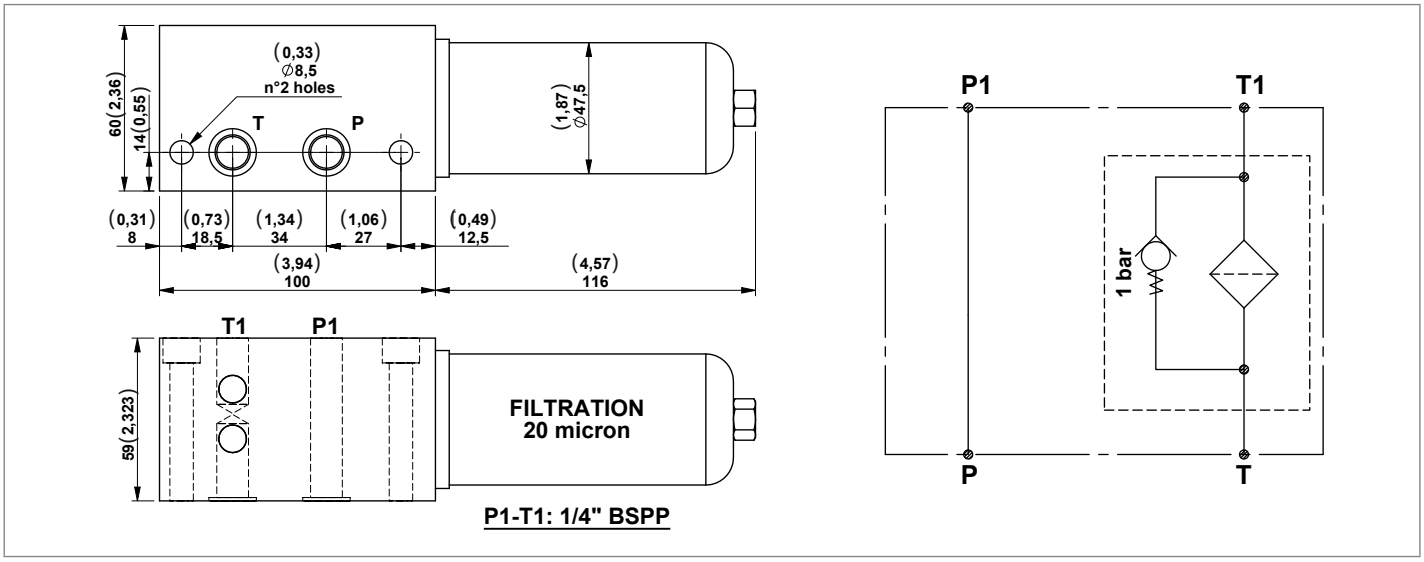
A modular block with a filter on the pressure line. This is recommended for applications where valve may be subjected to contamination.
Each block includes 2 OR 2056 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N39-25	Modular block with filter (**25 micron**) on pressure line	230 (3336)	10 (2,64)	G386038010	R932001123
N39-60	Modular block with filter (**60 micron**) on pressure line	230 (3336)	10 (2,64)	G386038020	R932001124

Modular block with filter on the return line

A modular block with filter on return line. This is recommended for applications where valves may be subjected to contamination.
Each block includes 2 OR 2056 gaskets.
By-pass valve set at a pressure of 1 bar.

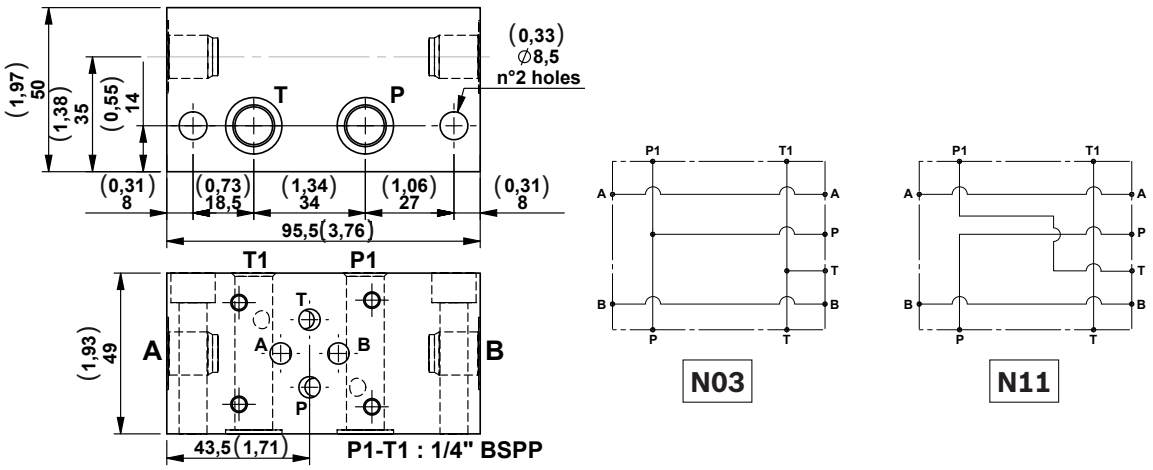


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N116	Modular block with filter on the return line (20 micron)	6 (87)	20 (5,28)	G386116010	R932001214

Modular block for CETOP 3 (2143) configuration valves

Modular blocks for CETOP 3 (2143) electrovalves for parallel or series circuits.

Each block includes 2 OR 2056 gaskets.

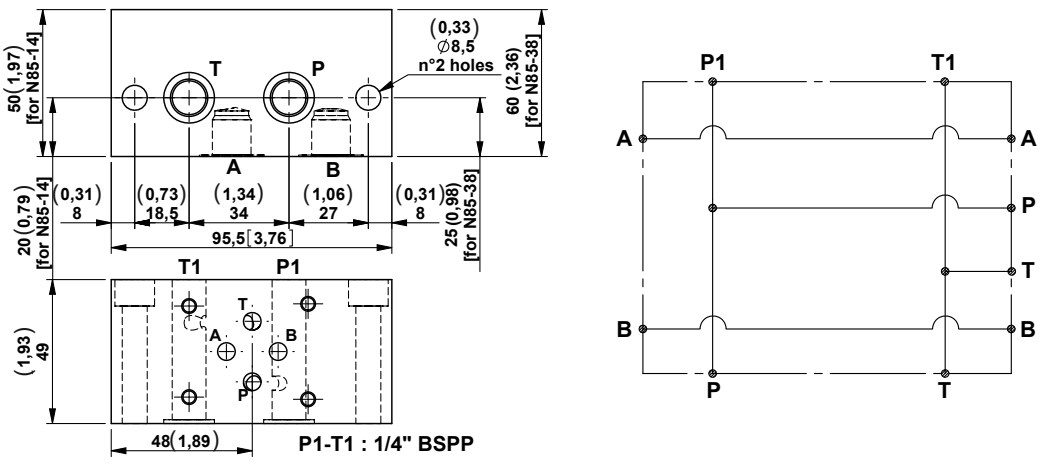


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N03-14	Modular block for CETOP3 (2143) configuration valves with A-B **1/4"** BSPP (**parallel circuit**)	300 (4351)	40 (10,57)	G386002010	R932001010
N03-38	Modular block for CETOP3 (2143) configuration valves with A-B **3/8"** BSPP (**parallel circuit**)	300 (4351)	40 (10,57)	G386002020	R932001011
N11-14	Modular block for CETOP3 (2143) configuration valves with A-B **1/4"** BSPP (**series circuit**)	300 (4351)	40 (10,57)	G386009010	R932001054
N11-38	Modular block for CETOP3 (2143) configuration valves with A-B **3/8"** BSPP (**series circuit**)	300 (4351)	40 (10,57)	G386009020	R932001056

Modular block for CETOP 3 (2143) configuration valves

A modular block that is for CETOP 3 (2143) electrovalves for a parallel circuit with ports on the oppsite side of the valve.

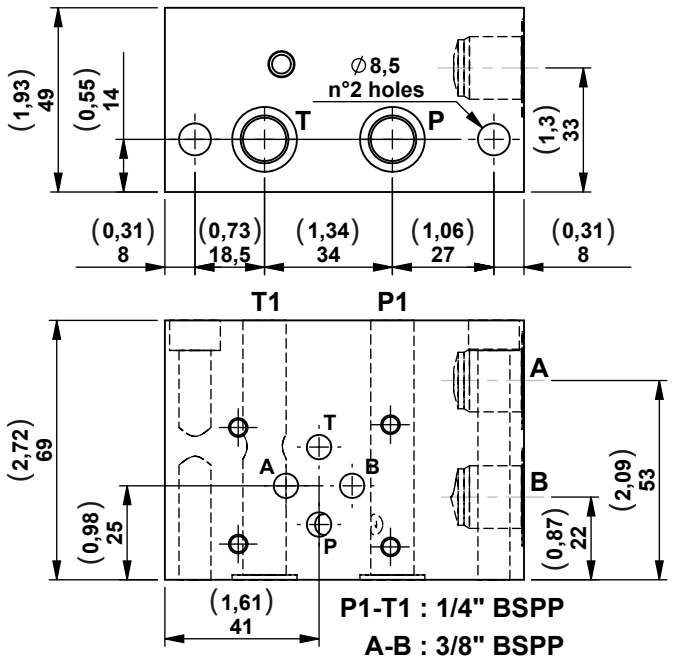
Each block includes 2 OR 2056 gaskets.

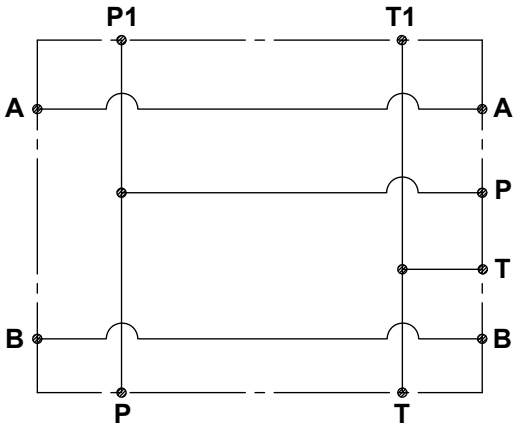


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N85-14	Modular block for CETOP3 (2143) configuration valves with A-B **1/4"** BSPP (parallel circuit)	300 (4351)	40 (10,57)	G386084010	R932001158
N85-38	Modular block for CETOP3 (2143) configuration valves with A-B **3/8"** BSPP (parallel circuit)	300 (4351)	40 (10,57)	G386084020	R932001159

Modular block for CETOP 3 (2143) configuration valves with side ports

A modular block that is for CETOP 3 (2143) electrovalves for parallel circuit with side device ports on one face.
Each block includes 2 OR 2056 gaskets.





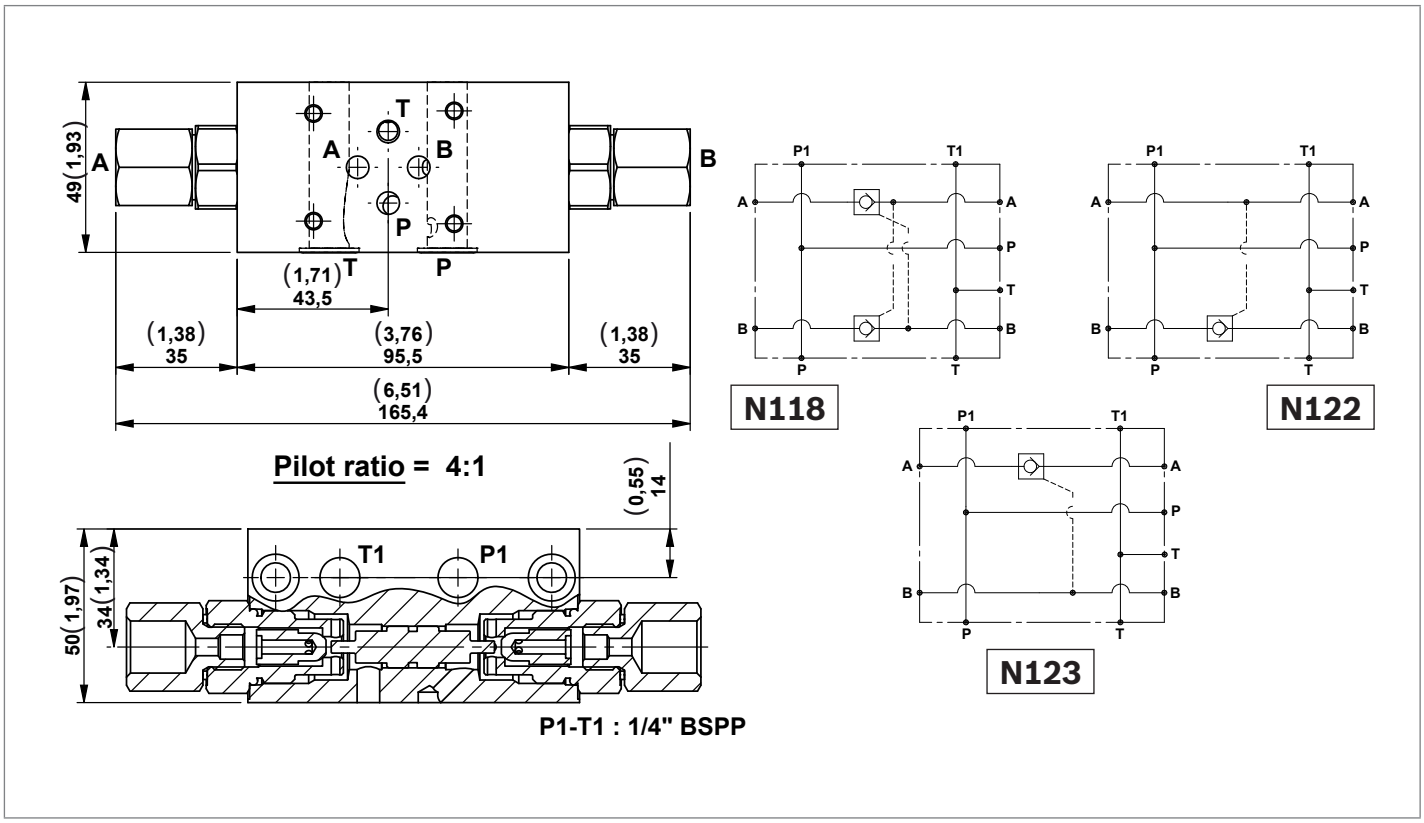
Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N142	Modular block for CETOP 3 (2143) confuguration valves with side ports	300 (4351)	40 (10,57)	G386142000	R932001252

Modular block with poppet type P.O. check valves for CETOP 3 (2143) configuration valves (parallel circuit)

A selection of modular block with P.O. check valves for block CETOP 3 (2143) electrovalves.

Each block includes 2 OR 2056 gaskets.

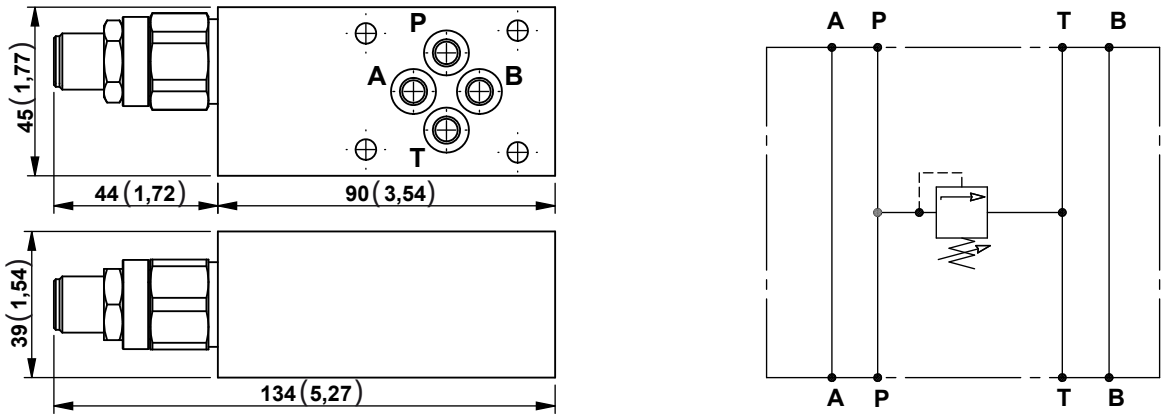
Possibility to have an OR gasket on the piloting piston for application with low flow.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N118-38	Modular block with poppet type P.O. check valves on A-B for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **3/8"** BSPP)	300 (4351)	20 (5,28)	G386118A02	R932001217
N118G-38	Modular block with poppet type P.O. check valves on A-B for CETOP 3 (2143) configuration valves (**with O-ring** on pilot piston and A-B **3/8"** BSPP)	300 (4351)	20 (5,28)	G386118B02	R932001222
N118-14	Modular block with poppet type P.O. check valves on A-B for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **1/4"** BSPP)	300 (4351)	20 (5,28)	G386118A03	R932001218
N118G-14	Modular block with poppet type P.O. check valves on A-B for CETOP 3 (2143) configuration valves (**with O-ring** on pilot piston and A-B **1/4"** BSPP)	300 (4351)	20 (5,28)	G386118B03	R932001223
N122-38	Modular block with poppet type P.O. check valve on B for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **3/8"** BSPP)	300 (4351)	20 (5,28)	G386122A02	R932001233
N122-14	Modular block with poppet type P.O. check valve on B for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **1/4"** BSPP)	300 (4351)	20 (5,28)	G386122A01	R932001232
N123-38	Modular block with poppet type P.O. check valves on A for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **3/8"** BSPP)	300 (4351)	20 (5,28)	G386123A02	R932001237
N123-14	Modular block with poppet type P.O. check valves on A for CETOP 3 (2143) configuration valves (**without O-ring** on pilot piston and A-B **1/4"** BSPP)	300 (4351)	20 (5,28)	G386123A01	R932001236

Sandwich blocks with poppet type “VM25“ relief valves for CETOP 3 (2143) configuration valves

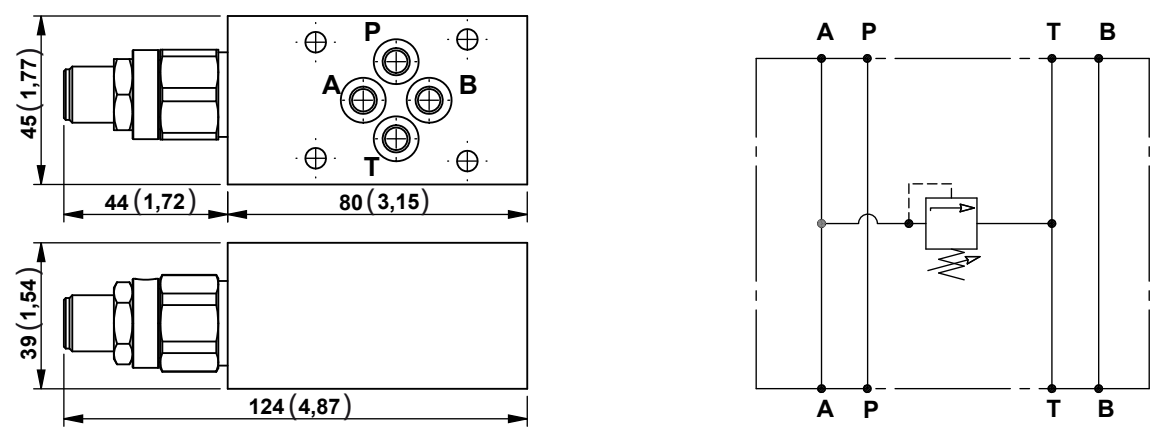
Each block includes 4 OR 108 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N99-10	Sandwich block with poppet type "VM25" relief valve P in T (**10-100 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386098A81	R932001174
N99-20	Sandwich block with poppet type "VM25" relief valve P in T (**40-200 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386098A82	R932001175
N99-35	Sandwich block with poppet type "VM25" relief valve P in T (**70-350 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386098A83	R932001176

Sandwich blocks with poppet type “VM25“ relief valves for CETOP 3 (2143) configuration valves

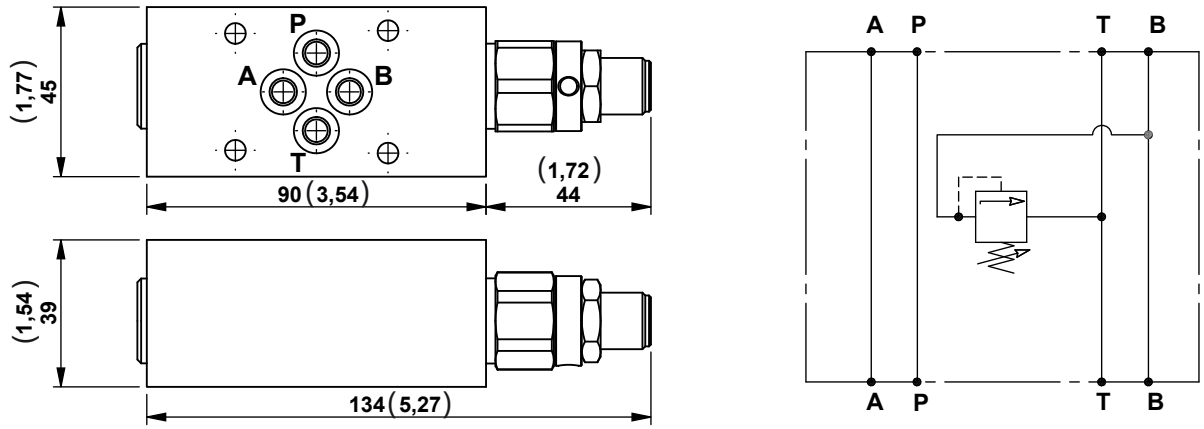
Each block includes 4 OR 108 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N100-05	Sandwich block with poppet type "VM25" relief valve A in T (**5-50 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386099A84	R932001183
N100-10	Sandwich block with poppet type "VM25" relief valve A in T (**10-100 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386099A81	R932001180
N100-20	Sandwich block with poppet type "VM25" relief valve A in T (**40-200 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386099A82	R932001181
N100-35	Sandwich block with poppet type "VM25" relief valve A in T (**70-350 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386099A83	R932001182

Sandwich blocks with poppet type “VM25“ relief valves for CETOP 3 (2143) configuration valves

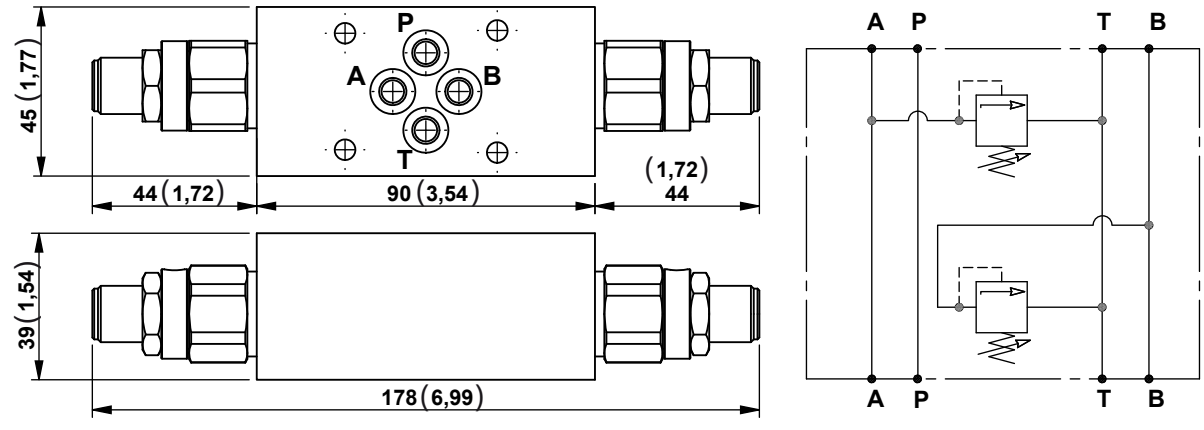
Each block includes 4 OR 108 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N101-05	Sandwich block with poppet type "VM25" relief valve B in T (**5-50 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386101A84	R932001191
N101-10	Sandwich block with poppet type "VM25" relief valve B in T (**10-100 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386101A81	R932001188
N101-20	Sandwich block with poppet type "VM25" relief valve B in T (**40-200 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386101A82	R932001189
N101-35	Sandwich block with poppet type "VM25" relief valve B in T (**70-350 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386101A83	R932001190

Sandwich blocks with poppet type “VM25“ relief valves for CETOP 3 (2143) configuration valves

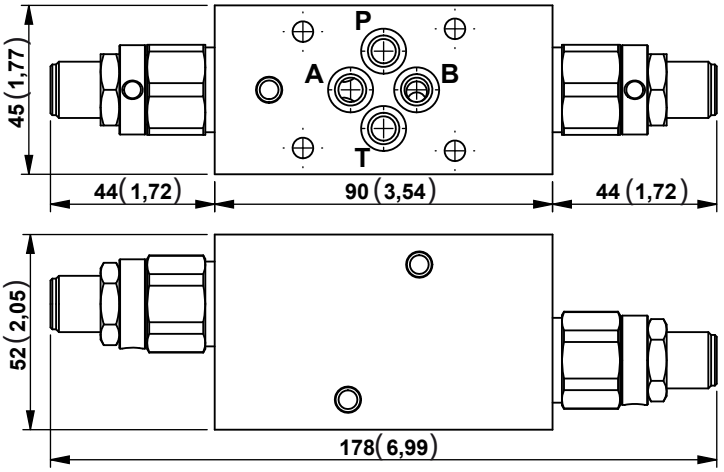
Each block includes 4 OR 108 gaskets.

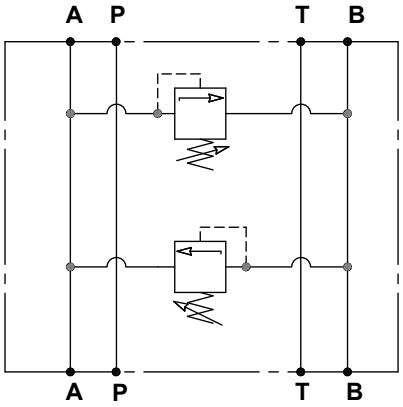


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N102-05	Sandwich block with poppet type "VM25" relief valves A-B in T (**5-50 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386102A84	R932001200
N102-10	Sandwich block with poppet type "VM25" relief valves A-B in T (**10-100 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386102A81	R932001196
N102-20	Sandwich block with poppet type "VM25" relief valves A-B in T (**40-200 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386102A82	R932001198
N102-35	Sandwich block with poppet type "VM25" relief valves A-B in T (**70-350 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386102A83	R932001199

Sandwich blocks with poppet type “VM25“ relief valves for CETOP 3 (2143) configuration valves

Each block includes 4 OR 108 gaskets.

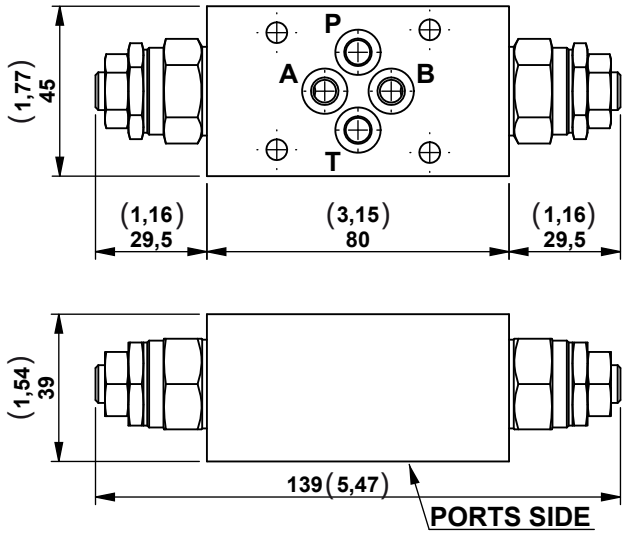


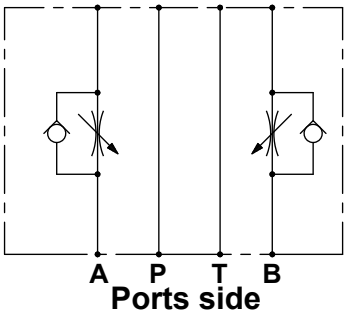


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N103-10	Sandwich block with poppet type "VM25" relief valves A in B and B in A (**10-100 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386103A81	R932001202
N103-20	Sandwich block with poppet type "VM25" relief valves A in B and B in A (**40-200 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386103A82	R932001203
N103-35	Sandwich block with poppet type "VM25" relief valves A in B and B in A (**70-350 bar**) for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386103A83	R932001204

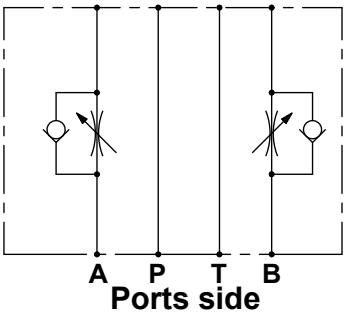
Sandwich blocks with “ST-CU-06” adjustable flow control valves for CETOP 3 (2143) configuration valves

Each block includes 4 OR 108 gaskets.





N78

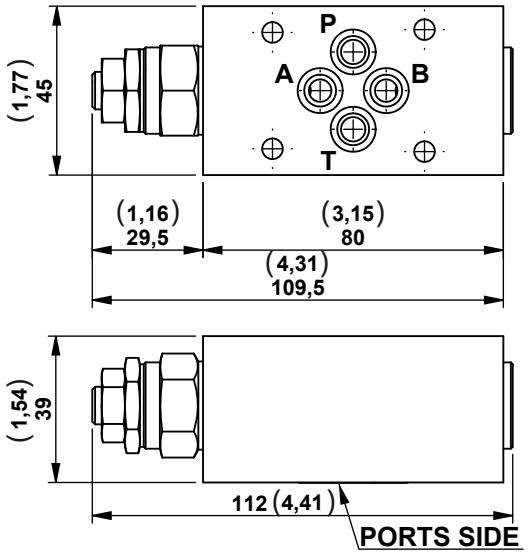


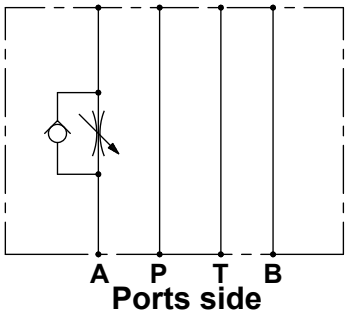
N104

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N78	Sandwich blocks with ST-CU-06 adjustable flow control valves (that **working on the return to the tank** of the A and B line) for CETOP 3 (2143) configuration valves	300 (4351)	25 (6,60)	G386077A81	R932001156
N104	Sandwich blocks with ST-CU-06 adjustable flow control valves (that **working on the delivery** of the A and B line) for CETOP 3 (2143) configuration valves	300 (4351)	25 (6,60)	G386104A80	R932001205

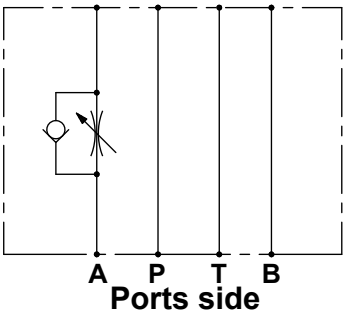
Sandwich blocks with “ST-CU-06” adjustable flow control valves for CETOP 3 (2143) configuration valves

Each block includes 4 OR 108 gaskets.





N105

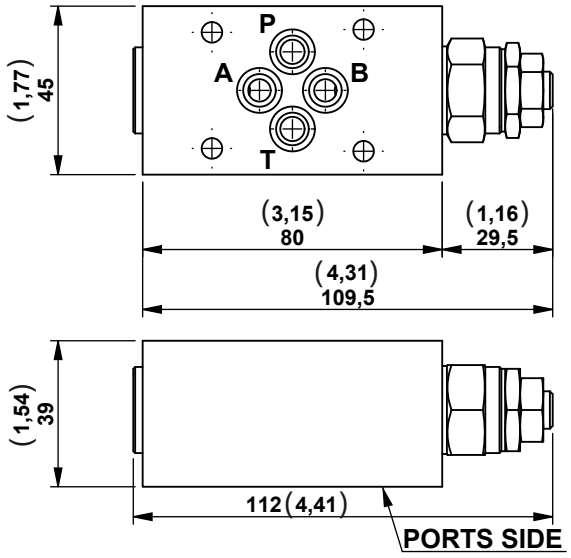


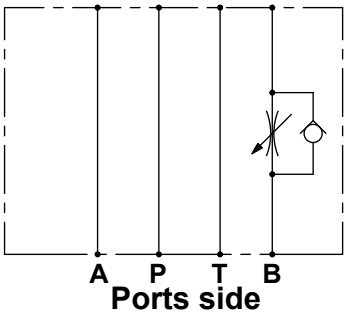
N107

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N105	Sandwich blocks with ST-CU-06 adjustable flow control valves (that **working on the return to the tank** of the A line) for CETOP 3 (2143) configuration valves	300 (4351)	25 (6,60)	G386105A81	R932000183
N107	Sandwich blocks with ST-CU-06 adjustable flow control valves (that **working on the delivery** of the A line) for CETOP 3 (2143) configuration valves	300 (4351)	25 (6,60)	G386107A80	R932001211

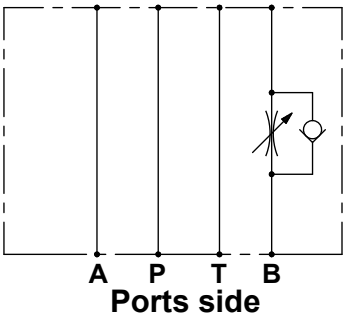
Sandwich blocks with “ST-CU-06” adjustable flow control valves for CETOP 3 (2143) configuration valves

Each block includes 4 OR 108 gaskets.





N106

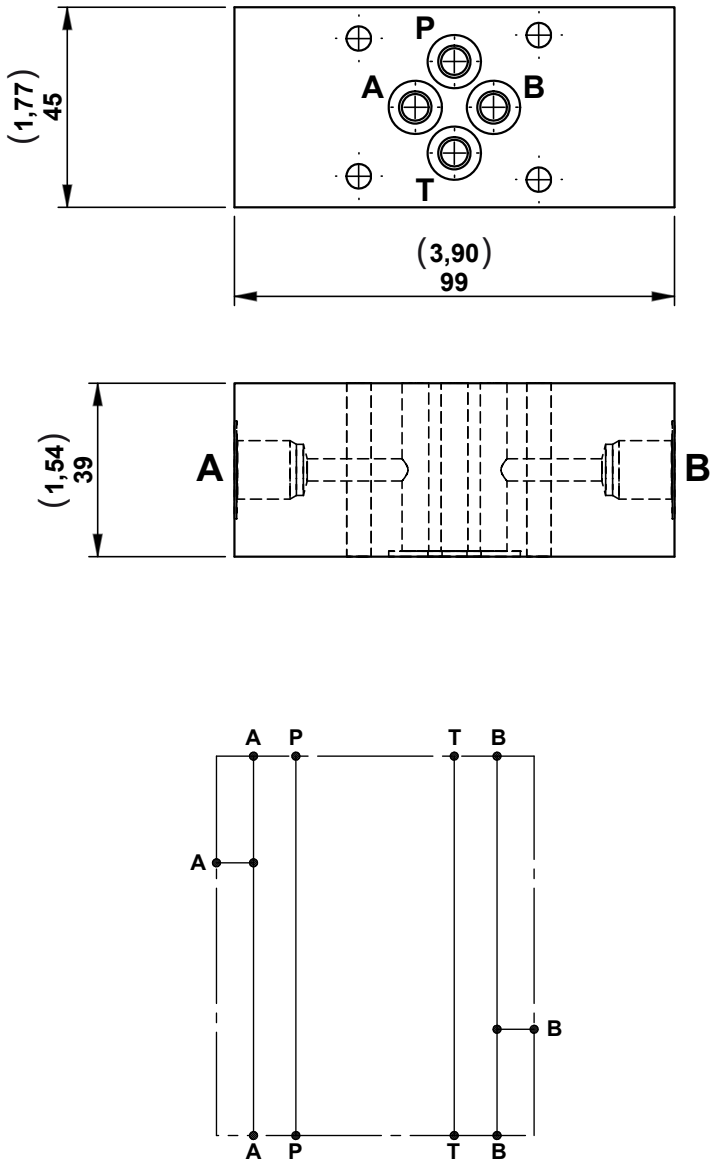


N108

Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N106	Sandwich blocks with ST-CU-06 adjustable flow control valves (that **working on the return to the tank** of the B line) for CETOP 3 (2143) configuration valves	300 (4351)	25 (6,60)	G386106A81	R932000184
N108	Sandwich blocks with ST-CU-06 adjustable flow control valves (that **working on the delivery** of the B line) for CETOP 3 (2143) configuration valves	300 (4351)	25 (6,60)	G386108A80	R932001212

Sandwich block with ports on “A” and “B” line for CETOP 3 (2143) configuration valves

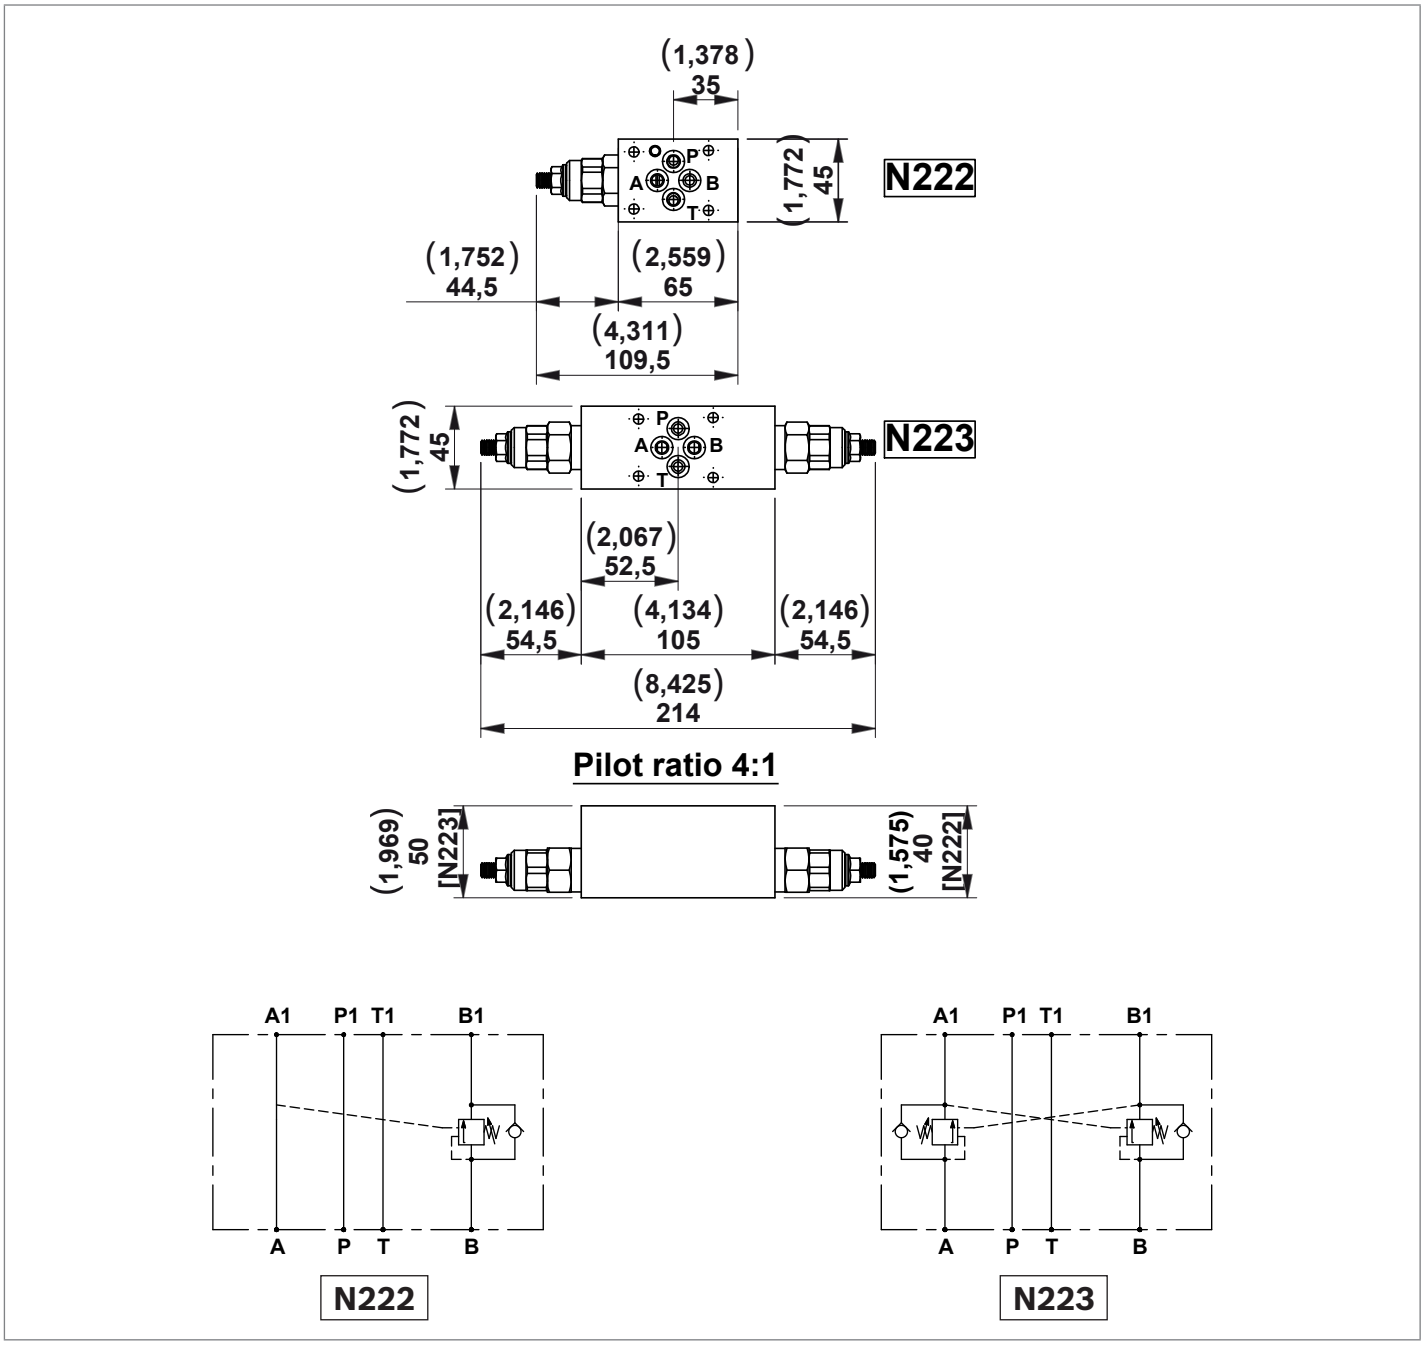
Each block includes 2 OR 2056 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N19-14	Sandwich block with **1/4"** BSPP ports on A and B line for CETOP3 (2143) configuration valves	300 (4351)	25 (6,60)	G386018010	R932001091

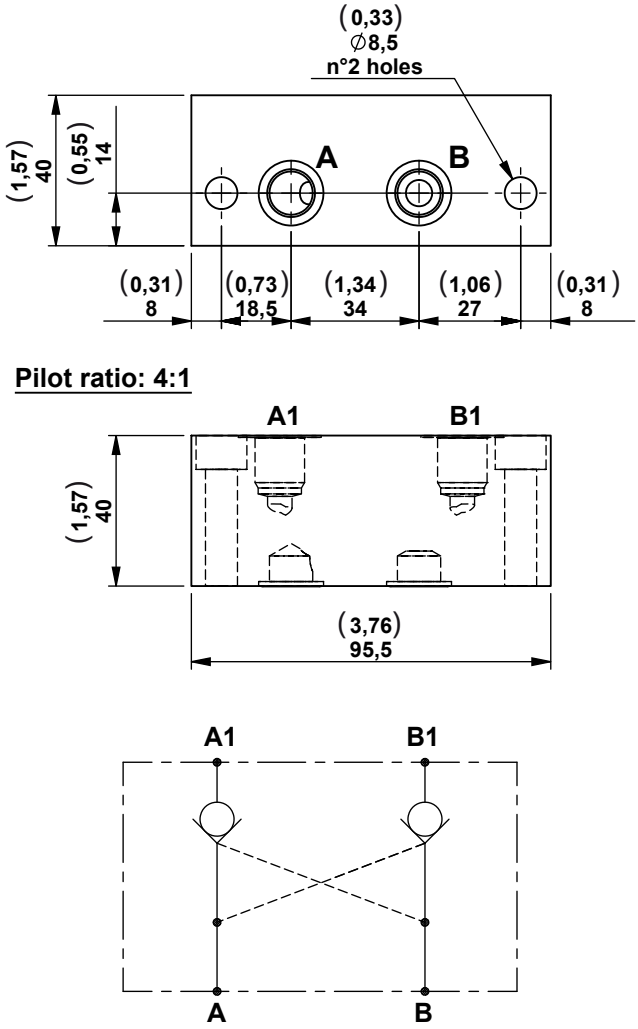
Sandwich blocks with overcenter valves for CETOP 3 (2143) configuration valves

Each block includes 4 OR 108 gaskets.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N222.20	Sandwich block with Overcentre valve VBSN-08AA (**100-210 bar**) **on B** line for CETOP3	300 (4351)	30 (7,93)	G386222002	R932001326
N222.35	Sandwich block with Overcentre valve VBSN-08AA (**200-350 bar**) **on B** line for CETOP3	300 (4351)	30 (7,93)	G386222003	R932001327
N223.20	Sandwich block with Overcentre valves VBSN-08AA (**100-210 bar**) **on A and B** line for CETOP3	300 (4351)	30 (7,93)	G386223002	R932001329
N223.35	Sandwich block with Overcentre valves VBSN-08AA (**200-350 bar**) **on A and B** line for CETOP3	300 (4351)	30 (7,93)	G386223003	R932001330

Block with pilot operated check valves on A and B line, only for manifolds KE type code M21-M25

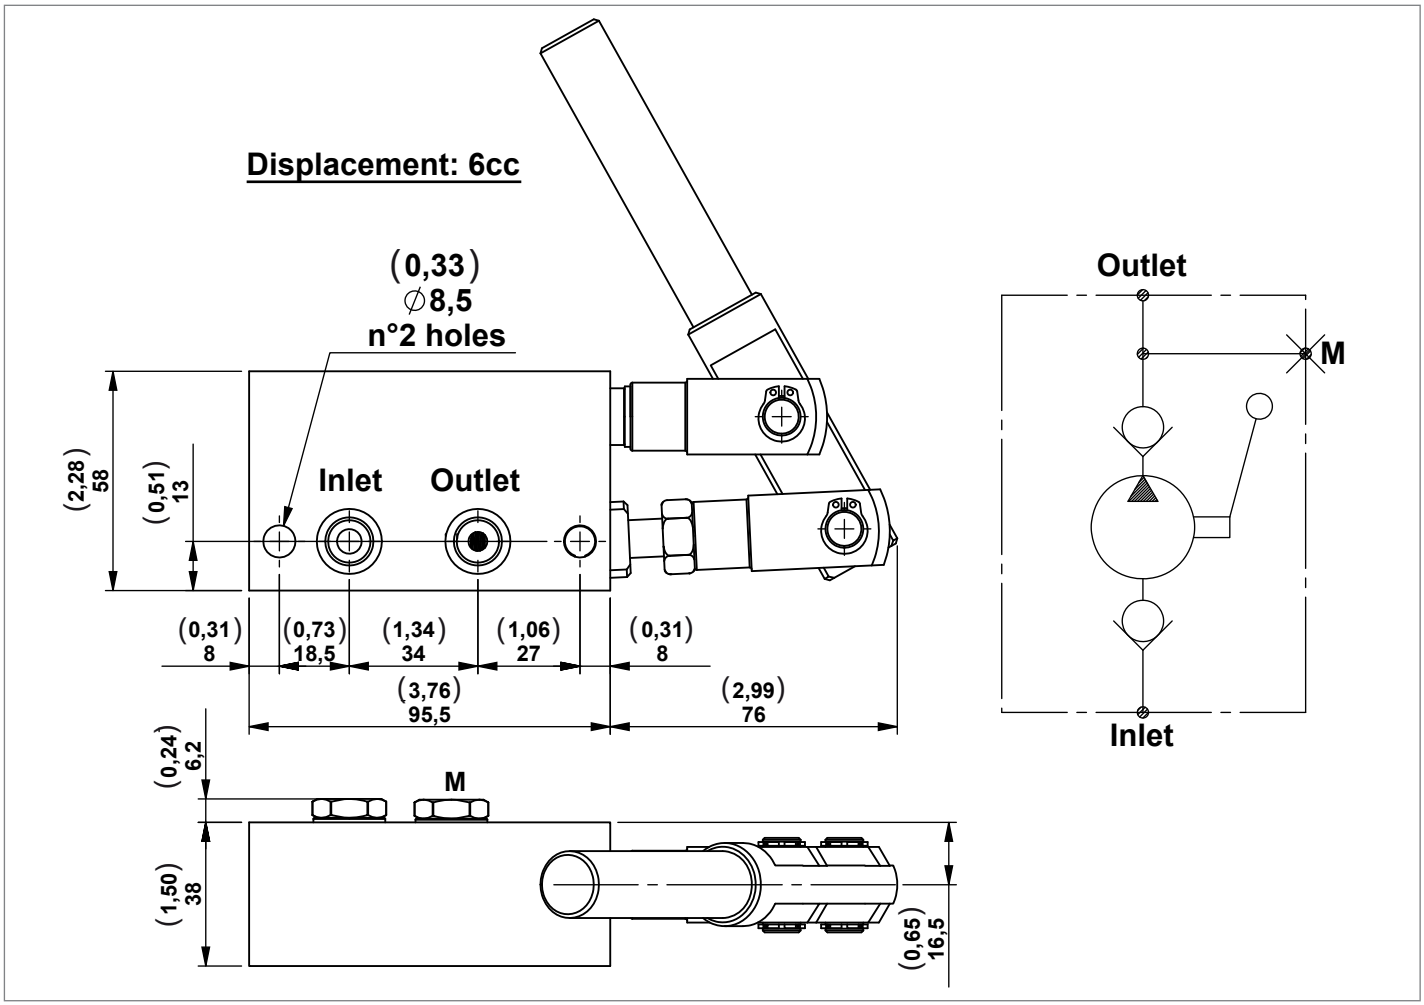


Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N221-14	Block with pilot operated check valves with ports A1-B1 **1/4" BSPP**	210 (3046)	12 (3,17)	G386221001	R932001325
N221-916	Block with pilot operated check valves with ports A1-B1 **SAE 9/16"**	210 (3046)	12 (3,17)	G386221000	R932001324

Modular hand pump manifold block

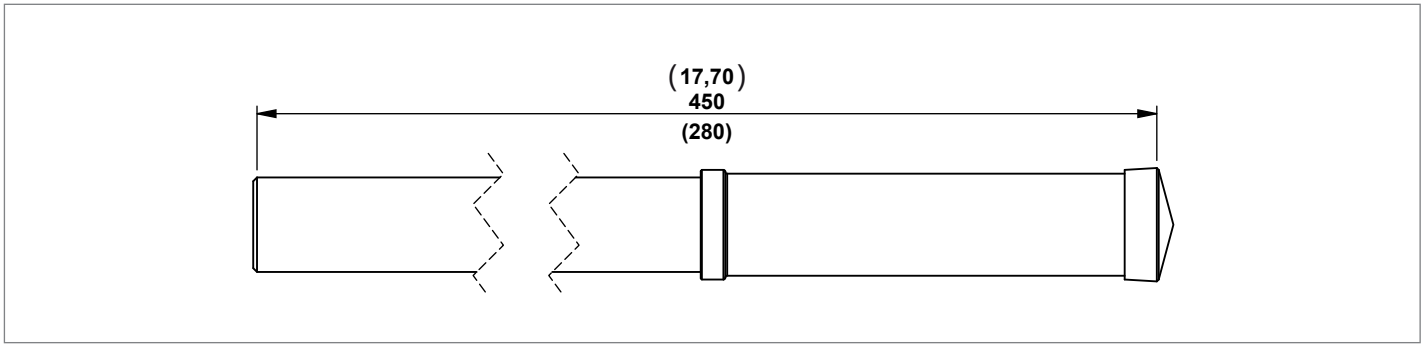
A single acting hand pump usually used for emergency.

Each block includes 5 OR 2050 gaskets.



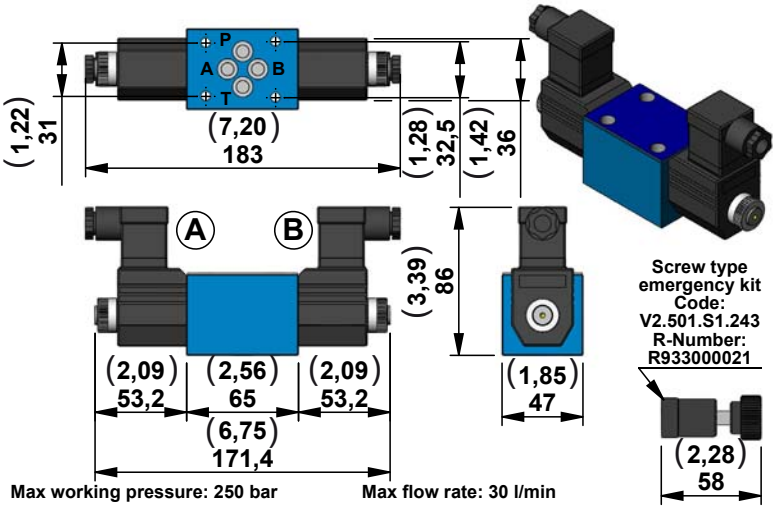
Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
N22	Modular hand pump manifold block	350 (5076)	-	G386021010	R932001093

Lever Kit



Description	Type	Material number
Lever L= 450	K250133000	R932002452
Lever L= 280	K2501S1058	R932002407

CETOP 2143 [Ø6mm (0,24inch)] Solenoid Valves



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Material number	Diagram

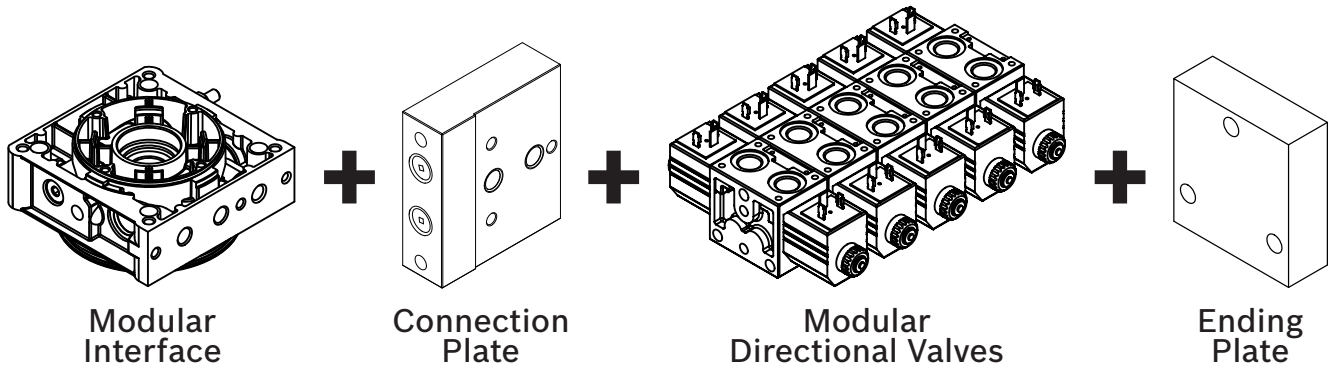
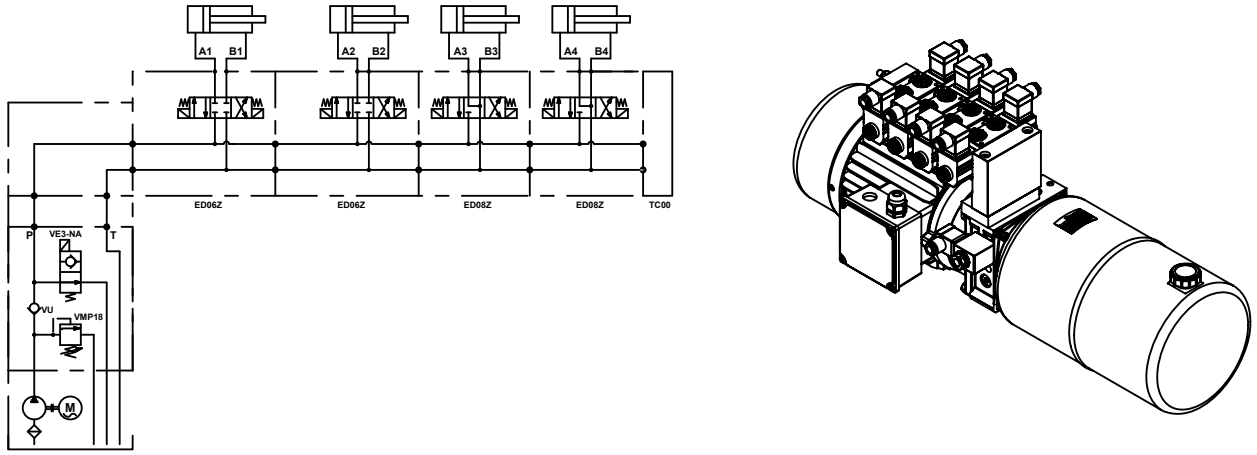
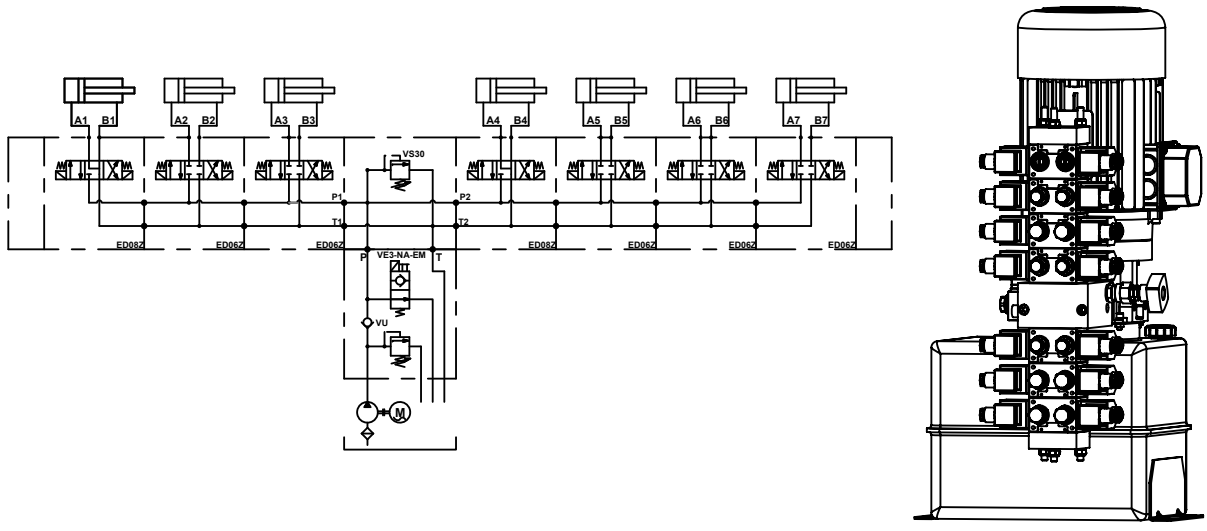
Design



Horizontal Example



CETOP 2143 [Ø6mm (0,24inch)] Solenoid Valves



Note
Please contact our Sales Department for further information.

Modular blocks with two lowering solenoid valves, check valves, and compensated flow control throttle valves (available upon request)

Modular blocks to operate a single acting cylinder in a parallel circuit or a double acting cylinder in regenerative.

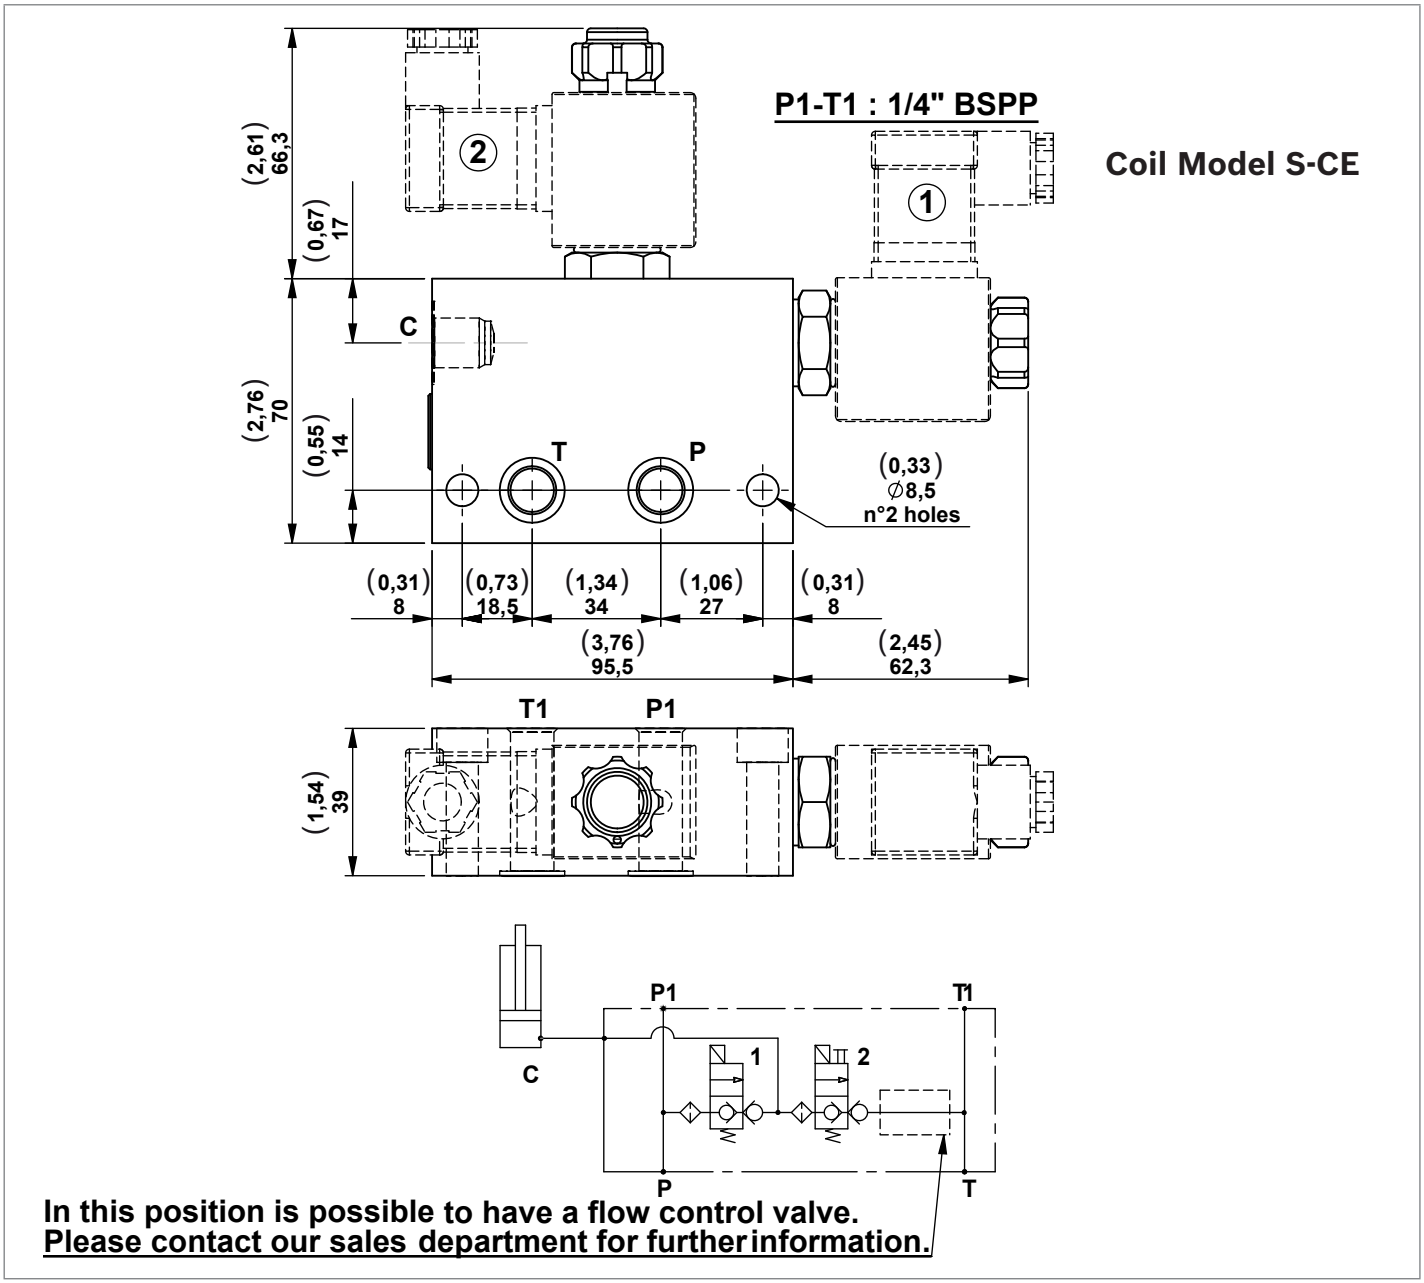
Each block includes 2 OR 2056 gaskets.

Minimum voltage required: 90% of nominal.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 72.

For the selection of connectors please refer to page 75.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V07-14	Modular block with 2 VE3-NC-VU with "C" port **1/4"** BSPP	250 (3626)	25 (6,60)	G386507010DC	R932001406
V07-38	Modular block with 2 VE3-NC-VU with "C" port **3/8"** BSPP	250 (3626)	25 (6,60)	G386507020DC	R932009707

Modular blocks with four way three position solenoid valve. Spool type

A selection of modular blocks with 4/3 spool type solenoid valve for small double acting cylinders.

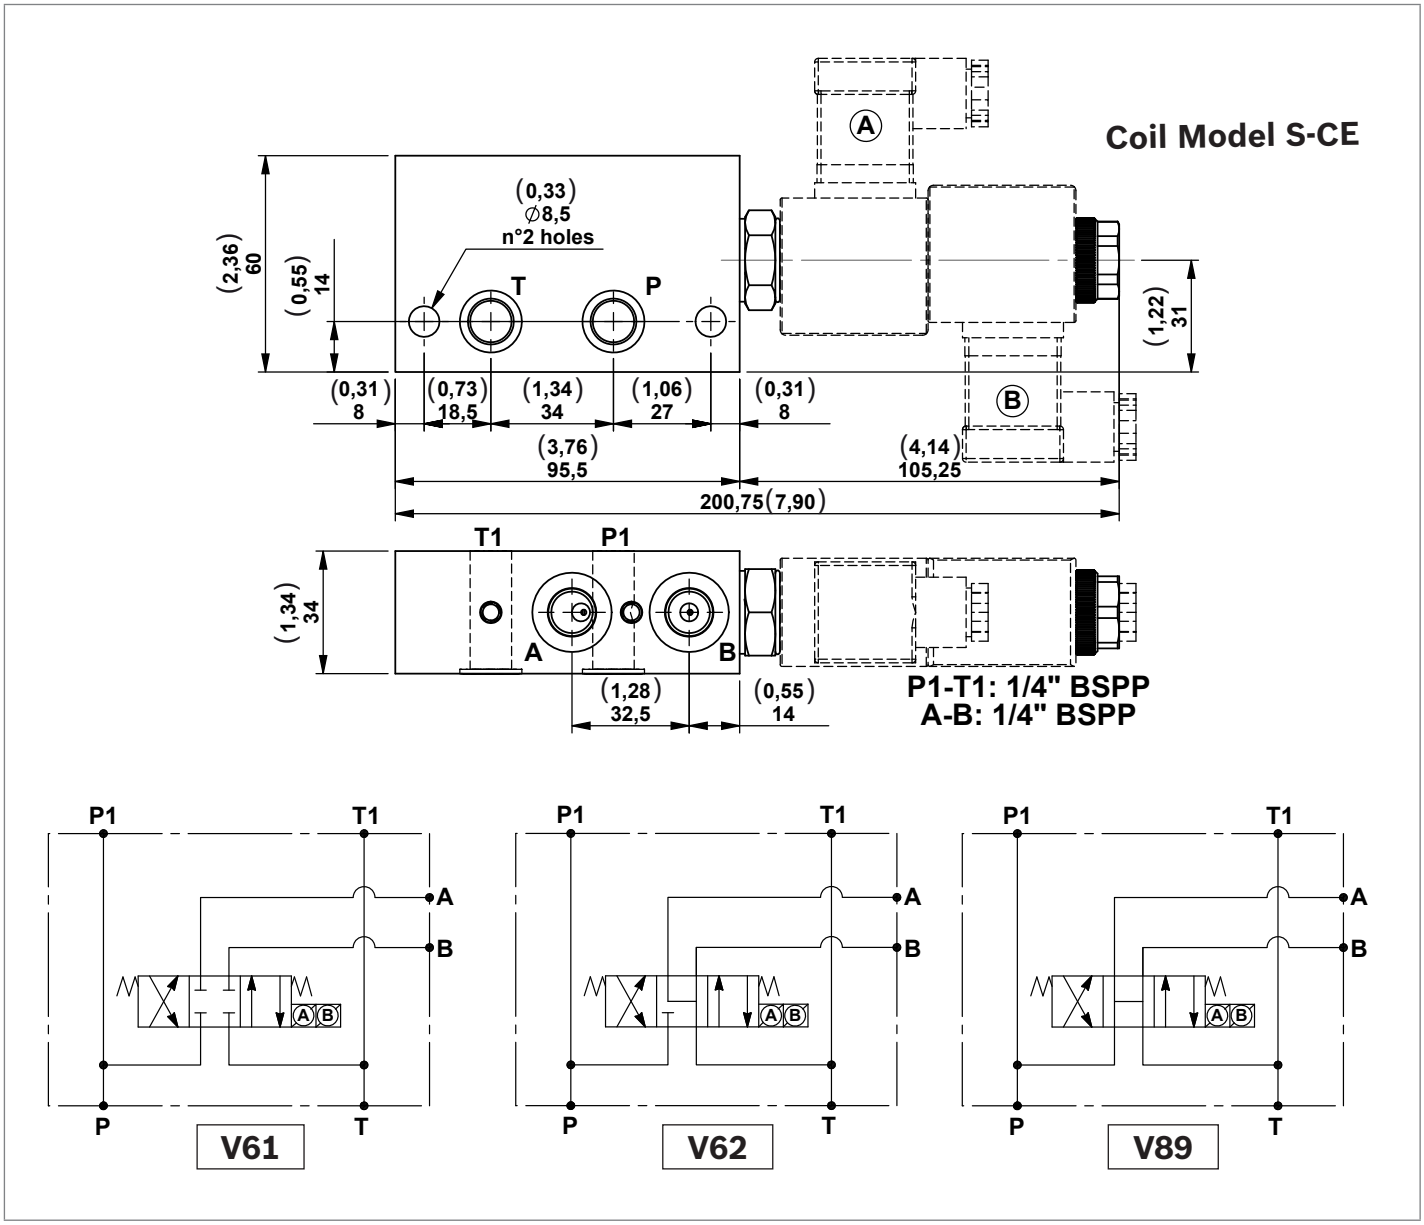
Each block includes 2 OR 2056 gaskets.

Minimum voltage required: 90% of nominal.

Coils not included, must be ordered separately.

For the selection of coil model and voltage please refer to page 72.

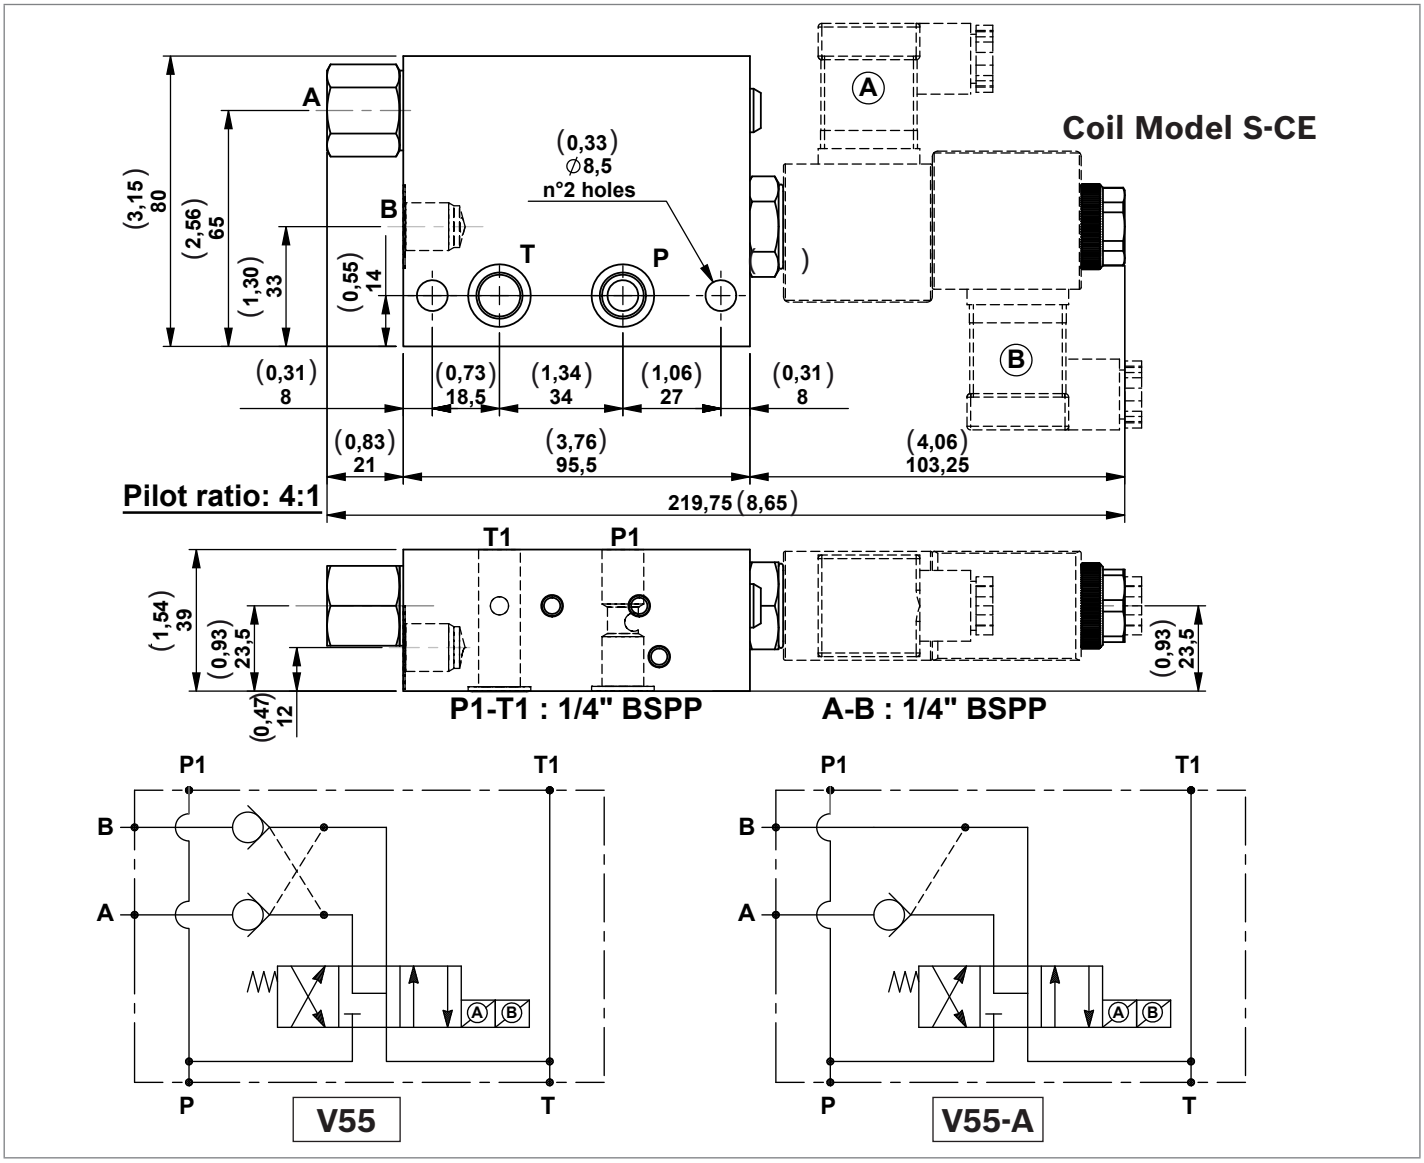
For the selection of connectors please refer to page 75.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V61	Modular block with 4 way 3 position solenoid valve (V4.3A)	210 (3046)	8 (2,11)	G386562010	R932001552
V62	Modular block with 4 way 3 position solenoid valve (V4.3B)	210 (3046)	8 (2,11)	G386563010	R932001556
V89	Modular block with 4 way 3 position solenoid valve (V4.3C)	210 (3046)	8 (2,11)	G386590010	R932001580

Modular block with four way three position solenoid valve and P.O. check valves on “A” and “B” line

A modular block with 4/3 spool type solenoid valve and P.O. check valves on “A” and “B” line. For small double acting cylinders.
Each block includes 2 OR 2056 gaskets.
Minimum voltage required: 90% of nominal.
Coils not included, must be ordered separately.
For the selection of coil model and voltage please refer to page 72.
For the selection of connectors please refer to page 75.



Code	Description	Max working pressure bar (psi)	Max flow l/min (gpm)	Type	Material number
V55	Modular block with 4 way 3 position solenoid valve and P.O. check valves on A and B **without O-Ring on pilot piston**	210 (3046)	8 (2,11)	G386591A10	R932001584

Modular block with four way three position solenoid valve and P.O. check valves on “A” and “B” line

A modular block with 4/3 spool type solenoid valve and P.O. check valves on “A” and “B” line. For small double acting cylinders.
Each block includes 2 OR 2056 gaskets.
Minimum voltage required: 90% of nominal.
Coils not included, must be ordered separately.
For the selection of coil model and voltage please refer to page 72.
For the selection of connectors please refer to page 75.

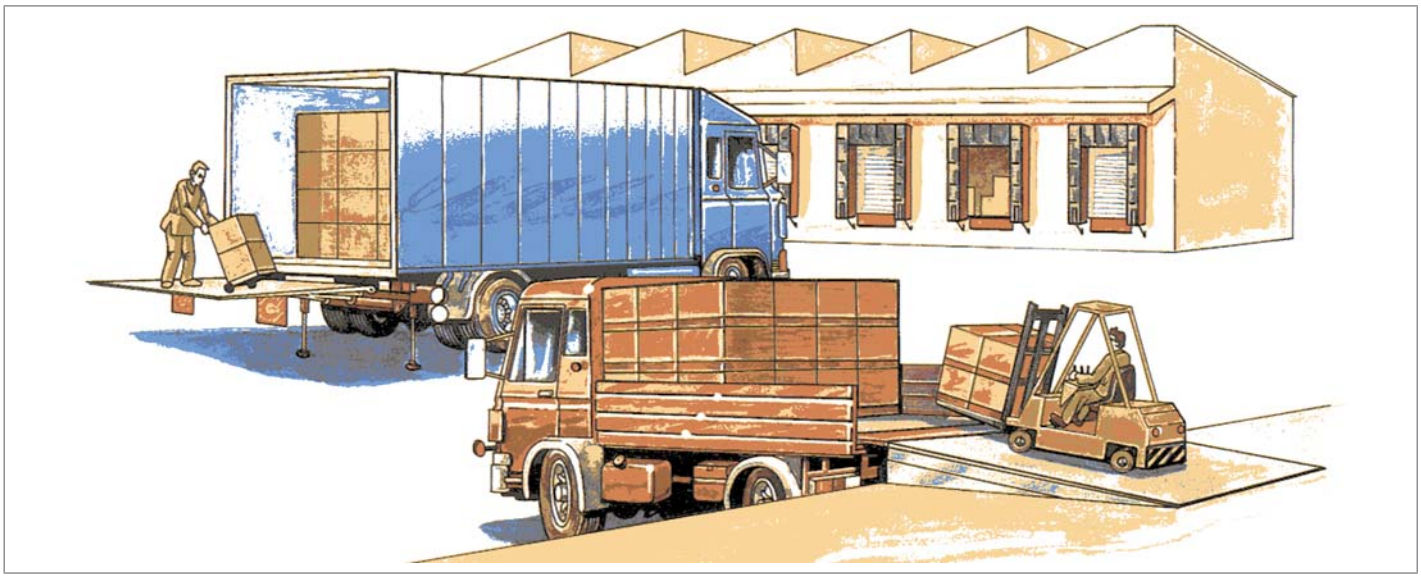
General Technical Data for Compact Power Module DL

Application description:

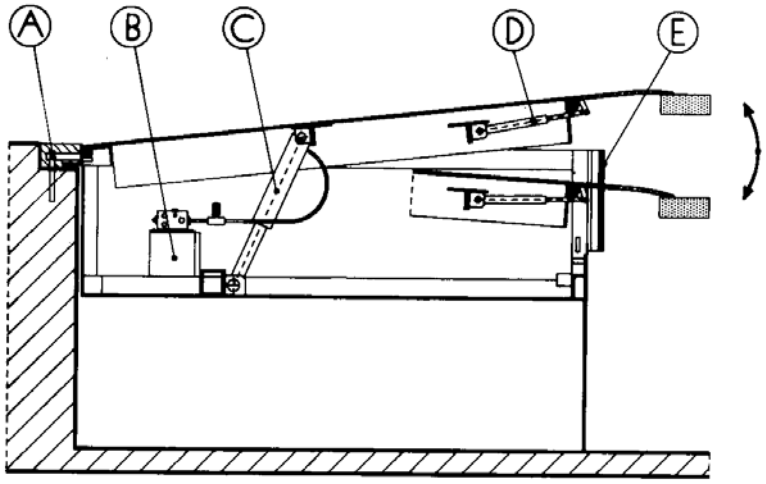
A Dock leveller is a structure which is typically fixed at the doors of the warehouse to load/unload goods. It's used as a crossing bridge by Forklift, Transpallet etc, between the floor of the warehouse and the truck. (Picture 1)



Picture 1 (Example of dock leveller)

Hydraulic system description:

In a Dock leveller the hydraulic system is characterized by a main single acting cylinder C (in some case 2 single acting cylinders connect to the same ports of the compact power module) for the lifting function and a single acting cylinder to move the lip D in case of Dock leveller with a hinged lip (picture 2-3) or a double acting cylinder in case of Dock leveller with a telescopic lip. (Picture 4)



Picture 2 (typical Hydraulic Dock leveller scheme)

A) Dock leveller anchorage
B) Compact Power Module
C) Single acting cylinder to lift the dock leveller
D) Lip movement cylinder
E) Rubber protection

How the system works:

Hydraulic Dock leveller with Single acting cylinders hinged lip (Picture 3)

Lifting phase: By switching on the electric motor, the gear pump pushes oil into the system and with the raising of the pressure the V4 valve changes over giving the possibility for the oil to push the main lifting cylinder connected to the port C/A; The solenoid valve V1 must always be energized or the system doesn't work.

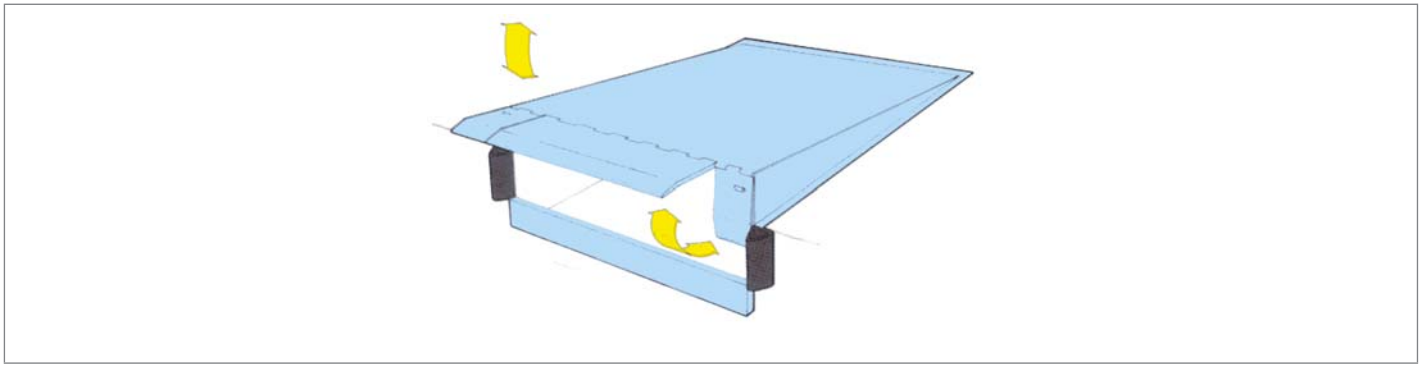
When the main lifting cylinder arrives at the end of the run, the pressure increases and allows for the opening of the V2 sequence valve that starts to put oil into the hinged lip single acting cylinder connected to the port B; The opening speed is set by the dimension of the orifice Ø....

Lowering phase: By stopping the electric motor, the V4 valve changes over on to the normal position, so the oil goes to the return line, crossing the V1 and through the throttle valve DV1 which maintains a backpressure on the system that causes the changing over of the V3 valve that guarantees a backpressure on the lip single acting cylinder and for this reason the lip remains lifted while the main single acting cylinder lowers down. When the main singleacting cylinder stops lowering, leaning on the truck, the pressure on the system is out and automatically the V3 valve goes on the normal position, allowing the oil to run on the return line and allowing the lip to lean on to the track. The Dock leveller remains free to swing to compensate the differences on the truck level during the loading/unloading operations.

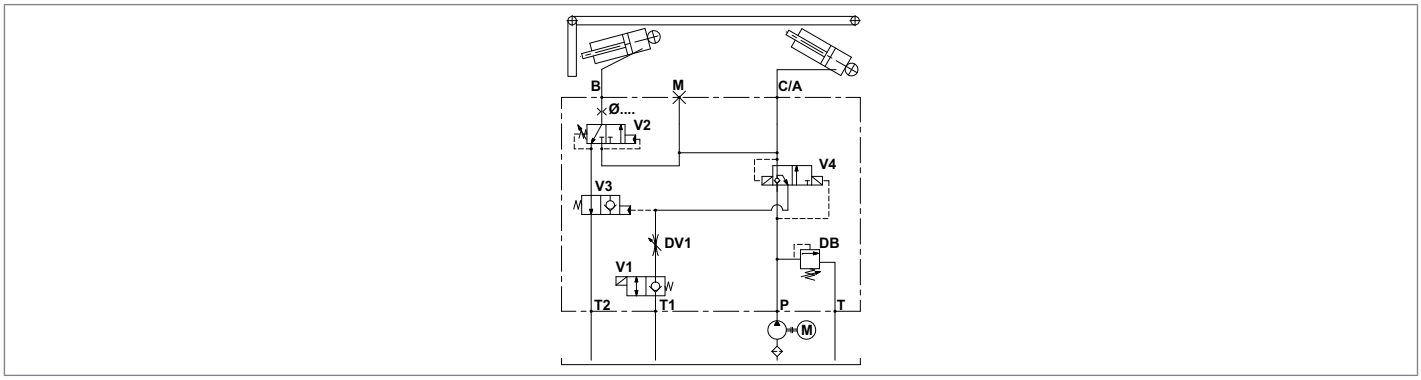
Closing phase: To close the Dock leveller you need to restart the motor by lifting the main cylinder (in consequence the lip cylinder is going to close with a setting speed set by the orifice Ø...).

When the lip is completely close the motor can be switched off and the Dock leveller returns to the normal position.

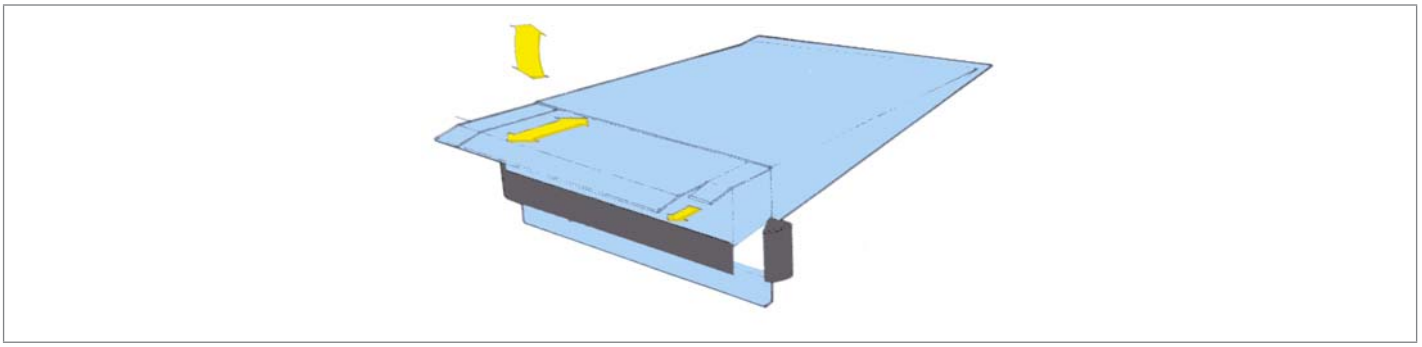
The V1 solenoid valve normally is connected to the emergency push button of the system. Pushing the emergency button the V1 valve return in closed position keeping the cylinder in position.



Picture 3 (Hydraulic hinged lip Dock leveller)



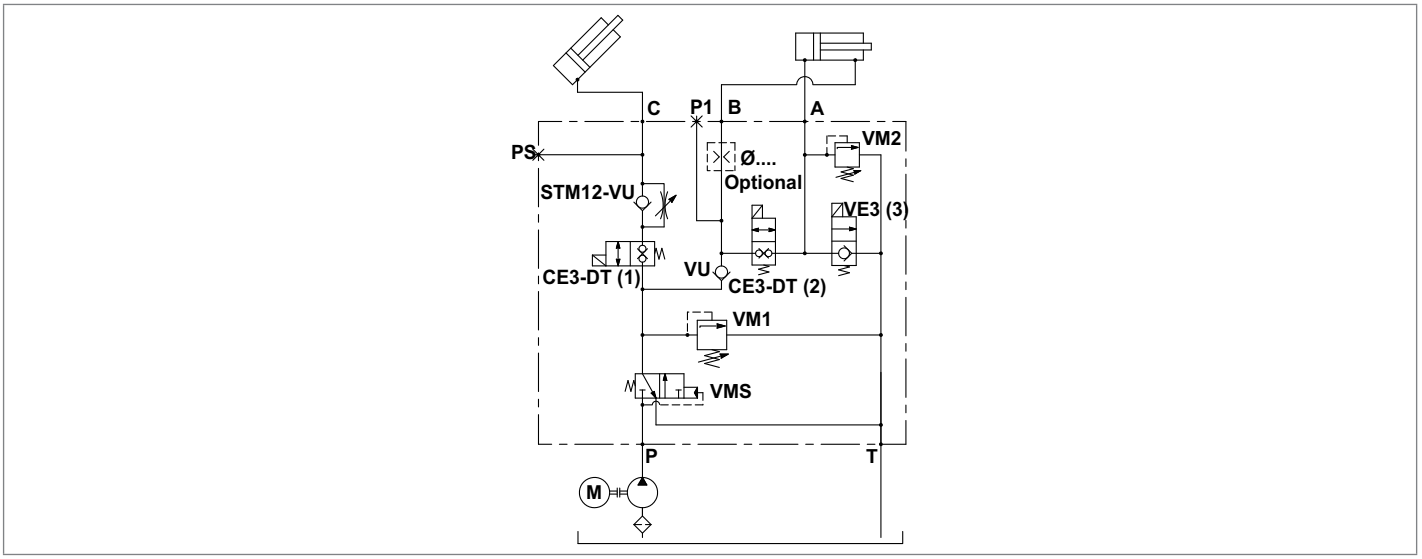
Scheme 1



Picture 4 (Hydraulic telescopic lip Dock leveller)

Hydraulic Dock leveller with double acting cylinder telescopic lip (Picture 4).
Opening phase: On the opening phase you need to switch on the electric motor energizing simultaneously the CE3-DT (1) solenoid valve. The VMS valve changes over and the main cylinder connected to port C lifts: When the main cylinder arrives at the required position, we energize the CE3-DT (2) solenoid valve and in consequence the telescopic lip double acting cylinder comes out in a regenerative mode between the A zone and B zone. When the telescopic lip arrives at the end of stroke the motor is switched off and all the solenoid valves are switched off too, so that the Dock leveller is completely open. The lip exit speed is controlled by the orifice Ø1.2 (optional).

Lowering phase: With the motor switched off the Dock leveller starts to lower itself energizing the CE3-DT (1) solenoid valve which moves the main cylinder, which lowers down until it is leaning itself on the truck. The lowering speed is controlled by the STM12-VU valve.
The VM2 relief valve that is located on the double acting cylinder A line works as an antishock during the lip exit phase and also as protection of the same in case of an occasional bump as the truck stops.
Closing phase. To bring back the Dock leveller to the sleeping position, we need to repeat the opening phase to lift the Dock leveller from the truck and after to retract back the lip we need to energize the VE3 (3) solenoid valve which puts the double acting chamber A on the return line.



Scheme 2

Power module selection
Choose the circuit which meets your application requirements.
Take note of all dimensions resulting from the basic components chosen for your application.
NOTE: dimensions may vary slightly and should be confirmed by DCOC, if the assembly is to be installed in a space with narrow clearance.
The tank capacity and the tank dimensions need to be large enough to assure proper pump suction: there must always be a reserve of oil in the tank when all cylinders are fully extended and avoid overflow when cylinders are fully retracted.
The tank must be evaluated also for best separation of air from oil, and for settling down oil contamination. It should be placed in a space with, at least, natural ventilation and it should permit enough heat dissipation to prevent high fluid temperature.
Select the electric motor by evaluating the power needed and the motor compliance with the heat developed during the expected run time (or „duty cycle“).

Hydraulic fluid for compact power module
Mineral oil based hydraulic fluids suitable for hydraulic systems can be used; they should have physical lubricating and chemical properties as specified by:

MINERAL OIL BASED HYDRAULIC FLUIDS HL (DIN 51524 part 1)
MINERAL OIL BASED HYDRAULIC FLUIDS HL P(DIN 51524 part 2)

For use of environmentally friendly fluids please consult DCOC.

Fluid viscosity, Temperature range of the operating fluid, Ambient temperature
The fluid viscosity should remain within the range 10 to 300 cSt (centistokes); recommended 15 to 120 cSt .
Permissive cold start viscosity is maximum 2000 cSt .
The fluid temperature should remain within the range -15°C nd 80°C (5°F and 176°F).
Note: For compact power module with plastic tank the fluid temperature should remain within the range -15°C and 70°C (5°F and 158°F).
Ambient temperature -15°C +40°C (5°F and 104°F).

Fluid cleanliness requirements and maintenance
We recommend a cleanliness of the operating fluid according to ISO 4406 Class 20/18/15 or cleaner.
All components of the hydraulic circuit , including hoses and actuators, must be flushed and cleaned before assembling, because the compact power module has a suction filter only.
The hydraulic fluid should be replaced after the first 50 hours, and then every 1000 hours, or, at least, once a year.

Power module installation
The mounting position is basically unrestricted; just avoid installations that could compromise the pump suction, Typically in these applications the Compact Power Module is assembled in horizontal position. It is recommended to support the power module on vibration dampening blocks when the mounting structure is expected to vibrate.

Wiring and starting-up
The cable size and lenght from the power source to the electric motor should be selected in order to avoid voltage drop.
It is strictly forbidden to allow the backwards rotation of the pump even at the first starting: to prevent reverse rotation, the wiring polarities must be correctly connected.
Caution: when energized, the surface temperature of the electric motor could reach temperature levels of 60-80°C (140-176°F): care should be taken to avoid any accidental contact of people with the motor surface.

A.C. Motors
The tolerances on the nominal voltage are:
Single phase motor: 230V +/-5% - Three phase motor: 230-400V +/-10%.
Protection degree : IP54 (protection against dust and water splash).
Insulation class: F (155°C) (311°F).
All motors are aluminum alloy die cast without painting.

Central Manifolds
The Central Manifolds shown in the catalogue are made in die cast aluminium alloy or extruded aluminum alloy AL 2011 (Al-Cu5.5Pb0.4Bi0.4 UNI 9002/5).. The validation of the Central Manifolds follows a lifetest with 250 bar (3625 psi) pulsed pressure repeated for 300.000 cycles.

Built-in valves
The valves used in the central manifolds are manufactured using steel with high mechanical strength. Surface treatments protect the exposed parts to the external environment. Standard seals are NBR (BUNA-N) with backup rings in PTFE. The cartridge valves with “leak proof seat design” have an average leakage of 10-15 drops/ minute (< 1 cm3/minute (0.06 in3/min)) at the maximum pressure using fluid ISO VG46 at 40°C (104°F). The

validation of the cartridge valves follows a life-test at pulsed maximum pressure (indicated for each valve) repeated for 500.000 cycles.
All the solenoid cartridge valves are fitted with protective O-Rings installed between the pole tube and the coil. These O-Rings protect the internal parts from condensation and contaminants , which could cause malfunction.
All the solenoid cartridge valves are designed for operating in D.C..
Power supply in A.C. requires a connector with bridge rectifier included.

External Gear Pumps
DCOC offers a wide range of External Gear Pumps to cover different kind of applications. The standard version are suitable for the biggest part of applications. The Low Duty pumps are a dedicated series of pumps for this kind of applications that are particulary cost effective. All the pumps are pressure compensated to guarantee the best efficiency.

Oil Tanks
In this catalogue you will find a wide selection of steel and plastic tanks available as a standard product. Steel tanks have Black paint finish and are suitable for operating temperature range -15°C / +80°C (5°F / 176°F). Plastic tanks are obtained in one piece in order to avoid welded parts that are weak points at extreme temperature and vibrations. Plastic tanks are suitable for operating temperature range -15°C / +70°C (5°F / 158°F).
Note: even if the plastic tank mounting system is designed to avoid oil leakage the tank must be securely anchored when fitted in mobile equipment and when subject to shocks and heavy vibrations. Please check that the anchorages do not stress or deform the tank.

European machine directive 2006/42/CE
According to the Machine Directive2006/42/CE, a complete power module, as described in paragraph 15 and made available to the European market, enters into the definition of „partly completed machinery“.
Instead, the power module subassemblies (motor, pump, reservoir, central manifold,...), when not assembled into a complete power pack, are considered „components“ which can be employed in a „machinery“ or a „partly completed machinery“. In this case, the DCOC components and subassemblies must be fitted in compliance with all the relevant technical data sheet applicable to the product, and shall not be operated, adjusted or disassembled before the complete machinery where they are incorporated has been declared to be in compliance with the Machine Directive 2006/42/CE.

Note
All the components shown in the catalogue ARE NOT suitable for use in potentially explosive atmosphere.

Technical information
Below you will find the most common equations used in hydraulics:

	Common Units	Symbols	Equations
Flow	l/min	Q	$Q = \frac{D \times n}{1000} \times 0{,}95$
Operating pressure	bar	P	$P = \frac{F}{0{,}1 \times A}$
Internal diameter hydraulic cylinder	mm	d	–
Area of hydraulic cylinder	mm^2	A	$A = \frac{\Pi \times d^2}{4}$
Piston force	N	F	–
Drive shaft	rev/min	n	–
Power requirement for motor	kW	N	$N = \frac{P \times Q}{612}$
Pump displacement	cm^3/rev	D	–
Torque requirement	Nm	M	$M = \frac{D \times d^2}{62{,}8 \times 0{,}87}$

The motors shown in these tables are a selection of our range.
In case of needs of different technical characteristics PLEASE CONTACT OUR SALES DEPARTEMENT.

NOTE
The electric motors shown in this pages are delivered by different certified suppliers.
This means the indicated dimensions could change a little, depending on which manufacturer will be assembled. On the CPM the choice of the manufacturer is based on our stock availability.

General technical data for compact power module MT series

With this catalogue DCOC introduces the „compact power module“ (CPM) MT type developed for clamping operation in Machine Tool. The CPM is an assembly of electric motor, central manifold with valves, pump, oil tank and a few modular elements able to cover the most parts of the schemes needed for this kind of application. The MT model is characterized by low noise level and a very space-saving design due to the direct assembly of the motor and modular elements to the central manifold.

Hydraulic details

Max Flow rate Q	up to 20 l/min
Max Intermittent pressure P2	up to 250 bar
Max Peak pressure P3	up to 270 bar (with a reduced number of cycles depending of pump size)
AC Motors power range	0.55 - 2.2 kW
AC Motors protection class	IP54
Gear pumps displacement	1.25 - 7.4 cc
Tank volume	up to 20 L
Average duty cycle	S3 (intermittent operation) 60 % (except for the 2.2 kW)

Power module selection

Choose the circuit which meets your application requirements.
Take note of all dimensions resulting from the basic components chosen for your application.
NOTE: dimensions may vary slightly and should be confirmed by DCOC if the assembly is to be installed in a space with narrow clearance.
The tank capacity and the tank dimensions need to be large enough to assure proper pump suction: there must always be a reserve of oil in the tank when all cylinders are fully extended and avoid overflow when cylinders are fully retracted.
The tank must be evaluated also for best separation of air from oil, and for settling down oil contamination. It should be placed in a space with, at least, natural ventilation and it should permit enough heat dissipation to prevent high fluid temperature.
Select the electric motor by evaluating the power needed and the motor compliance with the heat developed during the expected run time (or „duty cycle“).

Hydraulic fluid for compact power module

Mineral oil based hydraulic fluids suitable for hydraulic systems can be used; they should have physical lubricating and chemical properties as specified by:

MINERAL OIL BASED HYDRAULIC FLUIDS HL (DIN 51524 part 1)

MINERAL OIL BASED HYDRAULIC FLUIDS HL P(DIN 51524 part 2)

For use of environmentally friendly fluids please consult DCOC.

Fluid viscosity, temperature range of the operating fluid, ambient temperature

The fluid viscosity should remain within the range 10 to 300 cSt (centistokes); recommended 15 to 120 cSt .
Permissive cold start viscosity is maximum 2000 cSt .
The fluid temperature should remain within the range -15 °C and 70 °C (5 °F and 158 °F).
Ambient temperature -15 °C +40 °C (5 °F and 104 °F).

Fluid cleanliness requirements and maintenance

We recommend a cleanliness of the operating fluid according to ISO 4406 Class 20/18/15 or cleaner.
All components of the hydraulic circuit, including hoses and actuators, must be flushed and cleaned before assembling, because the compact power module has a suction filter only.
The hydraulic fluid should be replaced after the first 50 hours, and then every 1000 hours, or, at least, once a year.

Power module installation

The mounting position is basically un-restricted; just avoid installations that could compromise the pump suction. It is recommended to support the power module on vibration dampening blocks when the mounting structure is expected to vibrate.
Do not assembly the CPM to moving part. Finish required on mounting surface 0.3 mm over 140 mm lenght.

Wiring and starting-up

The wiring between power source and electric motor should be selected in order to avoid excessive voltage drop.
It is strictly forbidden to allow the backwards rotation of the pump even at the first starting: to prevent reverse rotation, the wiring polarities must be correctly connected.
Caution: when energized, the surface temperature of the electric motor could reach temperature levels of 60 - 80 °C (140 - 176 °F): care should be taken to avoid any accidental contact of people with the motor surface.

A.C. motors
The tolerances on the nominal voltage are:
Three phase motor: 230 - 400V +/-10 %.
Protection degree : IP54 (protection against dust and water splash).
Insulation class: F (155 °C) (311 °F).
All motors are aluminum alloy die cast without painting.

Central manifolds
The Central Manifold is made of extruded aluminum alloy AL 7020 (AlZn4.5Mg UNI9007/1). The validation of the Central Manifold follows a life-test with 250 bar (625 psi) pulsed pressure repeated for 500.000 cycles.

External gear pumps
All the pumps are pressure compensated with cast iron covers to guarantee the best efficiency and durability. The splined shaft guarantees a big number of start and stop cycles without failure or wearing. The validation of the pumps follows a life-test at P2 (intermittent max pressure) pulsed pressure repeated for 500.000 cycles.

Oil tanks
In this catalogue you will find a wide selection of plastic tanks available as a standard product. Plastic tanks are obtained in one piece in order to avoid welded parts that are weak points at extreme temperature and vibrations. Plastic tanks are suitable for operating temperature range -15 °C / +70 °C (5 °F / 158 °F).
Note: even if the plastic tank mounting system is designed to avoid oil leakage the tank must be securely anchored when subject to shocks and heavy vibrations. Please check that the anchorages do not stress or deform the tank.
Steel tanks are available on request and with a minimum of quantity. Please contact our Sales Department.

Modular stackable elements
Our modular system offers a wide range of standardised elements.
All the Modular Elements are made of extruded aluminum alloy AL 7020 (AlZn4.5Mg UNI9007/1). In the catalogue you will find a selection of the main used models.
The validation of the Modular Elements follows a life-test with 250 bar (625 psi) pulsed pressure repeated for 500.000 cycles.
Note: To reduce the complexity of the system and optimize the available space, special Modular Elements can be designed and manufactured following the customers needs. In this case please contact our Sales Department.

European machine directive 2006/42/CE
According to the Machine Directive2006/42/CE, a complete power module, as described in paragraph 15 and made available to the European market, enters into the definition of „partly completed machinery“.
Instead, the power module sub-assemblies (motor, pump, reservoir, central manifold,...), when not assembled into a complete power pack, are considered „components“ which can be employed in a „machinery“ or a „partly completed machinery“. In this case, the DCOC components and sub-assemblies must be fitted in compliance Instead, the power module sub-assemblies (motor, pump, reservoir, central manifold,...), when not assembled into a complete power pack, are considered „components“ which can be employed in a „machinery“ or a „partly completed machinery“. In this case, the DCOC components and sub-assemblies must be fitted in compliance with all the relevant technical data sheet applicable to the product, and shall not be operated, adjusted or disassembled before the complete machinery where they are incorporated has been declared to be in compliance with the Machine Directive 2006/42/CE.

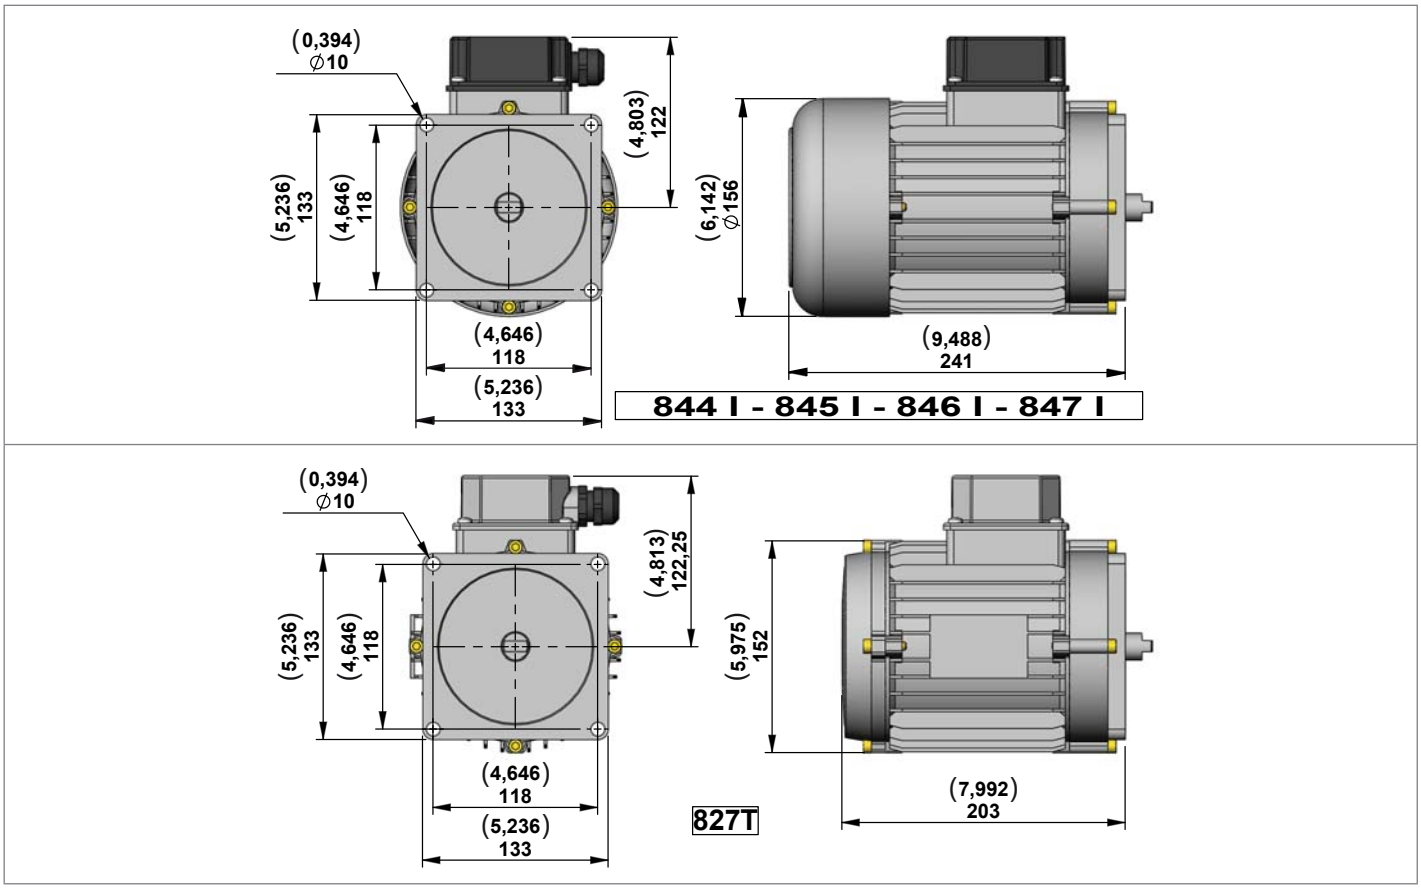
Note
All the components shown in the catalogue ARE NOT suitable for use in potentially explosive atmosphere.

Technical information
Below you will find the most common equations used in hydraulics:

	Common Units	Symbols	Equations
Flow	l/min	Q	$Q = \frac{D \times n}{1000} \times 0{,}95$
Operating pressure	bar	P	$P = \frac{F}{0{,}1 \times A}$
Internal diameter hydraulic cylinder	mm	d	–
Area of hydraulic cylinder	mm^2	A	$A = \frac{\Pi \times d^2}{4}$
Piston force	N	F	–
Drive shaft	rev/min	n	–
Power requirement for motor	kW	N	$N = \frac{P \times Q}{612}$
Pump displacement	cm^3/rev	D	–
Torque requirement	Nm	M	$M = \frac{D \times d^2}{62{,}8 \times 0{,}87}$

A.C. Electric Motor Compact Mounting Style for Power Module Type MT

These motors are designed to reduce the overall dimensions and the cost of the junction elements.



Three Phase Current Motors 230/400V 50Hz
IP54 Size IEC 80

Code	Type	Material Number	Power (kW)	Power (hp)	Poles	Rpm at 50Hz	Duty Cycle	Thermal Switch

The motors shown in these tables are a selection of our range.
In case of needs of different technical characteristics PLEASE CONTACT OUR SALES DEPARTEMENT.

NOTE
The electric motors shown in this pages are delivered by different certified suppliers.
This means the indicated dimensions could change a little, depending on which manufacturer will be assembled. On the CPM the choice of the manufacturer is based on our stock availability.

Technical data for:

Mechanical and Solenoid cartridge valves, Hydraulic integrated circuits, Load holding / Motion control valves, Compact power modules.

Introduction:
Do not apply the below technical data to the following sections:

- *High pressure cartridge valves and Proportional pressure reducing valves & Remote control manifolds (RE 90010-05 chapter 5 and 6). Please refer to the information included on the individual data sheet and/or contact the sales network indicated on it for any doubts.*
- *Compact Directional Valves (RE 90010-06 chapters 2, 3, 4 and 5). Please refer to the information included on the dedicated data sheet RE 18350-49 and/or contact the sales network indicated on the individual data sheet for any doubts.*

For Compact Power Modules (RE 90010-06 chapter 6), please refer to the information included on this data sheet (see page 11) and on the individual data sheet for technical and usage details. In case of doubt, contact the sales network indicated.

1. General

Bosch Rexroth Product Area 2 - Compact Hydraulics (CH) proposes a wide range of hydraulic components for applications in hydraulic circuits of mobile machinery. Detailed information about product performance, selection, installation and technical data can be obtained from our Customer Service Organization; here you may find a summary of general specifications which apply to all our CH hydraulic products with the aim to provide general guidance only. All our CH hydraulic products may be installed in hydraulic circuits of industrial machinery: however it is strongly recommended to contact in advance our Customer Service Organization.

2. Hydraulic fluids

Mineral oil based hydraulic fluids suitable for hydraulic systems can be used; they should have physical lubricating and chemical properties as specified by:

- MINERAL OIL BASED HYDRAULIC FLUIDS HL (DIN 51524 part 1)
- MINERAL OIL BASED HYDRAULIC FLUIDS HLP (DIN 51524 part 2).

For use of environmentally friendly fluids (vegetable or polyglycol base), or other fluids, please consult CH.

2.1 Fluid viscosity

When not differently specified in the individual data sheet, the fluid viscosity should remain within the range 3 to 400 cSt (centistokes). Hydraulic fluids are available in different viscosity classes identified by the ISO VG number, which corresponds to the kinematic viscosity at 40°C (104°F). Here is a table showing typical viscosity changes between 0°C and 100°C (32°F and 212°F) for mineral oil based fluids having various viscosity classes. The fluid should be selected with the aim to achieve an appropriate operating viscosity at the expected working temperatures.

VISCOSITY CLASS	KINEMATIC VISCOSITY - (cSt)		
	MAX at 0°C (32°F)	MED at 40°C (104°F)	MIN at 100°C (212°F)
ISO VG 10	90	10	2.4
ISO VG 22	300	22	4.1
ISO VG 32	420	32	5
ISO VG 46	780	46	6.1
ISO VG 68	1400	68	7.8
ISO VG 100	2560	100	9.9

Note: all main performance curves and specifications shown in CH technical literature are obtained using mineral based fluid ISO VG 46, i.e. 46 cSt at 40°C (104°F), with an oil temperature of 30-40°C (86-104°F).
More detailed technical characteristics are available at CH.

2.2 Fluid temperature recommendation

CH components are generally equipped with BUNA-N seals and, for this reason, the fluid temperature should remain within the -30°C and +100°C range (-22°F and +212°F). In case of temperatures outside this range, consult CH.
Warning: be careful! During operation the valve can heat up to oil temperature!

2.3 Fluid cleanliness requirements

The cause of malfunctions in hydraulic systems and components is often found to be excessive fluid contamination. The hard contaminant particles in the fluid wear the hydraulic components and prevent the poppets from re-seating, with consequent internal leakage and system inefficiency. For the correct operation of CH components it is necessary to adopt filtration methods which guarantee for life the specified fluid cleanliness level. It is important to ensure that hydraulic fluids are brought to the appropriate cleanliness level prior filling up the systems, and, when in doubt, also to flush the hydraulic components prior to installation. Fluid filtration must comply with recommended fluid contamination indicated on each single valve datasheet.
ISO 4406:1999 presently is the preferred standard; it defines the fluid cleanliness by three numbers respectively representing the maximum number of particles larger than **4µm**, **6µm** and **14µm** contained in one ml of fluid.

3. Internal leakage

Here is a table with general information about the sealing properties of CH valves and components with leak proof seat design; the allowed leakage tolerance may change depending on the design, number of poppets and valve size; this general information is given for guidance only and, for many valves, specific details about the permissible leakage tolerance can be found in the relevant data sheet.

The LEAKAGE for different valve families is expressed in cm^3/min, or drops/min and is measured in the specified test conditions.
The ratio between cm^3 and drops is approximately:
1 cm^3 (or 0.06 in^3) = 15 – 18 drops.
For pressure relief valves the leakage is indicated at re-seating conditions, identified as X% of pressure relief setting.

CHART OF SEALING PROPERTIES	
HYDRAULIC FUNCTION	Max leakage
Pressure relief 	15 drops at 80% of std pressure setting
Check valve 	5 drops/min
Pilot assisted counterbalance 	15 drops/min at 70% of pressure setting in re-seating conditions (cracking pressure)

4. Pressure setting

CH valves are supplied pre-set at the standard pressure setting shown by the relevant catalogue sheet. Whenever the application requires a re-adjustment, please ensure that the limits of the indicated pressure range and maximum working pressure are never exceeded.

5. Sealing of valve adjusters

Special plastic sealing caps for service are available for most CH valves and cartridges. Upon request, valves can be supplied factory sealed.

6. Storage of new components

The components shall not be exposed to direct sun light nor to sources of heat or ozone (like electric motors running), and should be stored in their original, protective packing at ambient temperature within the range -20°C and +50°C (-4°F and 122°F).

7. Ports

G type ports (ISO 228-1) are often standard on components with body for line connection; SAE sizes (straight thread), JIS or metric ports can be manufactured upon request.

8. Body materials

- Valves and integrated manifolds for high pressure and/or heavy duty applications are manufactured with high quality leaded steel, zinc plated with yellow trivalent chrome treatment.
- Valves and integrated manifolds for medium working pressure (up to 210 bar) can be made of high strength wrought aluminium, black anodized upon request.
- Housings for modular, solenoid operated directional valves and flow diverters are made of high strength cast iron, zinc plated with yellow trivalent chrome treatment.

9. Seals

O-Rings: Buna N (acrylonitrile butadiene), also named NBR (according to ASTM), compatible with fluids having mineral oil base, water-in-oil emulsions, and water-glycol fluids. These seals are standard for temperatures within the range -30°C and +100°C (-22°F and +212°F).
Back-up rings and Slide rings: strengthened PTFE (Politetrafluoroetilene like Teflon®, Lubriflon®, Ecoflon®, or similar).
Special FPM (Viton®) seals are available on request.
Note: the seal materials are compatible with the fluids normally used in hydraulic systems; in case of special fluids, if you suspect incompatibility between the fluid used and the standard seals, contact the CH service network.

9.1 Seal kits

- for cartridge valves: the kits include all the external seals;
- for components assembled as parts in bodies or housings: the kits include all external seals for flange fitting, or for matching different units together.
- in general seal kits contain seals for 10 valves.

10. Installation

- Only trained and competent personnel may carry out any work on Bosch Rexroth Oil Control valves.
- During any operation on Bosch Rexroth Oil Control valves, it is recommended to pay attention to valves surfaces temperature.
- Ensure that all matching surfaces are clean, without contamination.
- Ensure that all seals and back-up rings for the matching surfaces are flawless and correctly placed.
- Do not put any sealing material other than the standard seals.
- During the assembly of the valve and/or the group of valves, refer to the hydraulic scheme and to the name assigned to each port.
- Do not hang the valves and/or the group of valves to the hydraulics pipes, but always use the specific fixing holes.
- In case of use of screw and push and twist overrides, the command must be removed before starting the machine.
- Place in position the valve, then, by hand, insert the fittings and the locating screws.
- In case of cartridge valve, check that the cavity is clean, without sharp edges or chips. Dip the cartridge in clean oil, then insert it into the cavity and screw it in by hand, until you begin to compress the top O-Ring.
- Finally tighten with a calibrated torque wrench and torque up to the specifications shown in the catalogue.
- **Use gloves in order to avoid accidental injuries during installation or maintenance.**
- **Do not grab / handle product from moving parts (i.e. cables, levers, upper side of cartridges,...etc.**
- **All valves or groups of valves are attributable to pressure vessels. It‘s always recommended to place the components in a closed but ventilated compartment, able to protect the environment and users in case of accidental ejection of material under pressure (fittings, pipes, plugs expander ... etc.)**
- **Do not tamper with the valve. Only the substitution of the valve itself, the coil or permitted seals (part ok Bosch Rexroth seal kit) are generally allowed.**
- **Before removing or disassembling the valve or allowed parts (as pressure gauge ports, purge plugs, ...etc) it is strongly recommended to vent all hydraulic pressure from the system.**
- **Remove tension from the coils before any kind of maintenance / installation operation.**
- **Check the connections and the cable section with reference to the coils nominal current.**
- **During the first start of the machine, please ensure that the grounding system is connected and stay away from moving parts.**
- **In case of allowed adjustments on the valve, any maximum protrusion or other admissible maximum value indicated in valve datasheet must not be exceeded.**

11. Cavities for screw-in cartridges

CH has developed a complete range of cartridges which fit the cavity patterns with UN/UNF threads, according to SAE standards, nominal sizes 08-10-12-16-20. Internal parts of cartridges are designed with a global view of our comprehensive variety of hydraulic products; accordingly, our technology has been optimized in order to employ few basic parts for many different valves for best reliability, cost effectiveness and availability. Further, we can propose our cartridges in different versions, with a variety of external shells in order to fit other cavity patterns, such as ISO/METRIC, or special industrial patterns.

12. **Coils**

12.1 **Coil installation on solenoid cartridges**

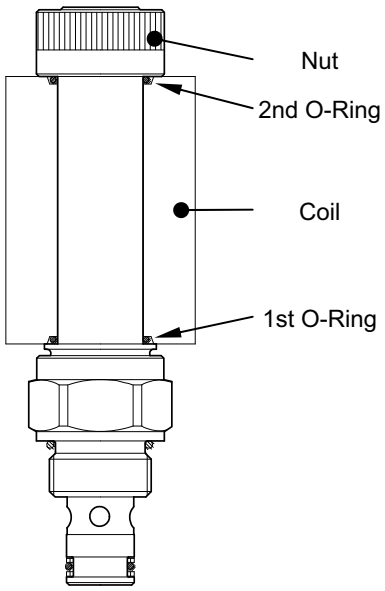
COIL INSTALLATION

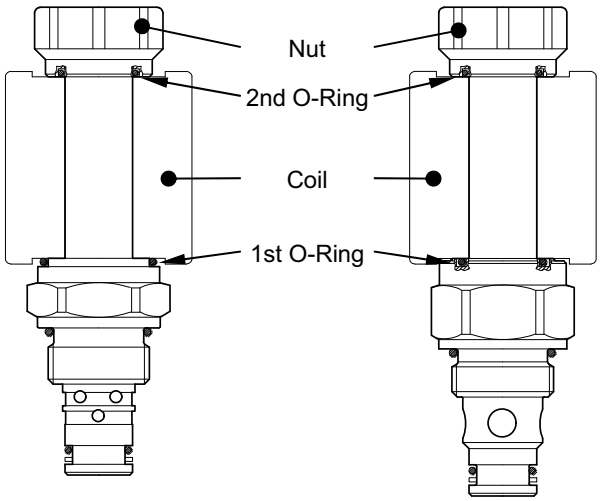
COIL WITH O-RING SEATS (S7-S5-R7)

- It is recommended to follow these steps:
- Insert 1st O-Ring (see drawing)
- Insert coil
- Insert 2nd O-Ring (see drawing)
- Tighten BY HAND coil retaning nut (in any case do not exceed the torque specified in the catalogue page).

COIL WITHOUT O-RING SEATS (S8-356)

- It is recommended to follow these steps:
- Insert 1st O-Ring (see drawing)
- Insert coil
- Tighten BY HAND coil retaining nut to the torque specified in the cartridge catalogue page. The 2nd O-Ring is fixed inside the nut.





IMPORTANT: O-Rings are the only protection against water infiltration between tube and coil, which may lead in short time to coil failure. The proper mounting of both O-Rings is therefore necessary to ensure normal life of coils. Bosch Rexroth Oil Control cannot guarantee any IP protection degree if both O-Rings are not properly mounted on coils.

12.2 **Working duty (DIN VDE 0580)**

The working duty ED of a coil is the ratio between energized time **ti** and full cycle time **tc** where **tc = ti + tr**, and **tr** = de-energized time.

ED = (ti / tc) • 100%

All CH coils are rated for **ED = 100%** (i.e. always energized), provided that the temperature limits of their insulation classes are not exceeded.

12.3 **Protection rating (DIN 40050 - Part 9 IEC 60529)**

Protection class is designated by the letter IP followed by two digits: the first digit refers to resistance against penetration of surrounding or foreign solid objects, the second against penetration of water. Protection class doesn't apply to explosion risks or to conditions such as moisture, corrosive agents, mildew etc.

- **IP65** means water protection against **LOW PRESSURE JETS**:water at 0.3 bar (43.5 psi) pressure sprayed from a distance of 2.5 – 3 m (8.2 – 9.8 ft) from every direction
  IP65 coils CANNOT BE PLUNGED INTO WATER OR REMAIN UNDER WATER.
- **IP67** means water protection against **30 MINUTES IMMERSION** under water 1 m (3.3 ft) deep.
- **IP69K** means water protection against **HIGH PRESSURE JETS**:

water at high pressure and temperature, 80-100 bar (1160–1450 psi) and 75-85°C (167°F-185°F), sprayed from a distance of 100–150 mm (3.9–5.9 in) from every direction.

12.4 Coil resistance to thermal shock dunk test

This test, well known and commonly applied in the construction, agricultural and mobile equipment markets, includes several steps :
1) Coil is maintained energized for 1 hour at nominal voltage and ambient temperature 25°C (77°F), or is not energized but heated for 2 hours in oven at 105°C (221°F).
2) Coil is immediately immersed in water at 20 - 25°C (68 – 77°F) for 30 minutes, at minimum depth 300 mm (11.8 in).
3) Coil, when still wet, is tested for moisture ingression and dielectric breakdown with a dielectric tester, like the “Hypot”. With this tester, a voltage differential of 500V DC is applied between the winding and the coil external surface in order to measure the current leakage which must not exceed 100µA (micro-amps).
4) The complete test is performed on samples of 10 coils minimum, and is repeated at least five times.

All coils with EN 175301-803 (ex DIN 43650) connector correctly mounted comply with IP65 protection class.
Coils with integrated Deutsch DT04-2P connector have IP69K protection class, and pass the thermal shock dunk test.

12.5 Heat insulation (DIN VDE 0580)

The actual coil temperature **T** is the result of (**TA** + **ΔT**), where:
TA = ambient temperature, and ΔT = temperature rise due to coil operation.
Example: with TA = 40°C (104°F) and ΔTmax = 115°C (239°F), **T = 155°C (311°F)**; with TA = 40°C (104°F) and ΔTmax = 140°C (284°F), **T = 180°C (365°F)**.
The coil ΔT is determined following a standard procedure (DIN VDE 0580):

- the coil is mounted on a standard cartridge, inserted in a standard steel manifold placed on a wooden surface.
- the coil is maintained energized for 1 hour at nominal voltage, with ambient temperature TA = 20-25°C (68-77°F) and with natural ventilation.

CLASS H coils are rated for **T max = 180°C (356°F)**:
if ambient temperature exceeds the value **Tx = 180°C (356°F)** - **ΔT**, a class H coil cannot be used under continuous duty cycle (ED = 100%); the coil must be periodically de-energized to prevent exceeding the MAX temperature.
In any case, for the correct operation of coils, it is always necessary to provide means for heat dissipation and, at least, natural ventilation.

Caution: when energized, the coil surface temperature can reach quickly (in few minutes of continuous operation) temperature levels of 80-100°C (176-212°F), which is not directly related to the coil ΔT: **care should be taken to avoid any accidental contact of people with the coil surface.**

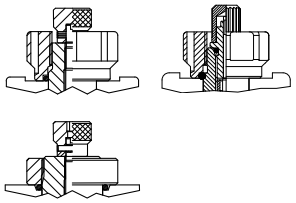
12.6 AC Service

All CH solenoid valves are designed to operate exclusively with DC power supply. All coil windings are DC.
AC operation is possible using EN 175301-803 (ex DIN 43650) connectors with rectifier.

12.7 **Optional manual emergency for solenoid cartridges**

Upon request, the solenoid cartridges can be equipped with tubes incorporating a manual emergency device for valve operation when the coil cannot be energized, like in case of voltage shortage.
IMPORTANT: manual emergency must always be released before the re-start of thew machine!
Here is a summary of the different options available:

SCREW-OUT KNOB STYLE

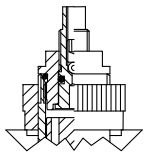


AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position pilot operated normally closed series 8A / 8I
- 2 way 2 position direct acting poppet style normally closed series 8I
- 2 way 2 position direct acting double lock normally open series 8I
- 3 way 2 position spool style series 8I / 7I
- 4 way 2 position spool style series 8I / 7I

OPERATION
To operate manual override, screw out the knob turning it counterclockwise.
To return to normal valve operation, turn the knob clockwise.

SCREW-IN STYLE

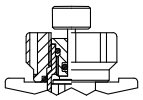


AVAILABLE ON FOLLOWING MODELS:

- Proportional valves series 5A

OPERATION
To operate manual override, screw in the pin turning it clockwise with wrench.
To return to normal valve operation, turn the bolt counterclockwise.

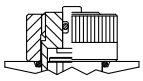
PUSH STYLE



AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position pilot operated normally open series 8A / 8I
- 2 way 2 position direct acting poppet style normally open series 8I
- 2 way 2 position direct acting double lock normally closed series 8I

OPERATION
To operate manual override, push and hold override button.
To return to normal valve operation, simply release the button.

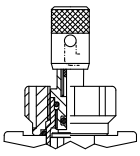


AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position direct acting double lock normally closed series 7A
- 3 way 2 position direct acting poppet style series 7A

OPERATION
To operate manual override, push and hold override button with tool.
To return to normal valve operation, simply release the button.

PUSH AND TWIST STYLE

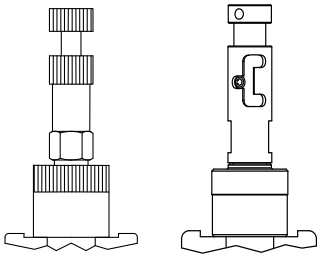


AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position pilot operated normally open series 8A / 8I
- 2 way 2 position direct acting poppet style normally open series 8I
- 2 way 2 position direct acting double lock normally closed series 8I

OPERATION
To operate manual override button, turn clockwise and release.
To return to normal valve operation, push override button, turn counterclockwise and release.

PUSH AND PULL STYLE



AVAILABLE ON FOLLOWING MODELS:

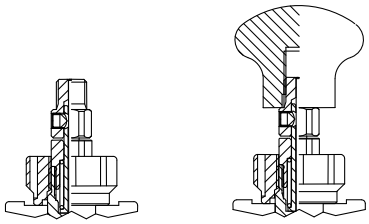
- 4 way 3 position spool style series 8A / 7I

OPERATION
To operate manual override, push to override S2 coil or pull to override S1 coil and hold override button.
To return to normal valve operation, simply release the button.

SCREW-OUT KNOB STYLE

CABLE OPERATED

HAND OPERATED



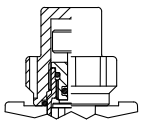
AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position pilot operated normally closed series 8A size 06

OPERATION

To operate manual override, pull and hold the knob. This override is not detented. Force required to operate is approximately 50 N (11.2 lbs).
This override can also be remote operated by a cable fixed to the M8 thread. In this case the spring may not provide enough force to overcome internal cable friction and the user must provide an external means of returning the cable.

SAFETY PUSH STYLE



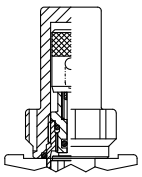
AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position pilot operated normally open series 8A / 8I
- 2 way 2 position direct acting poppet style normally open series 8I
- 2 way 2 position direct acting double lock normally closed series 8I

OPERATION

To operate manual override, screw out the knob protection after removing wire-locking and push and hold override button.
To return to normal valve operation, simply release the button.

SAFETY PUSH AND TWIST STYLE



AVAILABLE ON FOLLOWING MODELS:

- 2 way 2 position pilot operated normally open series 8A / 8I
- 2 way 2 position direct acting poppet style normally open series 8I
- 2 way 2 position direct acting double lock normally closed series 8I

OPERATION

To operate manual override, screw out the knob protection after removing wire-locking and turn clockwise and release override button.
To return to normal valve operation, push override button, turn counterclockwise and release.

13. Technical data for Proportional valves CH

GLOSSARY OF TERMS AND DEFINITIONS

Current is the flow of electrons in a conductor, measured in Amperes (A) or milli-amperes (mA) and abbreviated “I”.

Voltage is the potential for current flow in an electrical circuit. It is measured in Volts (V) and abbreviated “V.”

Resistance is a material’s opposition to the flow of electrical current. It depends on physical properties as well as temperature, size and shape of the material. It is measured in Ohms (Ω) and abbreviated “R”. The tolerance allowed on resistance at ambient temperature 20-25°C (68 - 77°F) is ± 7 %.

Hysteresis is the difference in regulated hydraulic parameter (flow / pressure) at a fixed current level when current is increasing vs. when current is decreasing. It is normally expressed as a percentage of the total change in regulated hydraulic parameter (flow / pressure).
Example: With 900 mA input current and increasing current, 20 bar (290 psi) regulated pressure is achieved. With 900 mA input current and decreasing current, 20.8 bar (302 psi) regulated pressure is achieved. There is a 0.8 bar (12 psi) difference in regulated pressure achieved with the same current depending on whether current is increasing or decreasing.
If Maximum Regulated Pressure = 25 bar (363 psi) and Minimum Regulated Pressure = 4 bar (58 psi), the total regulated parameter change is 25 (363) – 4 (58) = 21 bar (305 psi).
Hysteresis = (0.8 / 21) x 100 = 3.8%.

Proportional Controller is a device that converts a low-power input signal into an output signal that is capable of operating the valve. This output signal can be modified to include PWM, ramping, etc.
Pulse Width Modulation (PWM) is a method used to vary the average current induced in a coil using a square wave of fixed frequency, and variable ratios of on/off times.

Dither is a method used to reduce hysteresis by applying a square or triangle wave to the coil voltage. It can be applied to straight DC or PWM.

Maximum Control Current is the point where increasing current input no longer results in an increase in regulated hydraulic parameter (flow / pressure).

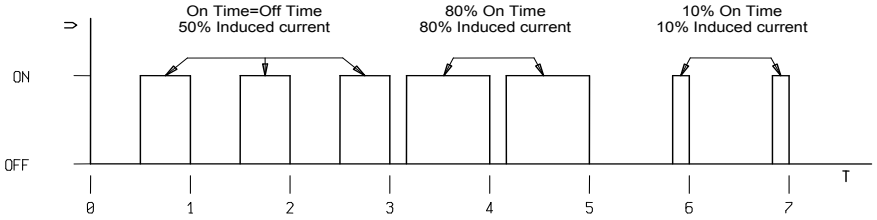
I-Min and I-Max represent the minimum and maximum control current induced into a proportional valve coil. The tolerance allowed is ± 10 % and depends largely from coil´s resistance tolerance.

Ramping is the ability to control the rate of change of the output of an electronic controller.

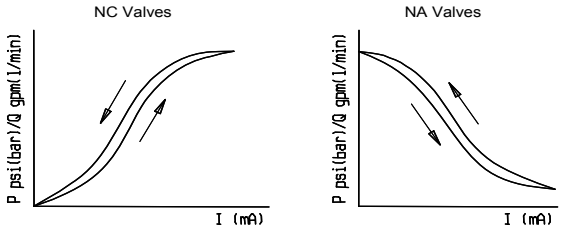
VERY IMPORTANT:

a. It is strongly recommended to use pulse-width-modulation (PWM) as input signal to coils rather than straight DC. Our tests indicate that PWM input signal allows best valve performance, significantly reducing hysteresis and response times of all our proportional valves. All features shown and explained in next pages are available from many industry-common electronic controllers, including Proportional Controllers described in this catalogue.
b. CH recommends to use always 12 V DC coils in combination with 24 V DC supply voltage to the electronic controller. This allows to use a much wider control current range independently from coil temperature, since anyway current is regulated by the electronic controller and there is no coil overheating risk.

PULSE WIDTH MODULATION

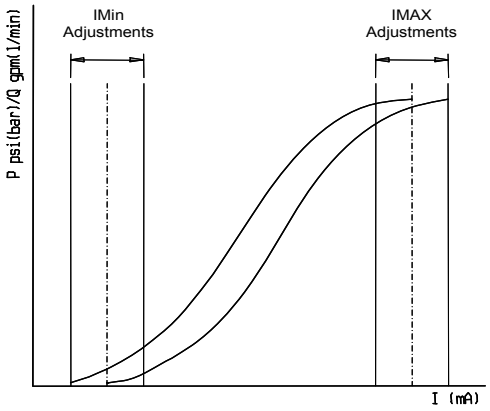


HYSTERESIS CHARACTERISTIC WITH 120 Hz PWM



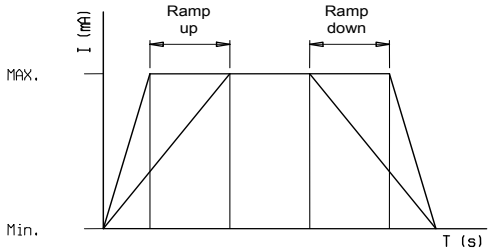
For normally closed proportional valves, the hysteresis curve with increasing current is always lower than the curve with decreasing current.
The opposite is true for normally open proportional valves as shown.

REPEATABILITY RANGE



An important control feature of electronic controllers is I-Min / I-Max adjustment.
This feature allows control of the regulated hydraulic parameter across the full range of the electronic controller by eliminating deadband.

RAMP SLOPE CONTROL



Many commercially available controllers also offer a ramping control feature.
This feature allows to adjust the current rate of change between the I-Min and I-Max setpoints.

14. **European machine directive 2006/42/CE**

The CH valves or components described in this catalogue can be employed in machinery or systems which need to comply with the European Machine Directive
In such case, the CH valves, manifolds, components and assemblies must be fitted in compliance with all the relevant technical data sheet applicable to the product, and shall not be operated, adjusted or disassembled before the complete machinery where they are incorporated has been declared to be in compliance with the Machine Directive 2006/42/CE.

15. General technical data for compact power modules

Through the years DCOC has developed a highly evolved modular system resulting in powerful, flexible and cost effective power pack range, identified as **“compact power modules”**. In its easier configuration, a “compact power module” is an assembly of electric motor, central manifold with valves, pump, oil tank and a few connection elements. The central manifold, with its built-in valves, allows to achieve a large variety of hydraulic control circuits. If more complex circuits are needed, modular integrated blocks can be added by flange mounting, or interfacing, to the central manifold to extend its capabilities.

15.1 Power module selection

- Choose the circuit which meets your application requirements.
- Take note of all dimensions resulting from the basic components chosen for your application. NOTE: dimensions may vary slightly and should be confirmed by DCOC, if the assembly is to be installed in a space with narrow clearance.
- The tank capacity and the tank dimensions need to be large enough to assure proper pump suction: there must always be a reserve of oil in the tank when all cylinders are fully extended and avoid overflow when cylinders are fully retracted.
- The tank must be evaluated also for best separation of air from oil, and for settling down oil contamination. It should be placed in a space with, at least, natural ventilation and it should permit enough heat dissipation to prevent fluid temperature from exceeding 60°C (140°F).
- Select the electric motor by evaluating the power needed and the motor compliance with the heat developed during the expected run time (or “duty cycle”). Motor performance diagrams for “continuous running” (S1), “short time running” (S2) or “intermittent periodic running” (S3) are available in the catalogue. In case of doubt, consult the factory.

15.2 Power module installation

The mounting position is basically un-restricted; just avoid installations that could compromise the pump suction. It is recommended to support the power module on vibration dampening blocks when the mounting structure is expected to vibrate.

15.3 Hydraulic fluid for power module

It should meet all specifications given for the other DCOC valves and components, except that:

- **the viscosity** should remain within the range 10 to 300 cSt (centistokes); best 15 to 120 cSt.
- **the temperature** should remain within the range -15°C and +80°C (5°F and176°F). In fact, these are the temperature limits generally recommended for the gaskets employed in these power modules.

15.4 Cleaning and maintenance

All components of the hydraulic circuit, including hoses and actuators, must be flushed clean before assembling, because the power module only has a suction filter.
The hydraulic fluid should be replaced after the first 100 hours, and then every 3000 hours, or, at least, once a year.

15.5 Wiring and starting-up

The wiring between battery and electric motor should be selected in order to avoid excessive voltage drop (recommended less than 1 V).
It is strictly forbidden to allow the backwards rotation of the pump even at the first starting: to prevent reverse rotation, **the wiring polarities must be correctly connected**.

Caution: when energized, the surface temperature of the electric motor could reach temperature levels of 60–80°C (140–176°F): **care should be taken to avoid any accidental contact of people with the motor surface**.

The data specified above only serve to describe the product. No statements concerning a certain condition or suitability for a certain application can be derived from our information. The information given does not release the user from the obligation of own judgment and verification. It must be remembered that our products are subject to a natural process of wear and aging.

Subject to change.

Technical data for Compact Directional valves

Introduction:
Following technical data refers to Compact Hydraulics valves (RE 90010-06 chapters 2,3,4 and 5)

1. General

Bosch Rexroth Product Area 2 - Compact Hydraulics (CH) proposes a wide range of hydraulic components for applications in hydraulic circuits of mobile and industrial machinery. Detailed information about product performance, selection, installation and technical data can be obtained from our Customer Service Organization; here you may find a summary of general specifications which apply to all our CH hydraulic products with the aim to provide general guidance only.

2. Hydraulic fluids

Mineral oil based hydraulic fluids suitable for hydraulic systems can be used; they should have physical lubricating and chemical properties as specified by:

- MINERAL OIL BASED HYDRAULIC FLUIDS HL (DIN 51524 part 1)
- MINERAL OIL BASED HYDRAULIC FLUIDS HLP (DIN 51524 part 2).

For use of environmentally friendly fluids (vegetable or polyglycol base), or other fluids, please consult CH.

2.1 Fluid viscosity

When not differently specified in the individual data sheet, the fluid viscosity should remain within the range 5 to 420 cSt (centistokes). Hydraulic fluids are available in different viscosity classes identified by the ISO VG number, which corresponds to the kinematic viscosity at 40°C (104°F). Here is a table showing typical viscosity changes between 0°C and 100°C (32°F and 212°F) for mineral oil based fluids having various viscosity classes. The fluid should be selected with the aim to achieve an appropriate operating viscosity at the expected working temperatures.

VISCOSITY CLASS	KINEMATIC VISCOSITY - (cSt)		
	MAX at 0°C (32°F)	MED at 40°C (104°F)	MIN at 100°C (212°F)
ISO VG 10	90	10	2.4
ISO VG 22	300	22	4.1
ISO VG 32	420	32	5
ISO VG 46	780	46	6.1
ISO VG 68	1400	68	7.8
ISO VG 100	2560	100	9.9

Note: all main performance curves and specifications shown in CH technical literature are obtained using mineral based fluid ISO VG 32, i.e. 32 cSt at 40°C (104°F), with an oil temperature of 40-50°C (104-122°F).
More detailed technical characteristics are available at CH.

2.2 Fluid temperature recommendation

CH components are generally equipped with BUNA-N seals and, for this reason, the fluid temperature should remain within the -20°C and +80°C range (-4°F and +212°F). Temperature of -30°C (-22°F) is generally acceptable when the machine is not working. Temperature peaks up to 105°C (221°F) are allowed for short time. In case of temperatures outside this range, consult the company.

2.3 Fluid cleanliness requirements

The cause of malfunctions in hydraulic systems and components is often found to be excessive fluid contamination. The hard contaminant particles in the fluid wear the hydraulic components and can lead spools to stick in the valve body with consequent internal leakage and system inefficiency. For the correct operation of CH components it is necessary to adopt filtration methods which guarantee for life the specified fluid cleanliness level. It is important to ensure that hydraulic fluids are brought to the appropriate cleanliness level prior filling up the systems, and, when in doubt, also to flush the hydraulic components prior to installation.
Maximum allowed value of fluid contamination is mentioned on individual data sheet.
If not specified, please follow the table below

TYPE OF SYSTEM TYPE OF VALVE	OIL FILTRATION RECOMMENDATIONS		
	Cleanliness class recommended		Absolute filtration (micron rating) (**)
	ISO 4406 : 1999	NAS 1638 (*)	
Systems / components operating at HIGH PRESSURE > 250 bar (3600 psi) HIGH DUTY CYCLE APPLICATIONS Systems / components with LOW dirt tolerance	18 / 16 / 13	7 - 8	5
Systems / components operating at MEDIUM HIGH PRESSURE Systems / components with moderate dirt tolerance	19 / 17 / 14	9	10
Systems / components operating at LOW PRESSURE < 100 bar (1500 psi) LOW DUTY CYCLE APPLICATIONS Systems / components with GOOD dirt tolerance	20 / 18 / 15	10 - 11	20

(*) Contamination class NAS 1638 (National Aerospace Standard, conceived in the early 60's, officially superseded since June 2001): it is still followed and it is determined by counting the total particles of different size ranges contained in 100 ml of fluid.

(**) Absolute filtration: is a characteristic of each type of filter; approximately, it refers to the size (expressed in microns) of the largest spherical particle which may pass through the filter.

3. **Pressure setting**

Compact directional valves are supplied pre-set at the standard pressure setting shown by the relevant catalogue sheet.Whenever the application requires a re-adjustment, please ensure that the limits of the indicated pressure range and maximum working pressure are never exceeded.

4. **Sealing of valve adjusters**

Special plastic sealing caps for service are available for most CH valves and cartridges. Upon request, valves can be supplied factory sealed.

5. **Storage of new components**

The components shall not be exposed to direct sun light nor to sources of heat or ozone (like electric motors running), and should be stored in their original, protective packing at ambient temperature within the range -20°C and +50°C (-4°F and 122°F).

6. **Ports**

G type ports (ISO 228-1) are often standard on components with body for line connection; SAE sizes (straight thread), JIS or metric ports can be manufactured upon request.

7. **Body materials**

- Valves and integrated manifolds for medium working pressure (up to 250 bar) can be made of high strength wrought aluminium, black anodized upon request.
- Housings for modular, solenoid operated directional valves and flow diverters are made of high strength cast iron, zinc plated with yellow trivalent chrome treatment.

8. **Seals**

O-Rings: Buna N (acrylonitrile butadiene), also named NBR (according to ASTM), compatible with fluids having mineral oil base, water-in-oil emulsions, and water-glycol fluids. These seals are standard for temperatures within the range -30°C and +100°C (-22°F and +212°F).
Back-up rings and Slide rings: strengthened PTFE (Politetrafluoroetilene like Teflon®, Lubriflon®, Ecoflon®, or similar).
Note: the seal materials are compatible with the fluids normally used in hydraulic systems; in case of special fluids, if you suspect incompatibility between the fluid used and the standard seals, contact the CH service network.

9. **Installation / Maintenance**

- Ensure that all matching surfaces are clean, without contamination.
- Ensure that all seals and back-up rings for the matching surfaces are flawless and correctly placed.
- Do not put any sealing material other than the standard seals.
- Place in position the valve, then, by hand, insert the fittings and the locating screws.
- During the assembly of the valve and/or the group of valves, refer to the hydraulic scheme and to the name assigned to each port.
- Do not hang the valves and/or the group of valves to the hydraulics pipes, but always use the specific fixing holes.
- In case of use of screw and push and twist overrides, the command must be removed before starting the machine
- In case of cartridge valve, check that the cavity is clean, without sharp edges or chips. Dip the cartridge in clean oil, then insert it into the cavity and screw it in by hand, until you begin to compress the top O-Ring.
- Finally tighten with a calibrated torque wrench and torque up to the specifications shown in the catalogue.
- Use gloves in order to avoid accidental injuries during installation or maintenance.
- Do not grab / handle product from moving parts (i.e. cables, levers...etc.)
- All valves or groups of valves are attributable to pressure vessels. It‘s always recommended to place the components in a closed but ventilated compartment, able to protect the environment and users in case of accidental ejection of material under pressure (fittings, pipes, plugs expander ... etc.)
- Do not tamper with the valve. Only the substitution of the valve itself, the coil or the retainer kit are generally allowed

- Remove tension from the coils before any kind of maintenance / installation operation
- Check the connections and the cable section with reference to the coils nominal current
- During the first start of the machine, please ensure that the grounding system is connected and stay away from moving parts.

10. **Cavities for screw-in cartridges**

CH has developed a complete range of cartridges which fit the cavity patterns with UN/UNF threads, according to SAE standards, nominal sizes 08-10-12-16-20. Internal parts of cartridges are designed with a global view of our comprehensive variety of hydraulic products; accordingly, our technology has been optimized in order to employ few basic parts for many different valves for best reliability, cost effectiveness and availability. Further, we can propose our cartridges in different versions, with a variety of external shells in order to fit other cavity patterns, such as ISO/METRIC, or special industrial patterns.

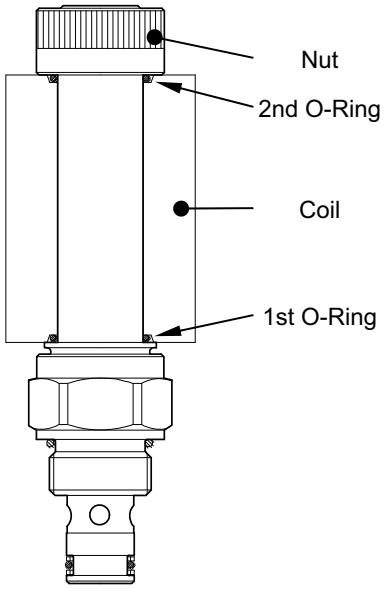
11. **Coils**

11.1 **Coil installation on solenoid cartridges**

COIL INSTALLATION

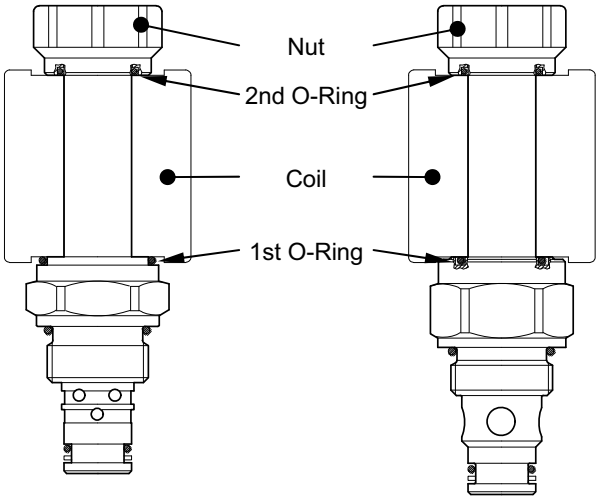
COIL WITH O-RING SEATS (S7-S5-R7)

- It is recommended to follow these steps:
- Insert 1st O-Ring (see drawing)
- Insert coil
- Insert 2nd O-Ring (see drawing)
- Tighten BY HAND coil retaning nut to the torque specified in the cartridge catalogue page.



OIL WITHOUT O-RING SEATS (S8-356)

- It is recommended to follow these steps:
- Insert 1st O-Ring (see drawing)
- Insert coil
- Tighten BY HAND coil retaining nut to the torque specified in the cartridge catalogue page. The 2nd O-Ring is fixed inside the nut.



IMPORTANT: O-Rings are the only protection against water infiltration between tube and coil, which may lead in short time to coil failure. The proper mounting of both O-Rings is therefore necessary to ensure normal life of coils when operating in presence of water, ice, moisture etc. Oil Control cannot guarantee any IP protection degree if both O-Rings are not properly mounted on coils.

11.2 **Working duty (DIN VDE 0580)**

The working duty ED of a coil is the ratio between energized time **ti** and full cycle time **tc** where **tc = ti + tr**, and **tr** = de-energized time.

$$ED = (ti / tc) \cdot 100\%$$

All CH coils are rated for **ED = 100%** (i.e. always energized), provided that the temperature limits of their insulation classes are not exceeded.

11.3 **Protection rating (DIN 40050 - Part 9 IEC 60529)**

Protection class is designated by the letter IP followed by two digits: the first digit refers to resistance against penetration of surrounding or foreign solid objects, the second against penetration of water. Protection class doesn't apply to explosion risks or to conditions such as moisture, corrosive agents, mildew etc.

- **IP65** means water protection against **LOW PRESSURE JETS**:water at 0.3 bar (43.5 psi) pressure sprayed from a distance of 2.5 – 3 m (8.2 – 9.8 ft) from every direction
  IP65 coils CANNOT BE PLUNGED INTO WATER OR REMAIN UNDER WATER.
- **IP67** means water protection against **30 MINUTES IMMERSION** under water 1 m (3.3 ft) deep.
- **IP69K** means water protection against **HIGH PRESSURE JETS**:

water at high pressure and temperature, 80-100 bar (1160–1450 psi) and 75-85°C (167°F-185°F), sprayed from a distance of 100–150 mm (3.9–5.9 in) from every direction.

11.4 **Coil resistance to thermal shock dunk test**

This test, well known and commonly applied in the construction, agricultural and mobile equipment markets, includes several steps :
1) Coil is maintained energized for 1 hour at nominal voltage and ambient temperature 25°C (77°F), or is not energized but heated for 2 hours in oven at 105°C (221°F).
2) Coil is immediately immersed in water at 20 - 25°C (68 – 77°F) for 30 minutes, at minimum depth 300 mm (11.8 in).
3) Coil, when still wet, is tested for moisture ingression and dielectric breakdown with a dielectric tester, like the "Hypot". With this tester, a voltage differential of 500V DC is applied between the winding and the coil external surface in order to measure the current leakage which must not exceed 100µA (micro-amps).
4) The complete test is performed on samples of 10 coils minimum, and is repeated at least five times.

All coils with EN 175301-803 (ex DIN 43650) connector correctly mounted comply with IP65 protection class.
Coils with integrated Deutsch DT04-2P connector have IP69K protection class, and pass the thermal shock dunk test.

11.5 **Heat insulation (DIN VDE 0580)**

The actual coil temperature **T** is the result of (**TA** + **ΔT**), where:
TA = ambient temperature, and ΔT = temperature rise due to coil operation.
Example: with TA = 40°C (104°F) and ΔTmax = 115°C (239°F), **T = 155°C (311°F)**; with TA = 40°C (104°F) and ΔTmax = 140°C (284°F), **T = 180°C (365°F)**.
The coil ΔT is determined following a standard procedure (DIN VDE 0580):

- the coil is mounted on a standard cartridge, inserted in a standard steel manifold placed on a wooden surface.
- the coil is maintained energized for 1 hour at nominal voltage, with ambient temperature TA = 20-25°C (68-77°F) and with natural ventilation.

CLASS H coils are rated for **T max = 180°C (356°F)**:
if ambient temperature exceeds the value **Tx = 180°C (356°F)** - **ΔT**, a class H coil cannot be used under continuous duty cycle (ED = 100%); the coil must be periodically de-energized to prevent exceeding the MAX temperature.
In any case, for the correct operation of coils, it is always necessary to provide means for heat dissipation and, at least, natural ventilation.

Caution: when energized, the coil and valve surface temperature can reach quickly (in few minutes of continuous operation) temperature levels of 80-100°C (176-212°F), which is not directly related to the coil ΔT: **care should be taken to avoid any accidental contact of people with the coil and valve surfaces.**

11.6 **AC Service**

All CH solenoid valves are designed to operate exclusively with DC power supply. All coil windings are DC.
AC operation is possible using EN 175301-803 (ex DIN 43650) connectors with rectifier.

11.7 **Optional manual emergency for solenoid cartridges**

Please refer to the data sheet RE 18350-50

12. Technical data for Proportional valves CH

GLOSSARY OF TERMS AND DEFINITIONS

Current is the flow of electrons in a conductor, measured in Amperes (A) or milli-amperes (mA) and abbreviated “I”.

Voltage is the potential for current flow in an electrical circuit. It is measured in Volts (V) and abbreviated “V.”

Resistance is a material’s opposition to the flow of electrical current. It depends on physical properties as well as temperature, size and shape of the material. It is measured in Ohms (Ω) and abbreviated “R”. The tolerance allowed on resistance at ambient temperature 20-25°C (68 - 77°F) is ± 7 %.

Hysteresis is the difference in regulated hydraulic parameter (flow / pressure) at a fixed current level when current is increasing vs. when current is decreasing. It is normally expressed as a percentage of the total change in regulated hydraulic parameter (flow / pressure).
Example: With 900 mA input current and increasing current, 20 bar (290 psi) regulated pressure is achieved. With 900 mA input current and decreasing current, 20.8 bar (302 psi) regulated pressure is achieved. There is a 0.8 bar (12 psi) difference in regulated pressure achieved with the same current depending on whether current is increasing or decreasing.
If Maximum Regulated Pressure = 25 bar (363 psi) and Minimum Regulated Pressure = 4 bar (58 psi), the total regulated parameter change is 25 (363) – 4 (58) = 21 bar (305 psi).
Hysteresis = (0.8 / 21) x 100 = 3.8%.

Proportional Controller is a device that converts a low-power input signal into an output signal that is capable of operating the valve. This output signal can be modified to include PWM, ramping, etc.
Pulse Width Modulation (PWM) is a method used to vary the average current induced in a coil using a square wave of fixed frequency, and variable ratios of on/off times.

Dither is a method used to reduce hysteresis by applying a square or triangle wave to the coil voltage. It can be applied to straight DC or PWM.

Maximum Control Current is the point where increasing current input no longer results in an increase in regulated hydraulic parameter (flow / pressure).

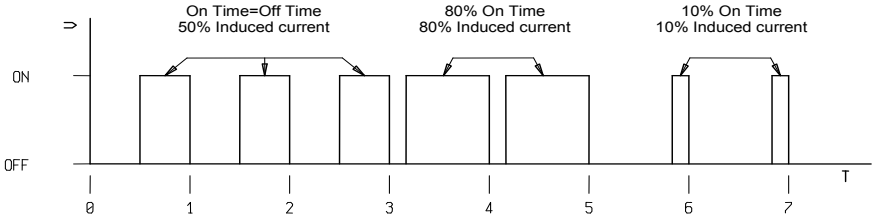
I-Min and I-Max represent the minimum and maximum control current induced into a proportional valve coil. The tolerance allowed is ± 10 % and depends largely from coil´s resistance tolerance.

Ramping is the ability to control the rate of change of the output of an electronic controller.

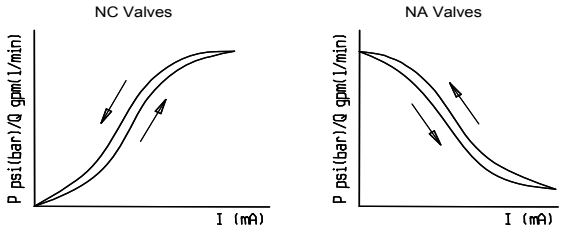
VERY IMPORTANT:

a. It is strongly recommended to use pulse-width-modulation (PWM) as input signal to coils rather than straight DC. Our tests indicate that PWM input signal allows best valve performance, significantly reducing hysteresis and response times of all our proportional valves. All features shown and explained in next pages are available from many industry-common electronic controllers, including Proportional Controllers described in this catalogue.
b. CH recommends to use always 12 V DC coils in combination with 24 V DC supply voltage to the electronic controller. This allows to use a much wider control current range independently from coil temperature, since anyway current is regulated by the electronic controller and there is no coil overheating risk.

PULSE WIDTH MODULATION

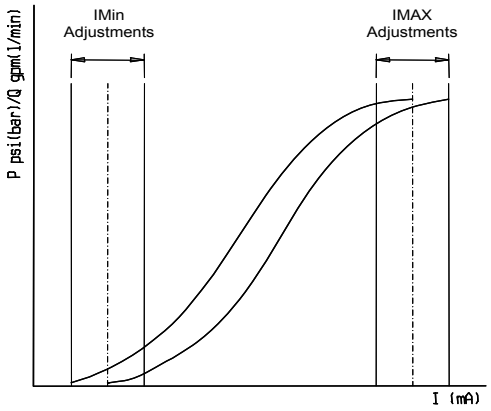


HYSTERESIS CHARACTERISTIC WITH 120 Hz PWM



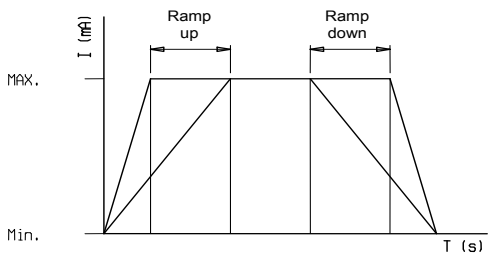
For normally closed proportional valves, the hysteresis curve with increasing current is always lower than the curve with decreasing current.
The opposite is true for normally open proportional valves as shown.

REPEATABILITY RANGE



An important control feature of electronic controllers is I-Min / I-Max adjustment.
This feature allows control of the regulated hydraulic parameter across the full range of the electronic controller by eliminating deadband.

RAMP SLOPE CONTROL



Many commercially available controllers also offer a ramping control feature.
This feature allows to adjust the current rate of change between the I-Min and I-Max setpoints.

13. **European machine directive 2006/42/CE**
